“I finally understood the meaning of my existence.”

Sorry, I have not yet presented myself. I am Giuseppe Lanotte, factory manager of the Keshe Foundation Italy which today represents an international reference point for the development of new scientific knowledge, technologies and solutions to the main global problems such as famine, lack of water, lack of electricity, climate change and diseases.

Before joining the Foundation, I have always promised to myself that I wanted to do something big and essential for humanity to payback the miracle I have received. I never thought I could be so deeply involved in something that really is changing the history.

When I first came into the foundation for obvious reasons in 2016, I immediately felt a sense of love and welcomed from Mr. Keshe, Caroline and the rest of the team who patiently taught me how to take the first steps.

I was never treated and never felt like a normal employee, but part of a big family going to the same direction.

One thing that mostly left me speechless is that Mr Keshe, prefers to have lunch break with his team without creating the wall between employee and employer. All these aspects contribute to making the workplace positive and increasing productivity, with beneficial consequences for the whole team.

“After recovering from an 8 months coma caused by a bad car accident, I finally understood the meaning of my existence.”

In the hot summer of 2017, I was put at the helm of this spaceship flanked by Giovanni Lapadula and Raffaele Patella and since then, we never stopped thinking, solving, studying, and producing what is best for humanity most of which concern our health which I think it is the most urgent sector to solve on the planet.

Everyday we imagine, we think of people, and we develop the ideas that seem best and combine plasma technology with daily use products such as: Plasma Eye and Migraine Masks, Plasma Insoles, Plasma T-Shirts, Plasma Hand Soap, the Magrav Alkalizer and Energizer, and soon we will also offer new solutions in the organic and vegan sector like shampoo and gel sanitizing which will join the historical and timeless Pain Pen and Pain Pad.

As initially implied, this is not about selling products and waiting for a compensation, but it is about changing the life of humanity, the world, and its history, and this gratifies us. Entering people's homes changing the fields around the environment with our products and knowing that who is using them is receiving benefits is for us the best compensation ever.

This technology, is great even now that is

still at the beginning and we can only imagine what will come next considering that this technology represents a radical development for broad-spectrum well-being and that the interlocutor to whom we address is always the same:

The whole world.

UPDATES FROM CHINESE RESEARCH TEAM

Harmonize the fields as One Planet, One Nation, One Race

On 14th of July an important message from Mehran T. Keshe was sent to all Knowledge Seekers around the world:

“Would like to ask for all those around the world who have a dynamic star formation to run them from Monday 6 AM CST (China Standard Time) UTC+8 or from 00:00 CEST which is exact midnight between Sunday and Monday [16th of July] by time in Rome, Italy.

We are going for the test of space lift and motion in China from that time and need to harmonize the fields. This will be like when we stopped the motor in Italy and when we achieved 129 Tesla. We need the collective consciousness of the mankind of the change to come. And that we collectively make the effort and support Chinese team.”

Every team has put their star formations in function at exactly same time and keeps them active since, with one purpose: joining their souls as one nation to bring advancement to human race. There are many ways you can step in as well, to harmonize the fields and embrace the change to come. With a star formation reactors system or with the soul interaction.

IS YOUR STAR FORMATION RUNNING?

Your intention, thoughts and love will elevate the soul of Man and together we will soon greet peacefully and in the ethos of Universal Community our friends from outer space.

Continuing the project, on 19th of July 2018 a live broadcast for the progress of the Chinese Keshe Foundation Research team has been shown, as a result of the collective consciousness.

“We are proud to announce that Keshe Foundation China spaceship team has managed to achieve plasma ignition and creation of motion of internal systems through free plasma production. We are recording voices of the system in trying to communicate.”

M. T. KESHE
Thursday, 19th of July 2018

THANK YOU FOR ALL YOUR SUPPORT AND COLLECTIVE WORK!

UPDATES FROM ARIZONA

by Jon Bliven

In Arizona it seems like the pace of activity has sped up. With each passing day our testing and understandings are stretched further. We have so many spinning reactors going at our factory that if you did not know what we are doing one might think we were nuts. Our belief in the technology and the work of the foundation keeps us moving continually forward. We have had a primary focus on trying different ways to capture or hold on to a neutron and then have that neutron interface with the reactors to open up the plasma field. This is how we are working to create a spaceship.

In addition to creating the free neutron we have been doing many experiments to create the crystallization structure with various GANS. This is where the salt-water environment is important in that much like a small cell the GANS can begin a growth of a crystal structure. Even within this structure of the various GANS, there are many forms crystal structures can take place and we hope in the future we can understand this better. The crystal structure even in the Nano state allows for the creator to infuse the material with a memory.

We must remember that the water can carry a memory also. We have created a carbon GANS with a crystalline structure and we have learned that this will be very useful with tomorrow's future communications. In the **231th knowledge seekers workshop** (<https://youtu.be/rxJpG60itow>) starting around 57 minutes we talk about the work we are doing. A little further along Mehran T. Keshe states:

”

This goes back to understanding the structure of the amino acids, where we talk about the carbon, hydrogen, nitrogen, and oxygen where oxygen is the gravitational field holding things together, where hydrogen is the energy supplier, nitrogen is bringing of the whole structure to be able to transfer, and carbon is the link of the connections between all the elements. So if you go back in understanding this and understanding that if you have, as you said the amino acid or the amino acid of the physicality of the man added to this process then existence and the presence of the carbon crystals is part of the communication lines between the captain and the man who controls and the energy production. The existence of these crystals initially and from the beginning was set out for this effect. [...] Carbon crystals is the current connection between the cells. [...] It is the remote-control connection and it is instantaneous. [...] These carbon crystals in the plasma condition are [...] part of your Zero-time communication.

We also started looking into water purification devices using plasma balls to structure the memory of the water as well as purify the waters. We used plasma balls configured in a double starship configuration to restructure and energize the water. Preliminary testing looks encouraging, but we still have a way to go. See video here of our test model <https://youtu.be/xD1f-88Ijv4> and a second where we increase the surface tension of the water to allow a copper wire to float on the top of the water. https://youtu.be/tAnWHBOXF_A

It is interesting to note that all our gans that we created also has this surface tension to float a small wire. This helps validate the addition and benefits of adding CO2 gans water to assist river water.

When the surface tension of the water is increased the water can allow the healing energies of the sun and the atmosphere to oxygenate the water and the memory of the water helps assist other molecules in the river to also change.

We know that there are many ways coming forward with the technology to correct many challenges facing our world. It is our hope that we can best use the technology to create the best solutions that will be of the biggest benefit for all. The spaceship will open many doors and we continue to actively pursue a solution.

END OF 2nd TRIMESTER

27th July 2018

A big THANK YOU to all you wonderful Knowledge Seekers around the World!

- We have come far – with many ups and downs.
- We achieved more awareness - to what global peace really means to us.
- We found love & friendship - towards each other and ourselves.
- We are on the road to discover our Souls and our connection to everything around us.
- We support and encourage each other in our studies and experiments.
- We realize that we are still learning: to accept each other, evolve our Souls and forgive mistakes.

THANK YOU to all beautiful students of the Keshe Foundation Spaceship Institute!

We can be proud of ourselves and all we have given during this last trimester, “like a single cell within an even bigger entity” we achieved so much:

- The numbers of students who became class teachers in different languages has increased.
- The numbers of active and acknowledged workshop teachers has increased.
- The distribution team is being looked after and been given advice beautifully.
- Dedicated transcribers and translators have given their time and love to spread the knowledge.
- Knowledge Seekers have been sharing their amazing experiences and testimonials.
- New students found their courage to speak and get involved in many tasks.
- Presentations to help Understanding Plasma Science were wonderfully created.
- Public & private classes were held every week by amazing teachers in: Bengali, English, French, German, Hungarian, Romanian, Polish and Spanish. Plus many other workshops took place in additional languages.
- Video presentations were beautifully created to deepen the understanding of knowledge.
- Hosting & co-hosting, weekly scheduling, background IT, management team, administration, public relationship, manufacturing and development projects have been working on improving a smoother flow.

“We are all here to serve” - it takes time to learn but we are successful at the end! So please use the semester break to let the seed of acquired knowledge sink in – and let it come to blossom in our next trimester.

We are the Keshe Foundation – let’s add to it and see what this flower can grow into. Much love to everyone! See you in a bit!

Next trimester starts on:
SEPTEMBER 17th, 2018

The Keshe Foundation offers its space health technology

One of the aims of the Keshe Foundation is to enable Mankind to travel into and survive in Deep Space. A major part of any space program is concerned with maintaining a good health condition of passengers. The passengers of future interplanetary, interstellar and intergalactic space travels cannot be left for months and years without means to restore health eventually damaged by illnesses or accidents.

Due to the limited transportable volume of cargo and personnel on spaceships, it will be not practical to use conventional health care methods, which require a large number teams of specialized medical doctors and assistants, along with special equipment and inventories of diagnostic apparatus, surgical equipment and thousands of kinds of medicines in form of liquids, injections and tablets.

Therefore the Keshe Foundation has set-out to develop, produce and test new systems to understand and bring forward a new science for recovery from of all ailments through one common system, which system operates in a similar manner to the operation of the human body that in the future one system can be used aboard these crafts to retrieve man of space from various ailments.

PLASMA BALL UNIT IS NOW AVAILABLE

The Plasma Ball Unit is built out of high quality materials and can be utilized very flexibly. By the use of articulated arms, mounted on a castored* frame assembly, every shielded motor can be moved freely in all directions, therefore, a lot of formations can be applied in a way to include every part of the body, and create different types of concentrated fields (which formations were developed by Mehran Tavakoli Keshe and a number of well-known Knowledge Seekers). Materials used for the PBU are laser cut and powder coated stainless steel for the base-frame, on which are fixed three stainless steel sockets for the carbon fibre rods. On these vertical carbon fibre rods are mounted the articulated carbon fibre arms, which can be moved freely.

At one castored frame, maximum 8 articulated arms can be mounted, and two additional frames can be placed opposite each other, and be connected by 2.5m carbon fibre rods to move several articulated arms along a lying body. Furthermore, supplementary castored frames are available too, on which can be mounted articulated arms, as well as a controller for 8 motors.

as a basic environment for processing and further focusing on specific parts of the body of a human being or an animal. Furthermore, the created fields support heavily to connect with the soul of the people inside the unit and therefore gives a boost in processing for all people involved, therefore the unit can also be seen as a training unit for space technology. The way how to use the Plasma Ball Unit and protocols for specific cases can be developed in the medical teaching of the Keshe Foundation (to apply, write an email to doctors@keshefoundation.org).

The Plasma Ball Unit is CE certified Medical Type I and is delivered as a kit. Most of the components are pre-assembled; assembling the unit takes maximum 15 minutes. For further questions or tailor made solutions please contact the team of Keshe Foundation.

The development of Keshe Plasma devices and improvement of existing devices has resulted in many different plasma device types within the Keshe Foundation inventory. One of these devices is the Plasma Ball Unit (PBU). The PBU mainly consists of several spheres (balls), which are mounted on motors (dynamic systems) and therefore rotate at certain speeds. Inside the balls, different types of GANsEs in different physical states (liquid, paste, dry powder) can be placed. A combination of different types of GANsEs (field spectra) is used and concentrated in order to balance the fields and further the matter (e.g. from within the organs) of the body of a human being or an animal.

The plasmatic fields inside the Plasma Ball Unit are well-known and frequently used

GLOSSARY

*Castored = provided with castor wheels

Castor wheel = A wheel that can pivot but is not intended to govern the driving direction

wonderful person like you. Myself and all the other workers
wish you a happy and a blessed birthday. Happy birthday to
you, Mr Keshe. May all your wishes come true.

KF POLAND

A BEAUTIFUL JOURNEY OF KNOWLEDGE EXCHANGE
by the teachers of the Keshe Foundation Poland

/ INTRODUCTION

The Keshe Foundation Poland was informally established by Paweł and Marcin in December/January of 2015/2016. Since then the team has grown and now includes three teachers and tens of private students. Based on the momentum of publicity about Ing. Mehran Keshe's teachings and the simultaneous release of the Magrav blueprint for humanity, a group of people looking for confirmation of the veracity of their thinking and implementation of this device, very quickly gathered together. Initially, the exchange of views and presentation of the different implementations and understandings of the blueprint started amongst the group of 15 Knowledge Seekers via the Google Hangouts platform. After some time, thanks to the Keshe Foundation, we discovered the Zoom platform, which has broadened our presentation and educational abilities. At the same time, we started inviting some wonderful people from the circles of the Keshe Foundation, who in a beautiful and open way presented their understanding and showed that this knowledge is known and recognized internationally amongst different cultures.

Thanks to the support of many Knowledge Seekers, we understood that

behind the Magrav unit sits a very deep understanding of the creation and transmutation of fields, and hence the first Magravs from leaves and roots were assembled. This understanding and the open sharing of knowledge by the Foundation highlighted the lack and the need for translations, so that the physicality of those who do not understand English could enjoy the beauty of such wonderful knowledge. As a result, we started to work on forming a group of translators and correctors. This group of 6-10 people continues to work with great dedication and concern for others, by regularly releasing translations and transcriptions which support our weekly teachings, website and other areas. Thanks to the openness of the Foundation and its support on many levels, we reached a point where we found strength and courage to become a part of its educational team. This was somehow a result of the open invitation issued by the KF to all those who wanted to become a part of it, during one of the Knowledge Seekers Workshops. Since then a beautiful journey of knowledge exchange started via the Zoom platform provided by the KF, for which we are extremely grateful.

The team is focused on a number of initiatives to facilitate free sharing of the Plasma Science, some of which are presented in this article. At the core sit

both online and face-to-face teachings backed up by online presence through our website and Facebook pages. Our mission is to spread the knowledge unconditionally and help others gain easy access to the original educational materials through the effort of translations, video transcriptions and provision of a website (<http://kfssi.edu.pl>). We are very pleased and honoured to be part of the Keshe Foundation family in the great mission of bringing Peace to this planet and taking man into the space.

/ TEACHINGS

The team of students, teachers and other Knowledge Seekers meets twice a week, on Thursdays and Sundays at 21:00 CET, in the public teachings (zoom id: 756-427-144). Teachings typically last 2 hours and discussions are mostly based around the translation of fragments of the recent Knowledge Seekers Workshops by Mr Keshe. Recordings of these sessions are typically available on the following day through the official **KFSSI channel** on Youtube under the **Public Teachings in Polish – Nauki publiczne w języku polskim** playlist. Translated material that is a subject of each teaching, is also made available through the **KFSSI Polska** Youtube channel which contains a number of playlists.

Private teaching take place on Mondays, 21:00 CET on zoom id 949-559-976. In these sessions we follow the same style of teaching, by firstly presenting a subtitled part of a selected private teaching by Mr. Keshe and then discussing fragments of the teaching. Recordings of these meetings are available online to the registered students through the **Keshe Foundation education portal**.

Affiliated group of experienced Knowledge Seekers runs regular public meetings during which Knowledge Seekers provide testimonials, exchange ideas and experiences. If you struggle to understand some basic concepts or need practical advice on how to nano-coat various materials or produce certain GANs or plasma devices, Technologia Plazmowa meets every Friday at 22:00 CET (zoom id: 933-933-9399).

Plasma Consultation sessions are also available on demand to the public - after sending an expression of interest to **technologiaplazmowakonsultacje@gmail.com**. These sessions run every Wednesday between 21:00-23:00 CET (zoom id: 971-575-7040).

Teachers of the Polish group also collaborate in the private and public teachings in English.

WORKSHOPS AND CONFERENCES

The first Polish conference on Keshe's Plasma Technology took place in April 2017 in Skaryszew, Poland. Attended by over 140 participants this event attracted substantial attention and was very well received. Organized in-line with the ethos of the KF family, the 3-day participation in the conference was fairly inexpensive (around 40 euros in total). Each participant received singing and round magnets, small amounts of CO₂, CuO and CH₃ GANs and promotional materials (cup, pen, stickers) in their participant's pack. All income generated through this event (nearly 2000 euros) was transferred to the Keshe Foundation to support the development of the research centre in Ghana. During these 3 days Keshe Foundation students and teachers gave talks and presentations on various topics related to the Plasma Technology. Plasma coil units and other plasma devices were available free of charge for conference participants to use across all three days.

On the last day participants were presented with a freshly released, subtitled video of the **Cancer solution in exchange for peace**, which received a lot of interest. Some recordings from the conference are available online on the **KFSSI Polska** Youtube channel.

Public engagement activities in Poland continue in the form of face-to-face workshops. To date, the team of accredited teachers successfully run two workshops - both took place in 2018 in Gdynia, Poland. We appreciate that for many people this technology remains a **mystery** as it is silenced by the national media. Therefore, it is crucial to reach out to people and teach them the very basics of the Plasma Science. Nano-coating, gans production and practical applications of this technology were at the core of both workshops. Detailed presentation of their programme took place in the 46th One Nation One Planet One Race for World Peace. All thought in the atmosphere of correct ethos, emphasizing the role of emotions and intentions in this technology. The family of Knowledge Seekers is growing faster than ever!

BLUEPRINT FOR PEACE

The blueprint for peace for humanity was a turning point for the whole of the humanity. During that month of everyday teachings we all went deeper in the field strength towards the direction of our Soul and the Soul of the planet Earth. A new understanding, huge amount of knowledge and a tremendous effort to unite the entire planet opened the gates of Peace. We felt that not a single Polish speaking person should miss out on this opportunity and throughout the month of July, on daily basis without missing a single day, the team of Knowledge Seekers presented summaries of AM and PM teachings and subtitled portions of their recordings. The blueprint month finished with the **signing of the World Peace Treaty**. Countless number of invitations for this event were sent to the Polish president and prime minister. Soon after the blueprint was over, the Earth Council released **The Constitution of the Blue Planet Earth** now available in many different languages, including Polish. This month we celebrate the first anniversary of the signing of the World Peace Treaty by all the languages of the Earth. The collective's first steps to reach

out to the Universal Community were made exactly 1 year ago and we can observe huge changes around us. The amount of violence and new conflicts dropped down significantly and many world leaders realized the power of this technology and the benefits of Peace.

SOCIAL MEDIA

KF Poland is present on social media mainly through the Facebook platform. The official KF page for this language is called the **Keshe Fundacja Polska (KF Polish official)**. By joining this group you will get the latest updates in the areas of teachings, workshops and youtube recordings, as well the ability to participate in discussions and to add to the knowledge.

HEALTH

The health team in Poland now has one medical doctor and one naturopath with further doctors' applications pending. Doctors who need supplies of various GANs, but lack time or expertise to produce them, are supplied by the students. One of the private students has even donated a **Plasma Coil Unit** for the doctor to use in their practise. Medical research continues in different directions, outcomes of which will soon be presented in the **KF Plasma Scientific Journal**.

Schematic View of Plasma Coil Unit. Source: Keshe Foundation, 2016

/ AGRICULTURE

Last year was plentiful in many events related to plasma technology, which positioned us and focused our efforts on several new strands of work. Nevertheless, the perspective of using plasma technology in agriculture was not pushed aside completely. In 2017, many people throughout the country spilled plasma water into water tanks, rivers, ponds and lakes, which certainly influenced not only the nearby crops but also the entire environment. There were also some interesting experiments and observations, the first of which is a cherry tree which, due to the late frosts, completely dropped its flowers. After spraying the plant and thorough watering of its root system with CO₂ plasma water, the tree blossomed again and consequently gave fruits. Pictures of this tree are available [here](https://www.facebook.com/Kfssi/photos/a.990481504406575.1073741828.990399577748101/1315575078563881/?type=3&theater). (<https://www.facebook.com/Kfssi/photos/a.990481504406575.1073741828.990399577748101/1315575078563881/?type=3&theater>)

At the same time, due to frost, damage was made to a blackcurrant plantation. The owner of the field stated that due to its age the whole plantation was suitable for liquidation. Containers with plasma water were dug into the ground in the field. However, this action was taken too late for the currant to bloom again. As it turned out, at the end of the season the owner of the plantation stated that the plants are strong and healthy enough to keep growing for several consecutive seasons. In 2018, the currant bloomed beautifully and gave a large yield. However, due to the low cost of fruit purchase and low profitability of the harvest, the fruits were not picked up. Currently, farmers strike in Poland due to the low profitability of soft fruit harvest.

Another example was the cultivation of maize on one of the fields in the Lublin region. One farmer dug 7 bottles of liquid plasma into one of his fields (6 in a circle and one centrally in the middle) on a growing corn plantation. After a few weeks, the corn inside the circle was about 20 cm lower than the remaining part of the plantation, but by the time of harvest it levelled in height to the rest of the sown maize. Interestingly, just before the harvest, a herd of wild boars entered the field trampling and eating all the crops. However, inside the area where the bottles with liquid plasma were dug in

and about 10 m around it, the corn remained untouched. Does this sound familiar? This is somewhat reminiscent of the plasma bubble around Tom Salas' garden in Dominican Republic.

Arrangements are made for next year to use the plasma technology for the cultivation of hemp plants. A report from this initiative will be made next year.

/ EMOTIONS

A few months after the Magrav blueprint, in a small but open circle, we came to an understanding, that emotions and its functioning is an amazing educational and creative tool, so we started to work with it, carrying out a number of interesting experiments. Our openness in sharing with each other without hiding anything, every element of the new understanding, led us to the position in which we started to work with non-tangible reactors. This allowed us to touch on - in the way not yet understood by us entirely - new, different capabilities that are fully explained in a scientific and logical way through the work of magnetic plasma fields. This in turn allowed us to observe the next stages of the development of the structure of emotions and building confidence in ourselves, by ourselves - what we later called the banking process. Thanks to this process of increasing the plasmatic current and the simultaneous development of knowledge by the greatest teacher of all time - Mr Keshe; we started to work with others, educating each other both in physicality as well as in the dimension of the fields, heading more towards the understanding of the working of the fields. This experiment showed us that knowledge/understanding is a field strength of emotions and in its propagation factors such as time and space do not matter. Thanks to this understanding, in May this year, we decided to start a new project, which we called the School of Emotions. In this school, we learn from each other different relations between the fields by discovering and differentiating between the work of different non-tangible reactors. This is done non-verbally through the system of non-tangible, spinning star formations. This project aims to recognize and gain a greater understanding of the creation by working through the dimensions of our miraculous bodies and its dimension of the magnetic field strength. The project is completely free, open to everyone with

meetings taking place biweekly, on Tuesdays and Fridays at 22:00 CET on the Zoom platform (zoom id: 834-224-6046).

/ FUTURE INITIATIVES

The unconditional serving continues in the aforementioned areas and flowers in other, such as the **Keshe Foundation Wiki**. The translation of the wiki into Polish started recently and volunteers to help in this and other efforts are always more than welcomed. Whether you are familiar with the English language or not we could use any help in many different areas, including but not limited to graphics design, proofreading, social medial posting, etc. You can reach us either through the Universal Council representative's email uc.polish@theuniversalcouncil.org.

Further workshops and conferences are also being planned and organized, with the next workshop taking place on **Saturday 8th of September** - venue to be decided.

Gravitational - Magnetic BATTERY

OBJECTIVE

Gravitational - Magnetic Battery, made by D. I., fifth grade schoolboy at I.D, Sirbu of Petrița, Hunedoara county, Romania. Presented at the Minitehnicus County Contest, organized at the Children's Club in Petrosani on 9th June 2018.

METHOD

Copper wire 2,5 mm nanocoated with flame 4 times.

GANS used: 10 ml GANS mix - 40% CH₃, 18% CO₂, 18% ZnO, 18% CuO.

PREPARATION

Classic GANS made with led connection and nano coils covered by the flame method and 10% salts.

SETUP

We used a 9cm nanocoated copper wire that was rolled over a paper towel that had a mix of GANSes. We wrapped the paper napkin with a 28cm long and 7cm wide aluminum foil, to which we bent 1cm (from the

end). Aluminum overwrap was 9 turns in anti-clockwise direction with 2cm zinc wire springs.

APPLICATION

This battery was tested at the Minitehnicus contest on 9th June 2018 in Petrosani, Romania.

OBSERVATIONS

After this plasma battery was developed, a procedure to improve the result was found by replacing the paper briefcase with cotton disks.

RESULTS

The Minitehnicus contest committee measured the battery with a multimeter and the registered value was 0.64V. The responsible student received the diploma of the 1st place.

REFERENCE

We mention that D. I. requested to be educated with the information from the plasma science and participated in the theoretical and practical

workshops that were made by the members of Plasma Hunedoara Study Group, the Local Laboratory in Petrița, coordinated by Giani Marin Boia and Pelecaci Georgeta Emilia, who are preparing 3 high school persons for Vietnamese lab competitions, along with Physics teacher Cindea Nicoleta from Constantin Brancusi Technical College in Petrița. This project is carried out in collaboration between the "Constantin Brancusi" Technical College in Petrița, with the support of the Plasma Romania Scientific Association and the Keshe Romania Association, and National Institute for Research Development for Mining Security and Explosive Protection. Thank you, Mr. Keshe!

ALS - A DEATH WISH THAT COMES TRUE

This paper was written and published by Mehran Tavakoli Keshe, founder of the Keshe Foundation, on 25.9.2013.

[...] With the release of this paper Stichting the Keshe Foundation for the first time in its history opens the doors of its research to the public for a glimpse into one of its most closely guarded research programs. [...]

We have developed the health section of our spaceship program because we believe the spacecraft of the future will not be able to carry all the medicines and doctors of every discipline required to cover all aspects of the health needs of people in long-haul deep space travels. In order to meet every eventual medical need there would be more medicine than food and more doctors than passengers on board these craft.

/ An insight into the principles by which the Keshe Foundation designs and operates its body resetting systems

In our work we consider the plasmatic structure of the elements and the interaction of the Magnetical and gravitational fields of these elements in the human body. We consider not only the physical method of connection and communication between different parts of the body, but we look at the invisible connection and interactions of magnetic fields and gravitational fields of the matters of the elements or organs in the body relative to each other. This invisible but real interaction of different parts of the body is one reason why the world of medicine has such a hard time at present curing most ailments.

We consider the human body to be like a galaxy in the universe, with all its physical entities and the hidden and invisible interactions and connections of its magnetic and gravitational fields (Magravs) forces. In a galaxy there are visible stars and planets and at the same time these have invisible Magravs connections between all their parts and with each other. [...]

/ New fundamental criteria used in application to health [...]

From our research we can with confidence state that amyotrophic lateral sclerosis is a reversible condition, if it is discovered at the right time and handled in the right way by a competent team of physicians. In view of our development of plasma technology and its applications, amyotrophic lateral sclerosis should no longer be a death sentence handed out by

doctors, who tell their patients in the same breath that there is nothing that can be done to save their life as the present world of science has no cure for this killing disease. The present medical world cannot explain the origin of amyotrophic lateral sclerosis or what triggers this process in the human body. [...]

We have been striving to understand why the body puts itself through this horrendous process of amyotrophic lateral sclerosis that brings about its death. We see this as one of the illnesses most likely to occur in space when people are away from home and unknowingly can trigger such a process through depression or loneliness during long periods of being away from loved ones.

For the process to start, it requires two psychological trigger points during the life of the patient. One such event may take place in the early years or in the teenager phase and then for the illness to show itself outwardly, a second trigger point is needed. This can take place in the early twenties or in later years, causing the recurrence of the same feeling as in the first trigger point. [...]

The point that has not been understood up to now is that most carbons are of diamond structure and the information received by the carbon through a given channel for a matter of a microsecond changes the characteristic of the carbon structure of the amino acid to given resistor strength level or to a given carbon structure of graphite atomic form as the carbon needs to be for a given current level of the information received from the brain for given retraction or reflex. In This process causes the potassium of the electro-motoric junction valve to be changed into insulating mode or disconnection mode, keeping the insulator crystal structure. [...]

In the case of amyotrophic lateral sclerosis for example in the electro-motoric junction of the fibres, both the lines of the electric and the emotional fields operate simultaneously, with the potassium functioning to contract the fibre while the sodium process retracts or opens the fibre, which needs the lesser force. In the motoric operation, the potassium releases stronger fields and so it commands a stronger and longer contraction, as when a man needs to hold onto a bar to save himself from falling, while to open the same fingers the muscles use partly the reflex and partly a small amount of energy to allow the fibre to relax, which is done by the sodium magnetic field release. [...]

Amyotrophic lateral sclerosis is not the work of one doctor; it needs a good dedicated team of physicians, psychologists, nutritionist, kinesiologist and neuro-tissue specialist to be there in every stage of development of the process and progress with the patient. Reversing amyotrophic lateral sclerosis and multiple sclerosis requires a caring and dedicated team if the case is to be successful in all aspects. [...]

Wisdom gained

From our research into the cases of amyotrophic lateral sclerosis over the years and our understanding of how this process starts in the human body, we have called this illness the death wish that comes true. The affected person has unknowingly through two different but similar emotional situations in two different stages of their lives wished they were dead, and then when their wish comes true they have to complete their unconscious desire through such a traumatically slow and painful death. The patient himself triggers the physical death-code of his own body. [...]

In all aspect of physics and the world of science man always has looked for the physical connection between the parts of the human body and has forgotten or never understood that as the human body is made of the plasma of protons and electrons and plasmas of all the atoms in the molecules of amino acid, these plasmas irradiate Magravs and receive Magravs of other cells, so they do not need a physical connection to interact and affect each other's performance.

Amyotrophic Lateral Sclerosis:

The process starts by the person wishing to be dead, and progresses through paralysis and silence to eventual death. Now with the new plasma technology developed by the Keshe Foundation and as we have seen with this case and a number of other cases around the world we can say with confidence:

”

We have enough knowledge now to start to reverse the process of amyotrophic lateral sclerosis in the human body psychologically, and then the body will reverse the physical damage by itself.

On behalf of the Keshe Foundation **M.T. Keshe**, Director of Stichting the Keshe Foundation Spaceship technology in the service of humanity.

THE PLEASURE OF TRANSCRIBING M.T. KESHE'S TEACHINGS

by Doug MacDonald

One of the ways M.T. Keshe delivers his teachings to the world is through the Knowledge Seekers Workshops. He speaks, without a script, directly from his Soul.

In doing so, he has fast tracked mankind's understanding of every aspect of his existence, many thousands of years ahead of what we thought we knew. Each spoken word in these workshops is a valuable gem, serving to collectively bring enlightenment to humanity, knowingly or unknowingly. It's Soul to Soul communication, at it's best.

The most amazing thing, to me, about transcribing and editing these subtitles, is realising the deep connection that occurs between all Knowledge Seeker's involved in this process, on a Soul level.

Transcribing subtitles is exactly like weaving a beautiful Persian Rug. Every single knot (sound bite) has to be carefully tied into the base fabric (the video recording). It takes time, patience and extraordinary concentration to keep every knot in correct colour and position. The end result is a priceless and beautiful creation for the pleasure of future generations. It's a very fine art, indeed. No amount of value can be placed upon this work. It is priceless service.

It comes from a deep desire within to help others understand the true beauty of giving enlightenment unconditionally, without desire for return. But the amazing reward, that comes as a result, is ever more enlightenment. Which is the only true reward in creation.

Transcribing subtitles is not everyone's cup of tea, but I humbly recommend giving it a go, if you feel inclined. The more, the merrier. There are thousands of hours of recorded teachings still remaining to be worked on and only a relatively few dedicated Souls, at the moment, doing this important service.

A special thanks to all the team who have welcomed me so warmly into their midst. And I'm here to stay.

**Your Servant,
Doug MacDonald**

For those willing to join the transcribers team, please e-mail us at:
subtitles@kfssi.org

Private teachings

are usually held at 2pm & 5pm CEST
(Central European Summertime)

Topics during this 2nd Trimester included for example:

- **Basic introduction series to Plasma Technology,**
 - **Soul teaching series,**
 - **Training classes for future teachers,**
 - **Playing with Plasma Fields**
- and many more.

The 3rd Trimester is approaching.

Existing class recordings of M.T. Keshe are being reviewed and new ways of understanding the Plasma Technology are being discussed during class.

Experiments and experiences are being shared between students via private student chats.

MOONLIGHT PACKAGE

ORDER IN VALUE OF
€1,500
AND RECEIVE FREE

1 x Plasma Eye & Migraine Mask

1 x CO2 Kit

1 x GANS Bulb Humidifier

1 x bottle of Plasma Hand Soap

Equals
10% OF
ORDER VALUE
IN PRODUCTS
VAT & shipping
Included

SUNSHINE PACKAGE

ORDER IN VALUE OF
€2,000
AND RECEIVE FREE

1 x Plasma Kit for production of all GANS

1 x MAGRAV's Energizer & Alkalizer

1 x KFSSl Pain Pad

1 x KFSSl Pain Pen

9 x bottle of Plasma Hand Soap

1 x One Soul Plasma T-Shirt

Equals
25% OF
ORDER VALUE
IN PRODUCTS
VAT & shipping
Included

STARLIGHT PACKAGE

ORDER IN VALUE OF
€5,000
AND RECEIVE FREE

15 x Plasma Eye & Migraine Mask

10 x One Soul Plasma T-Shirt

1 x MAGRAV Power Unit

Equals
36% OF
ORDER VALUE
IN PRODUCTS
VAT & shipping
Included

Available on:
store.keshnefoundation.org/store

Promotion ends:
31.08.2018
