YOU ARE A

GALAXY

by Keshe Foundation

In the path of belief, it does not matter where we go or what we do, we find at the end of it that we all believe in one thing: man up to now has never been given the confidence that his inner being is the source of his own creation of the new dimension.

And in so many ways as we go over the past teachings of few weeks, we understand that even the physicality of the man from the dimension of the universe is the dimension of existence of the universe itself. The structure of the physicality of the body of man is more or less is another galaxy.

The soul is the sun in the center and the rest of the stars and moons and the dust in that process are part of this universe. If you look at it, in the solar system we have the Earth, the Sun, Jupiter and galaxies are of the same things so the body of the man as a galaxy has the liver, the kidney, the heart, all positioned in different places in the structure of it.

As we said micro is like macro and everything is the same. What we have taught in the past couple

of years and especially this year we can sum it up. We came towards one direction, we came towards in the unification of the soul of the man that we are all together unified as one soul. Collectively we make the soul of the creator and each one of us has a position in that structure of the life of the universe. We appear in different shapes or forms as planets, humans, animals, other creatures in the universe but in all, we are part of that body.

We are as the energy of the cell of a heart and then as the cycle of life of the cell finishes we become another part of the cell of the liver or we move to another dimension outside the body of the man, but we still exist nothing ever diminishes. The conservation of the Unified Field Theory confirms the existence of the life of the creator and not the man and this is a very important point for us to understand.

In the past year, past 12 months, we have moved a lot. We have moved the understanding and the revelation of the truth about the man by thousands of years in

past year. Understanding the position of the soul of man, understanding the operation of the soul in the dimension of physicality.

2018 has been closure for the past knowledge, for a past life of man on this planet and as has been promised will be the year of glorious time for humankind.

A lot of things have happened, and we learn from it. A lot of things will happen that we will come to learn from. There are several things which have happened in the past year and especially how we see it, how we do it and how we did things. Now we know the soul of the man is part of the body of the man, now we know the soul of the man is part of the soul of the Creator, now we know the totality of the whole life... what is going to happen with us, what we have understood and what will affect us it will be amazing. How we progress will be more different than what we had up to now.

256th Knowledge Seekers Workshop -
December 27, 2018
<https://youtu.be/AEsxieKL5a4?t=771>

"It is time for a change, to move into the real work of the universe. And it is time to understand that we use the matter state to reach the level of understanding of the soul of the man. Now you understand, maybe, why the creator has sent his messengers in the name of whatever you have had, is that they bring the ears, that it can be used when the time of the messiah comes. They can teach the soul and the message not to oppose. But by them understanding through those who have become messiahs to give from their souls to these to elevate, the job is made easy. The school is there, and the students are devotedly there. Then there won't be any fight between what they call the Muslims and the Christians. The lamb and the lion will eat and sleep in the same nest. The Christians and the Muslims will sleep and pray in a mosque, then the same church, in the name of their souls, not in the name of religion that is used to create so much conflict, for the benefit of those who were the hyper active children. The time has come. The time of change is here. And as I said, my wish is my command. If it is your wish to see peace, path of peace is made very clearly. It is the soul of collective awareness by giving, will create a position of change. No other thing. There is no pen in the soul of the man. And I am sure once you go into the Universal Community, you will never see anything written but the balance of the fields of the soul of the existence. Try to be humble enough not to become arrogant in the power that you have understood, and you possess. Otherwise, you will fall in the same path of the church and mosque. This is what we promised. And this is what we have delivered. We have to understand the operation of the soul, and we have to understand the soul of the man is a star in the cosmos of the universe. If we compare the soul of the man and many of us, seven billion, in one collection, Earth is like a galaxy with so many stars. When we look in the depth of the universe, we see galaxies with hundreds of millions of stars in it. So is the planet Earth. Carries seven billion beautiful stars, which are the soul of the man. Carries with it soul of so many trillions of animals, plants, and everything else. So, if you look, when someone who does not see the physicality of the Earth and its content, what do they see? They see a galaxy, with so many beautiful lights shining, each one according to their strength, each one according to their position. An infant has a beautiful soul. So, has the old man. To those who do not see the physical dimension of this planet, but they see the strength of the fields, we are clusters of stars. The human race, every single soul, no one from a distance sees that is the soul of a fisherman, that is the soul of the cosmologist, that is the soul of a president. They all shine irrespective of their physicality. This is the magic. This is what the new science has to bring to man. When we look through our soul we see nothing but the star in the other souls. And this is the break. This is the understanding. This is what all these teachings are about. Coming to mature to the next level, to understand in the deep space. The universe is the oyster for those souls who serve. Then man is ready to go into space. Then man is ready to become part of the Universal Community which has been promised. I never promised you heaven. I always promised you the elevation of the man to join the family. And now you have the key. It is you who has to open the door to understand if I can raise the soul of these people or millions of other souls, that the physical life on this planet changes, then I'm worthy to be part of the Universal Community. To be there to serve, to expand, to be there, to be part. That, in the cycle of life of universe, I become, in being part, I become part of the totality. When man reaches that point, a new dimension in the strength of the soul of the man will appear, which is beyond imagination of understanding of the physical life. It is the gate to the opening of the new life in a new dimension, which is beyond imagination or what you might call a new beginning, a new cycle. Which that cycle carries with itself the origin of the creation of life in the universe and the Unicos. It is the elevation of the soul to serve become the key not a throne of the physical life.

The time is right. The time has come for the man to go through this process.

6 PORTALS

THE GATEWAY TO THE UNIVERSAL COMMUNITY

by Keshe Foundation

<https://youtu.be/AEsxieKL5a4?t=1115>

“We promised you the unification of man with the Universal Community. This offer was officially made on 22nd of December 2018 to the Chinese government in a closed meeting and in so many ways for the first time we offered the nation an opening into space. We see the Chinese government as solid, a nation and a government we can rely on. On Saturday 22nd of December in Beijing, the offer was made directly to the Chinese government and this allows us to open a new channel.”

The first portal which is being promised to the Chinese will have a diameter of around ten meters. “If you go back to my teachings I have spoken many times about it. Now physically we deliver systems which create this condition. What this means if you remember we certainly make a fish tank that allows the condition of life for other members of the Universal Community to manifest themselves. This is not going to be an

easy job; the technology has been developed by the Keshe Foundation in parts, that now it can become collectively as one.” Within 2019 we will establish the first line of communication through the new technology.

“I have managed to make a compromise between the two sides of the man in the space. It has not been easy. Teaching in the depth of man to complete his knowledge in the matter states, taking him through the transition, but in the same time giving guarantees and assuring those of the Universal Community that these are not disobedient children they are just not mature enough. I have not overridden the Universal Community Council, but I have shown them there is always hope for different races in the universe. The persistence of teaching man has not been easy.

The persistence of teaching that the man understands it is a time for change has been very hard.”

“To be equal, the portal which we offered will be offered to three other nations. As you know we work on the star formation, we see the reasons for it, we understand the reason for it. The other nations which will receive the portal, which means access to Universal Community is the Iranian government; the third nation which will receive the portal which means in a way access to Universal Community but in the same time collectively is the nation of United States. This means in the space program Iran, China and the United States have to work hand in hand. We foresee, and we invited to see the fourth portal in the nation of Russia. The knowledge and depth of understanding of the work of the universe is an asset to such a coalition. We have brought the soul of understanding of the space as we say the free space through the nation of Brazil. Brazil will become another portal in the dimension of the space technology which will be given the totality of

the knowledge. Some of you were wondering why we have gone through education and university education very close collective work with nation of Brazil in the past year. Maybe now you understand. Brazil has been extensively developing the space program in the background in a private and public or what you call black box investments through the time of the Germans when they moved to South America. Technologies very developed and it is the way it unifies the two parts of this planet. We need always to bring a nation in a position that is hope and give hope to its citizens, for this reason, we see a portal for the nation of India and this completes the totality of our work.”

People are hungry for change, people are hungry for a new dimension.

Why we decided to participate, not to interfere was because the knowledge of man in the matter state was becoming too scattered in too many different directions from the same thing. It had to be brought up to a focus and then to develop. Very much how you meet in management meetings, the soul of the Universal Coordinators, we are meant as Universal Messengers, it is the same. Everything is considered for the betterment unconditionally.

“What is important and why we have arranged the organization of the portals is very simple. Man needs to understand who the other part is at the party before he attends a meeting. What this means human race has to come to understand and see for the first time clearly without any hesitation the existence of others in the universe.”

We always guessed. This time it will be for us to join the Universal Community. We will see the members of the parties at least. As we make these portals. the gateways to the Universal Community, we are allowed to interact within a confined space where we feel safe and they feel safe. We create a condition of manifestation of those who are in touch with us, have been among us, but this time in an orderly manner.

“We never promise you heaven, but we promised you the unification of man in Universal Community and we think that mankind has reached to that point that it's time to open the doors.”

By opening these portals, we start the first stages of interaction interface between mankind and the members of Universal Community. We see the maturity of the man in what we have seen in the past decades not in the past few years. “I always say when we see one understands, we teach that part and two nations have understood and so it is time to enlighten and mature the knowledge. It is not going to be an easy trip. “

“When we sit as part of the creation and creator and we make a decision for totality because once we let you lose in the Universal Community what you get access to a pure toy shop. We are opening to mankind beyond imagination “Disneyworld”, you get to ride on every ride in the universe. We do not want you to harm yourselves in so many ways the scale is so huge you have to be educated knowledgeable and

at the same time it has to be done in a very short time, but we have to get the elements of the warmongering destruction of the man.”

“If we allow the Europeans with the mentality they have had to conquer and become part of what they did in Africa and the rest of the world we invite more

problems, we invite huge problems, and this cannot be part of this cycle. There is no colonialism, we do not allow anyone to be colonized or to become a colony of the other.” The white race of Europe has been the cause of many problems of the recent past and it seems they have not learned so we bring the collective peaceful nations like Iran with 300 years of no entering in any war, like Chinese who

understand the relationship between the two sides, the Russian understanding of the friendship, unity, and peace and in so many ways by allowing India we bring the old cultures of mankind together.

If you look in the totality of the six nations, it will represent more than 50% of the world population which

units, but it is to plan for the future that the entire human race simultaneously and collectively understands.

The teaching program to be able to do such a thing in a very simple way and has taken shape in the background in KF SSI Education. The university graduation work of the Keshe Foundation has been structured and has been planned for the universities in Brazil from March of this year." It is the time when we start educating not just in Brazil but across this planet."

"We respect the nation of China and I have spent a lot of time in the past couple of years to make sure the ground for such a meeting is set. What does this mean? The clean and correct the environment for the creation of portals. What does it mean that we meet in that condition? The members of the Earth Council will be present at every point of these interactions.

The six members of the Earth Council have the responsibility for one portal each and this will be shown and now you understand why."

Collectively the Earth Council will decide on the next steps in the interaction and collectively in sharing with the six nations and six portals, we transfer knowledge which is appropriate to be understood. The human race has a diversity of cultures and understanding, and all these have to be respected. We cannot change the culture of thousands of years in one year. "It is the responsibility of people like Dr. Parviz who understand the culture

as a member of the Earth Council to transfer that knowledge to the Islamic world, that we respect, and we honor but mankind has moved and has to move to the next step. Training and bringing understanding to 'many tribes'-man is not easy."

"Some of you might ask why not Africa and why not Australia. Collectively as a group, we have chosen to bring the essence of Africa as a motherland. It is its children who have to take the knowledge back to the continent of Africa."

It becomes the responsibility of these Six Nations to confer and confirm on their citizens that they are all one, irrespective of what we see. Let us look at the beauty of our path of beliefs and not what creates separation and conflict. The universal community will make facilitate the release of new knowledge to mankind. "This has been agreed upon. It means we start teaching the knowledge of the universe to the totality of the human race. There are those who have come with me and are part of my soul they will become the teachers of the coming time. Understanding the totality is not the job of one man but the soul of totality. When we teach and when we make interface interaction and we make conditions of different planets and universes in these portals for a man to learn to understand it keeps to my promise. I said I will take the man to the universe not as subordinate but at equal." In that process of interaction with the universal community in the coming months we will teach the totality of the knowledge of the universe that elevates the soul of the mankind as one, in the totality of the soul of

gives us a majority but then the decisions have to be made on the other space and dimensions.

The portal is for understanding the work of the universe and writing the peace treaty as part of the life of this planet. We have to understand the totality of the work and to understand what changes will bring to every single citizen of this planet. It is not any more to show GANSeS, Magrav units or Power

Universal Community. "Would we need to eat? Would we need to work? Seven billion population on this planet is not enough. The totality needs to meet the demand of the space as such in the next 100 to 200 years is at least 25 billion human habitation on this planet and into space. "

What do we expect from the interaction of these portals? Very simple. In time, when the man builds the right environment for manifestation and confirmation of the souls of those of the Universal Community, we might possibly see a physical interaction. That depends on how safe the members of the Universal Community feel to share with humanity their knowledge of given part which is theirs. "This brings us to one point the commitment to the spaceship conference and then following with One Belt, One Road of the President Xi of China will force us in one direction: the end of production of arms and financing what we call the peace activities." The technology is offered by the Keshe Foundation that can support such a movement.

"There is one thing which you have to bear in mind being part of the Keshe Foundation, being connected to the Keshe Foundation you should not give the arrogance of superiority, but you should give the humbleness of being there to serve."

We need those who understood the work of the Keshe Foundation through the actual soul of the teaching to be part of the members of the manifestation and presentation of the portals. At every portal, members of the Keshe Foundation through the knowledge of understanding of

the peace are and have to be present. "We are not peacekeepers, but we are the translators of the knowledge. It is not anymore Nano-coating, it is how fast most of the Keshe Foundation teams and the research centers move non-dimensional space-time gap systems."

In 2019 we will see the first interactions of mankind with the outside depending on how the world leaders and the nation of six will interact and share. The knowledge of the man up to now has been on the matter level and in the past when we see with the structures like pyramid or other dimensions, different cultures of the universe have played different game with mankind trying to teach them sometimes a new dimension but overall man has never achieved this and the creation of these portals will help us achieve it.

The Chinese portal and portals in other five nations must be the decision of how much humankind wants to do and wants to learn. All the portals will not be at the same strength, but they will be at different strength that collectively we see the totality of the structure of most of the universe.

Why were 6 portals chosen? "If you make a reactor star formation with the four reactors and then collectively they make that free plasma, how can you see what this craft looks like if there wasn't another dimension for it to show itself? You have seen the star formation and the creation of the free plasma that makes it five. How can these five exist if there is nothing to show to confirm its existence which is the soul of the creator? And that is

what it is. That totality is the soul of the Creator and the others are the collective interaction of the souls of the universe and man is part of the same. There is going to be a wonderful time!"

Now we have to go through a crash course of understanding the life and the habits of these man of the universe, the creatures of the life of the creator. This is what is going to be the part very hard to accept it and to understand. "This is why we chose the portals for mankind interface that we finish with people when seeing things, they become prophets and gods and whatever. The purpose of these portals is to bring neutrality over time that the man gradually gets to understand these are the intelligences of different creatures and we have to enjoy them, their beauty and not make prophets of that. Now you understand why we chose these portals the way we have: neutralization, familiarization that not anybody can claim anything."

"I am looking forward to the portals, it is something I worked for a long time on this planet. The reason we open this portal is to take away the mysticism of masters and prophets. You hear the voice of the soul not the physicality of the dimension. This will change a lot of people creating mysticisms and other things and Buddha's and Mohammad and the rest. Everybody understands the science of it and the logic behind it and how they want to use it."

Many of the sessions will be done through closed doors with the members of the Earth Council, the Universal Council, the Core

Team and members of United Nation. "We become an extension to the addition. There is no choice. How do you want to explain to the human race that there is a technology with the push of a button we can literally iced up, freeze all the souls together? It was like an ice block. Then where is the individuality? How can we show with the knowledge of the universe? The collective soul of the planet decides on totality. Gradually this will make a lot of sense to a lot to a lot of people in this position."

The creation of these new portals will be the testing ground for humanity. It will be a new beginning. Interface and interaction with the human race, it would take a new dimension. Portals which we create, everything will be prearranged, pre-agreed between Universal Community and members of the Keshe Foundation and then it will be released to the world leaders and the six members of the spaceship program. "We are not controllers, we are facilitators".

Portal language

In opening the portals, the members of the Universal Community do not speak Farsi, English, Chinese or any other language. We will see the communication and enlightenment on the level of the soul of the man; and how hungry the soul is, to be able to receive. Through receiving it can share on its level of its understanding. We will not hear the voice of the members of the Universal Community. "We learn and will be taught and will be communicated to the level of the soul and then the members of the Universal Council in understanding the level of understand-

ing of the soul of the man in the language which is part of theirs will share that through the souls of that language. That is why the Universal Council was set. Running in six nations the six portals and Universal Council members have to be aware of all the communications at the same time it brings a new dimension to understanding and positions one soul in respect to the others. Positions or portals." This needs a spectrum of understanding and translation to this level of the soul of the man. The biggest problem which comes for the members of the Universal Council is when they have to translate this understanding to the soul of the other members of the Universal Council, what they understood and what they shared amongst the soul of their own language. The positioning of the soul becomes vital. "It is like when you go to university to become a student and then you have to become a teacher to your new students at the same time you sit with the other teachers to see what I teach is equal to what you are doing that we work in harmony."

"This is the framework of the portals. Just because we open the Universal Community it does not mean everybody is going to be a land of honey and doing nothing and sitting to be fed. It means getting busier and creating more means that we can support the wisdom of the space. Seven billion is not enough on this planet to

understand that full knowledge of the universe."

"This is a uniqueness of beauty of this work. This is the work in the universe. When we open the portals, you will see the way I teach, the way I work is taught by people of my destination. We are free in teaching because the knowledge of God is free to the universe and the man has patented it and we will see how the change will come."

"There is a lot of celebration in the Universal Community about what is going to be achieved and at last, we can bring this family back into order and back as part of the Universal Community. There is a lot of beauty with the Earth and human being, but they have not appreciated it, they use it the wrong way. One of the beautiful things with the human race is loving and being loved and this is a very precious thing in the universe. Love has been learned from human and that is what I tell people, they do not understand. I have come here to enjoy the beauty and the love of this planet. It is one of not uniqueness but very rare things in the universe the way mankind loves.

Everything about this planet is to love, every creature of it. "

THE SPACESHIP PROGRAM TEACHINGS

by Keshe Foundation

With the setting of the Six Nations Portal System, we do not make the knowledge exclusivity to one that can hold one to the ransom of the others. Each nation will open understanding of the dimension of one part of the universe, that is why we split it. And then collectively they share.

When one university becomes expert in mathematics and one in medicine then they have to work together. In so many ways the teachers of the universe decide what subjects are taught and shared with the man in different paths that collectively they are sharing with the rest of humanity and completes the mosaic.

It is not given totally to the Chinese or to the Brazilians or to the Iranians. Each one according to their culture understands part of the universal work and in that process, each one will share with the others to complete the understanding. Man will be busy so much with teaching itself the new knowledge and the new dimension that man will not have time to make the tools of war. Now you understand what everything has been happening and how it's been happening in the past few years.

All the resources of nations to develop the space technology will be collective, not individually.

"I foresee in the coming year and years amalgamation of NASA with Iranian space technology with Russian space technology as one. China needs a lot to learn in the space program where Iran has matured in the spaceship program which NASA needs to move to the next step."

On the other hand, we have to understand what the implication of such a development and such a move are. When we make one nation, one group, as spaceship program with China, Brazil, United States, Russia, India, Iran, as one group it means in that process these nations, see the totality, understand the need for one nation as the borders will have no boundaries on the physical dimension. As we started the teaching of the

Those will become the cornerstones of the spaceship program: the unification of mankind.

medical professionals and the agriculture separately, we will start teaching the spaceship program in the fast dimensions of the governmental support guaranteed programs, which means that national scientists will commit to it, will take a new dimension of sharing knowledge and then this group has to decide how the knowledge will be passed on to the rest of human race.

The request from the Universal Community is for most of the communications to be live, that it is seen by the totality of the human race. This part needs to be seen.

Be it the language, be it the structure, be it a lot of other things which are within the structure of the Keshe Foundation. "The totality of the knowledge belongs to humanity and at the same time, we have to teach the world leaders how much we have to change. I told you when we see the first sign we move but we created the condition for the first signs."

If you look the pieces are all there, the teaching sits with doctor Gatua in Africa, the life sits with Giovanni in Italy, we see the understanding of the soul and operation of its physicality with Jon in Arizona, we saw the dimension direction of the non-physicality through the speed and motion with the research center in Austria. We've seen the patience of man bringing the understanding of the emotion of the man with the Chinese community.

If you remember some few years ago I spent three months teaching the basic of the knowledge in Trani in the beautiful nation of Italy. I go back to three months of solid teaching to the six space agencies which means I will teach the age of knowledge of the universe to these scientists.

"So when you look the patchwork is complete; now it needs to be sewn together and fill in the gaps."

The Keshe Foundation headquarters will move to a permanent position that will allow us to do the work we committed to. The management of the Keshe Foundation will move into the nation of Malta. We build an operational headquarters in the island, as it is the mixture of the understanding of three continents of Africa, Europe, and Asia. This allows us to build a solid center with the support of all the Keshe Foundation supporters. The development and the teaching of the Keshe Foundation will take shape in the coming year.

“The institution of the Universal Council and the Earth Council will be made in the island of Malta, we have given you home. We give you headquarters to operate through.”

We will see many movements within the structure of the Keshe Foundation because it means a lot needs to be matured and a lot

already matured needs moving further on. “Those who are there for the completion of this work are already there to do it. They go through testing and they have been through testing and now is the time for not passing a test but making sure that no one else will go through the test.”

How was Malta chosen?

It is the headquarters of the Keshe Foundation with which comes the Universal Council and the Earth Council. It has a port, it does not have a land lock that the nations can block you to reach. It was chosen on several merits, it has a small population, a peaceful nation, it is geologically stable, politically very stable.

“I was in Malta very recently with the Maltese Keshe Foundation. They thought I am there to see what was organized to do with the government, we did what we went to do, but it was initially to understand the soul of the

island.” It is chosen because of the security. It is chosen because of its openness into the oceans. It has a deep inherited culture, it understands the culture of Africa, Europe and Asia. It understands the culture of the Christianity, Muslims and Jews.

“It is a perfect place to be and, in the future, you will understand why when different things will happen. I chose Malta on a consultation with the Universal Community.”

The structure of Malta, the position of Malta is safe enough from a lot of geological problems like hurricanes, earthquakes and typhoons and a lot of other things which gives us stability to hold the councils meeting.

It gives the solidity to the whole structure of the work of the Keshe Foundation

by Keshe Foundation

1ST INTERNATIONAL CONFERENCE OF THE SPACESHIP NATIONS

Many of you see patches of work and do not see the totality of the patchwork. We see, we know what we developed, we know where we sit and how the Keshe Foundation became the seeds but not the totality of it.

In this respect, we have called for the meeting of China, Iran, United States, Russia, Brazil, and India space programs in Beijing. We foresee the meeting according to what is arranged with the Universal Community, around 8th or 9th of March of this year. This will allow all the space agencies with the support of the Chinese government on the back of One Belt, One Road to meet in China, which means we start a collective One Nation Space Program. We would like it to be as a time chosen by the members of the Universal Community.

"I would like to thank the Chinese government for facilitating the first International Conference of the Spaceship Nations. We will teach equally to the Iranians and Americans as we do with the Russians and Indians as Chinese and Brazil. No other nations at this moment seem to be or have the capability to understand the massive progress which is in the background of such an interaction and such a meeting.

We have received approval from the Chinese government for calling this conference on a national level."

NASA organization will be invited, the same as Russian space agency, Iranian spaceship program, the "hidden development" of the space program of the Brazil in conjunction with the German government which has been in the background for decades. Now we give you the room to become part of the International Organization.

Indians understand the space program in a different dimension and the Chinese add the totality of these nations, it brings balance to understanding the total culture of the human race.

"We have not chosen a portal for European nations as we do not see this continent as an individual continent that nations need to be in such a program and you will understand in the future why. In a way, we have represented the European continent through Germany through Brazil, as you know during the Second World War and after many German programs were moved to South America and this programs at the moment are very advanced. We collectively will bring these Sciences together. "

The requests for establishment of a meeting in China of the space programs will be made through the Keshe Foundation in conjunction with the Chinese government officials, it is an official program.

"It is not just a conference of the space technology people, but it is a conference of planning the future of humanity using the space as a new way of employment. We replace the old with new we do not bring hope, but we bring the knowledge.

This has taken us a long time to plan and to execute but we had to bring a lot of people to the maturity of understanding the time, the place and the knowledge.

There are enough knowledge seekers around the world which can become the seeds of the new change. "

by Keshe Foundation

“Hundreds flock **Gatundu** South to obtain **plasma** activated water”

KBC Channel 1 reports

Credit to <http://www.kbc.co.ke/> / <https://youtu.be/hk6rB5-BT9U>

KBC Channel 1 is one of the leading broadcasts TV stations from Kenya with the aim is to promote the value and culture of the country.

Recently the media has turned its attention towards the teachings that Dr. Gatua wa Mbugwa, Universal Council member for Gikuyu language, freely delivers to Kenyan community.

“We learn how trees harvest or capture CO₂, carbon from the environment – and we do the same. If you have a wound, which is a septic wound caused by a bacteria, bacteria is made of the same plasma, it is plasmatic.

So the stronger plasma in terms of magnetic gravitational fields give to the weaker and then there is a balance. That in effect means that bacteria may still be in there but it is ineffective ” Dr. Gatua responded to the interviewer.

Not only that the classes are free for everyone to join, but at the end of each teaching, nobody leaves empty handed. They all receive plasma water to which many have attested for its effects in various applications.

During the 256th Knowledge Seekers Workshop on 27th of December 2018, Mehran Keshe addressed a question to Dr. Gatua asking to guide the rest of us how to teach the way he has taught, to have the knowledge and experience shared, how to use the new interactions to teach mankind. Here is his response:

“I believe you have taught us exactly how to do it. It is using the new ethos, Keshe Foundation ethos, that we are here to serve and not to be served.

What I have done in Kenya is establish a group of participants and before that I used to give my liquid plasma that I made at home, freely, to a lot of people.

They saw the effectiveness of that liquid plasma, CO₂, CH₃, ZnO. And I would teach them freely, without charging them.

So when I started a group, I taught... we started with 14 participants. In the following week more came; soon we were teaching hundreds.

In fact, at one point we reached 500 but usually we have 300 and the last time I taught , when the newspaper, TVs came around and interviewed us we had 306 participants. “

There are hundreds of people travelling each week to the place of teachings with the open heart to listen, learn and understand how to apply the knowledge by themselves.

"They have come from various places, after learning through word of mouth. When we give this liquid plasma freely to people; in fact we made 1000 liters at this place where we teach. So when we have about 300 people in attendance that means at least each one can carry 3 liters.

But now, those I have taught, because I started this group in January 2018 they do not necessarily need to carry from this center because they can make theirs.

In fact, when I begin teaching they come with their GANS that they have made at home so I tell them – they ask me: Is this correct? Is this good? - and I tell them based on the color .

It has just grown by word of mouth. We started getting participants from far away places in Kenya, as far north as Lodwar which borders Sudan, we have one making GANSes there.

We have people along the coasts, who also make their own. We have people all over the country.

We teach freely, we do not charge a thing and through the word of mouth people tell what they have seen, what they feel, how their health has improved, how they are using it for agriculture, so they just come.

Now with the latest advertisement in the national television station,

Kenya broadcasting television which interviewed us last week we expect to grow even more, maybe we will have thousands.

And when they ask I say: Come! You are all welcomed.

So that is the progress I have made.

What has worked is the effectiveness of the liquid plasma that we share and the fact that I show them how to do it themselves.

Instead of giving them fish, I show them how to fish. This is exactly what has helped grow this movement.

Once they realize we are serious, we do not charge them anything, we want them to learn they come.

And basically I know that can be done anywhere!

Thank you very much Mr. Keshe for teachings us this ethos which we have put in practice in Kenya!"

Thank you very much, Dr. Gatua, for all the inspiring work you are doing to share the knowledge.

NEW TEACHING FORMAT FOR THE PRIVATE TEACHINGS IN ENGLISH 2019

by Pete,
KF SSI Education Team

How to learn effectively? How to teach effectively? These are two very common questions asked by the academia. Both, teachers and students, come to the traditional or virtual classrooms and share common interest - to teach and be taught effectively and efficiently. There is no silver bullet to this dilemma, however if one looks at the older and recent studies (<https://www.linkedin.com/pulse/20140313205730-5711504-the-science-behind-ted-s-18-minute-rule/>), research done in this space suggests that the shorter the better. Frequently, figures between 10-15min appear in many of such studies as the reported average attention span. Moreover, if we look at the frequently shared and viewed content on the social media and YouTube, videos that are short attract far more attention than lengthy videos.

The Keshe Foundation Spaceship Institute (KF SSI) Education team listens to the feedback from students, teachers and recent discoveries from the world of science. Short attention span, self-directed learning, lack of time, listening on-the-go are all important factors which influence the learning experience. To help student and teachers of the KF SSI, we propose a new teaching format to be followed in the first trimester of the new academic year, starting on the 14th of January 2019.

We believe that students will greatly benefit from it and at the same time it makes the life of the teacher easier.

Proposed teaching format

So, what is the new format? Before we get onto this, let's do not forget that every teacher is **different** and some like to follow their own way and style of teaching. Are all the flowers the same? No! **Diversity is beauty**, and we always welcome those who want to teach differently from what we are recommending.

For those who do want to try something different, here is the new way explained in simple terms. Every lecture is composed of two parts: teaching and questions and answers (Q&A). Teaching is to be short and concise with a clear title of what is covered and lasts no longer than 20min. During these 20min you can either present your PowerPoint presentation (no longer than 20 slides) or play video recordings of past private or public teachings to discuss, or both. If you go for the video playback, the KF SSI Education team will do their best to help you find the content you are after.

One suggestion is to, prior to the teaching, open the selected topic of teaching in various Zoom groups such as Teachers Channel, Health/Agriculture Channel, [KF Wiki](#) Channel and student channels (also extending to Facebook groups) and ask participants of these groups to suggest private/public teachings and other materials (articles, animations, other resources) on the topic. In this way **all the Knowledge Seekers can contribute with their expertise of the field**. You don't need to stick to one recording but can present a number of them, which are on the topic of interest.

You can then discuss the video(s) using the **Whiteboard** or the **Annotate** feature of the Zoom platform or follow up with a PowerPoint or any other presentation - but please keep all of it to 20min maximum. Alternatively, you can choose to present entirely by yourself without the aid of the past teachings by Mr. Keshe. If this is the case, simply put together a maximum of 20 slides. When doing so, please remember to reference any materials you used to prepare it, so that students can follow up on these if interested.

The final part of any way of teaching are the **Q&A**. We wish for our students to be interactive and have an opportunity to express their views, opinions and understanding. Teachers are there to answer these and if they don't have an answer, others present may do. Q&A has no time limit, other than the two-hour mark which usually ends the class.

Other benefits

Teachers are warmly encouraged to **translate and give their teachings in their language groups**. Having short teaching content, makes it easier for teachers to bring the teaching into their private language groups. Even if this involves video transcription, the task is fairly short. Not all the Knowledge Seekers speak English, yet this should not prevent them from accessing the teachings.

Teachers are also encouraged to turn their presentations into the **Plasma Scientific Journal** or **KF Plasma Times** article submissions. Please consider pairing up with students (and other Knowledge Seekers) who can help you with this task, if you are planning on publishing your work.

Step by step

1. A list of teaching topics is circulated amongst those expressing interest to teach. Of course, teachers can choose their own topics that they feel comfortable in teaching.
2. Teachers get in touch with the KF SSI Education team with their topic(s) and availability to teach.
3. Teachers are provided with a timeslot, a PowerPoint template and technical assistance to help them in the process of preparing/locating content - if necessary. Already identified educational assets, in the form of animations and past presentations or other resources to aid their teaching, will also be communicated to the teachers upon committing to teaching the topic. One can teach by summarizing the topic, extending the topic, linking different parts of (different) teachings, or by bringing a new understanding from other sciences. Teachers and the Education team can also involve other Knowledge Seekers to help them locate the desired content.
4. Teaching takes place within the agreed timeslot.
5. Teachers can teach the same topic in their language communities and also publish it as either a scientific paper (in the Plasma Scientific Journal - if they are adding to the existing knowledge) or as a non-scientific article (KF Plasma Times).

Open invitation

If you are a student, come along and join us in the private classes to enjoy the new learning experience. Both students and teachers are encouraged to serve by teaching others and both teaching and learning has never been easier. If you decide to teach, you are not left by yourself, as the KF SSI Education team is here to help you in respect to any aspect of the teaching - be it technical aspects, pinpointing teaching materials or original teachings, and many other aspects.

We are here to serve and to help others to serve. Interested? Perspective students can apply by visiting (<http://keshefoundation.org/study-apply>) and teachers can contact us via education (at) kfssi.org.

Q&A

Q1: Do I have to prepare a PowerPoint presentation if my teaching is based on a video playback?

A1: No, you can simply talk about it or use the drawing board.

Q2: What if I lack technical skills to prepare the teaching the way I want?

A2: We are here to help and if you are committed to teaching, we are committed to help you teach.

Q3: What if I am not able to share video content?

A3: The host is there to assist you. Let them know which teaching and the precise timings and they will play it for you.

Q4: How long should be the teaching?

A4: The teacher is expected to prepare 20min of content, which can be purely a video review or a PowerPoint presentation or a mixture of both.

Q5: Can I do a workshop on how to build/prepare/apply something?

A5: Sure, these types of teachings are extremely useful.

Q6: What if there are no questions after the teaching?

A6: You can either end the session, introduce some questions or other angles to the topic, or follow up with whatever students want to discuss.

Q7: What if 20min is not enough for me to teach the topic?

A7: You can do a series of teachings e.g. two, three, five. If you are over six, perhaps you want to turn it into regular teachings such as regular book studies or the soul teachings we have.

Q8: I am already teaching in private English classes, do I need to change my ways?

A8: No, unless you want to try something different.

**Please join us in the new year and a new semester of the
KF SSI Education Private teachings program.**

PLASMA^{CARE}

The secret from within!

PATCHOULI SHOWER GEL

Let the plasmatic touch embrace and revitalize your body while getting mesmerized by the natural herbal fragrance of Patchouli.

ARGAN SHAMPOO

The special formula with Argan brings the shine back to your hair. Let your hair regenerate and feel the plasmatic nourishment.

SANDALWOOD LIQUID HAND SOAP

New handwashing experience with relaxing aroma of Sandalwood, energizes your plasma fields while keeping the germs and bacteria away.

ARGAN | SHAMPOO&SHOWER GEL 2IN1

Practical and time efficient, this stress-free combo is all you need for a plasmagical experience.

100 %
NATURAL

MADE IN ITALY

Portuguese Knowledge Seekers deliver PLASMA TEACHINGS in Brazil Health Conference

KF: What was the topic of the conference, how often is it held, what is the target audience?

CU: The topic of the conference was "Wound Prevention and Treatment Congress". The audience was health professionals, doctors, and nurses, people specializing in treating chronic and multi-species wounds! This congress is held annually, and it has an international character.

KF: What was your role in the conference?

CU: My role at this conference was to take a new technique with a differentiated scientific character! The director M.B. invited me, to open the event for 3000 congressmen from all over Brazil and some speakers from outside Brazil!

"Dear Dr. (s) C█████U█████,

We are pleased to count on your participation in the scientific program of the 7th Brazilian Congress on Wound Prevention and Treatment, which will be held from October 31 to November 3, 2018, at the Convention Center of South America in Rio de Janeiro.

Below are the details of your participation in the following activity (s):

Date: 11/1/2018

Hours: 7:00 p.m. - 7:30 p.m.

Location: AUDITORIUM 1

Activity: OPENING CONFERENCE: HERE AND NOW

Theme:

Function: CONFERENCE"

As the director and organizers of the event mentioned "It is necessary to establish new public policy goals guided by the intelligence apparatus of measures that produce real structural transformations decisive for the whole health system in order to become efficient and effective, through the implementation of some actions, generating significant results of quality of life for patients.

KF: Why did you choose to present Keshe Plasma Science and Technology?

CU: I was invited to talk about my work and what I work for! As I currently only work with Keshe Plasma Science and Technology, I could only talk

about the subject and tell them that with this technology we work. With the Magnetic and gravitational fields and that to be aware of these fields we have to be "present" in the "here and now" and from that everything in the lives of people would be different, and that everything is related to these fields of energy!

KF: What was the reaction and feedback from the audience?

CU: The reaction was the best that a job could have, it was incredible, the general public liked it very much, the presentation had a wonderful repercussion and due to it we had an invitation to participate in health programs with the federal government and due to the success of the presentation

I was invited to attend this event next year giving a course on Keshe Technology and also attending other events, we received an invitation to give free courses in some universities!

KF: What are your wishes for the future in relation to development in the Portuguese community?

CU: I believe that from our participation in this event, there was a great opening for technology and how it works, my sincere wish is that we can from now we work with all this possibility open to us here in Brazil and we can benefit more and more people with this technology Wonderful!

I am very happy, we had a lot of work here and thanks to the Team of the Portuguese Language (directed by Pedro and Rui) we were able to advance much with the technology in several places of Brazil where we now have a repository of the Portuguese language with translations and translated works! I also work in the health area in several places in Brazil, seeking to meet the largest number of people I can get along with this technology! Mr. Keshe, I just have to thank you for making this technology available. to the World, Gratitude !!!

C.U.

Oil, Gas, Protein, and the Earth

Author: Mehran Tavakoli Keshe

Note

The contents of this paper and its images cannot be quoted, copied or printed, in full or in part, as hard copy or electronically or be put anywhere on the Internet or any network or be sent in any communication or be used, linked or quoted in any article or book without prior written agreement of the author.

In the present state of art of science and geological theories, it is considered that all petroleum oils, which are extracted from the inner layers of the Earth, are due to the decomposition of the oils from animals and vegetations, which have died or been imbedded in the layers of the soil of this planet over millions of years.

This theory considers that these remains, be it animal tissue or leaves of trees, as they were buried in the ground or covered by soil, and as these bodies decomposed, then their oil was slowly released into the earth's solid top section.

It is thought that due to the gravity of the earth, these oils were then sucked and moved into the inner parts of the earth. As these oils warmed and went through the compression and high temperature of the inner layers of the earth, then these oils became as they are today, when extracted from different depths of the earth.

Nowadays, these oils are refined by the oil industry for different applications, the like of petrol for the

motor industry, lubrication and so on. This theory could be partially correct, but with the amount of oil and different types of oils which have been found around this planet and the different compositions of them, this theory is no longer acceptable in the light of the new discoveries regarding the production of new materials from the atmosphere of this planet, which our field tests and laboratories trials demonstrate.

In the research and development of GANS (gases in Nano state, which is a solid state of a gas, at room temperature) of matters and with the process of the conversion of for example CO_2 from the gas state to the solid state of its matter state as a GANS, this process of the release of GANS, has simultaneously led to the creation of layers of protein on the surface of the containers, while the CO_2 conversion from gas to GANS has been in progress.

These fat layers have been sent to different institutes for nuclear and chemical evaluation, their

data will be released in due course.

In the same process, it has been observed that low levels of energy are generated and released in the liquids during this process of conversion of gases to GANSes. This leads to the creation of heat, needed for maturing and to allow the conversion of the proteins to lead to the creation of oil, and keeping it in semi-liquid state as it is extracted from the deeper layers of the planet nowadays.

This process of energy release by the conversion of gas matter to GANS releases energy, and the human body uses this same process for its heating, to keep it at about 37° Celsius.

In our laboratory tests, which we have observed and used the presence of different elements for the conversion of matter to GANS, and these have led to production of different compositions, thickness and density of the protein on the top layers of the liquids of each test compartment in their test environment.

For example, when less salt is used for the conversion of the matter to GANS, the protein composition is thinner and feels much lighter in texture compared to if we use more compact wiring and for the coating of the wires a more compact matter density Nano material and a more salty environment condition in the different compartments of the test tubes of these systems.

This in fact shows that the more dense the matters and metals were in the compartment and the higher the salt concentration in the water, the thicker the protein layers look and feel at the top of each compartment (Figure 1, 3-5).

On the other hand, in tests done in Fukushima concerning the decontamination of the radioactive contamination of materials like the Fukushima farming soil and water, the person carrying out the test was asked and reported the observation of fat and oil on the top layers of the soil once the GANS materials

were introduced into the sample test units. This confirms that protein production occurred during the conversion process with the use of GANS materials in the presence of salt and water in the environment of the test units in the lab and in the soil. Therefore, considering the laboratory tests, and the tests done with the soils from Fukushima, it is clear that different oil compositions developed depending on the salt and metals and minerals in the environment of the conversion in different test compartments. Oil in the inner parts of the earth was and is produced by the same process, and not by the process of the decomposition of plants and animals over millions of years.. Therefore, with these tests it can be understood and confirmed that oils which nowadays are extracted from the inner parts of this planet are not and were not produced from the remains of the animals which were roaming the green planes of this planet, or they were not due to the decomposition of the plants on the surface of the earth.

In fact, this planet has changed and produced its oil through and during the conversion of CO₂ from gases to GANS state of matter and in the process has released a vast amount of Oxygen in its atmosphere, as has been explained in the other papers by the author (Figure 2, 3, 4).

In other words, even the change of atmosphere from its acidic to oxygen levels has been through

the process of conversion of state of matter and in presence of nitrogen and carbon, and hydrogen released and oxygen present has led to creation of protein, and in given condition to creation of amino acid of life on this planet.

Physical and tangible lives are sometimes creating in the universe

in different forms through this process and life is not exclusivity of this planet. So the creation and production of different types of oil, be it called light or heavy oil, which is extracted from the bowels of this planet by the oil companies, exist due to the conversion from gas to GANS state of CO₂ and

Figure 1: Gans production cell with thick surface layer.

other matters, and have nothing to do with the present assumptions that the oil comes from the decomposition of the remains of animals and plants millions of years ago.

to the process of conversion of CO₂ in its atmosphere, and in the presence of metals and salts in different layers of its structure, this has led, is leading and will lead to the production of protein,

Figure 2: Gans production cells with gas bubbles

The truth is that the Earth, even at the present, is still carrying on with the same process, and this is due to its construction and material composition. So even today and every day the Earth is producing large quantities of oil which are naturally sunk into the inner layers of this planet and then in time, these new and ever continuous conversion of different state of mater will lead to the production and storages of different types of oil in the inner sanctum of this planet.

The present increase in CO₂ in the atmosphere is causing the natural production of more oil, and can be used to produce protein directly from the atmosphere, and this process simultaneously increases the level of oxygen in the earth's atmosphere, as we have shown in our tests.

So by this process, that which is now considered air pollution, can be benefitted from, to enhance the process of the production of different oils with different compositions, without going through millions of years of conversion, as we have demonstrated in our tests in the laboratory and in our field trials.

Thus: the theory that the creations from the past are at the origin of the present oils, is a fallacy and this oil has nothing to do with animals and plants, its formation is a normal and natural process of creation of proteins from the environment of the planet, without the intervention of other entities like animals. In reality, as animals and plants produce protein, the earth itself also produces protein. Due

as has been observed in the lab and different tests in Fukushima in a natural way. In the case of oils which are extracted from the earth, the proteins were produced in the environment, and if they were not absorbed by or attached to another element to become an amino acid as part of plants or animals, then these mostly sunk in the soil of the earth and In the process became non-animal, planet protein.

Next these proteins in liquid condition are collected in the inner sanctum of the planet, and then become further heated and become oils, as they are extracted from the inner part of this planet nowadays.

Therefore the oil industry of today should have no worries that one day the oil will finish, as this oil is produced by the planet, and it simultaneously makes oxygen for man to breathe.

As long as there are salts in the seas and there is CO₂ in the atmosphere of this planet, and as long as there are different metals and semi-metals floating in the lakes and the oceans of this planet, these materials, and the process of conversion of CO₂ from gas to GANS, in their Nano condition behave like the materials in the test tubes of the laboratory tests. This conversion process releases oxygen into atmosphere, as has been observed

in the tests, and simultaneously new proteins are formed, and so there shall never be a shortage of oil in this planet.

As man is using more oil and releasing more CO₂ in the atmosphere, then as long as the salt lakes and oceans exist, more and more oxygen is released in the atmosphere of this planet.

At the same time, in the upper layers of the atmosphere of this planet, there is a continuous production of nitrogen, through the conversion of fields and rays. This creation of matter guarantees a continuous, everlasting production of protein and oil for the future generations of men on this planet.

As has been shown in tests, one can produce oil for the oil industry directly and with little costs and without waiting for millions of years for the process to be completed, by simply replicating this process. This has been demonstrated by the production of GANS of CO₂ in the laboratory, and by their positioning in the salty environment of containers, where we can continuously harvest protein and fat, this is a replication of the oil production from the environment on this planet.

In reality one does not need to grow corn and seeds for their sugar and oil content to produce fuel for the industries of today.

into the GANS state of its matter, and from a Magrav point of view, brought balance between four natural elements of this planet's atmosphere and its waters, by creating an environment of Magravs balance of an amino acid (containing hydrogen, carbon, nitrogen and oxygen), then the Magravs balanced GANS of these elements has led to the creation of Magravs of what is known as protein.

If this molecule of protein with balanced Magravs has managed to attach itself to other molecules or matters in process of its life, it has succeeded to manifest itself as protein in the vegetative form. As it managed to interact with different salts and waters and elements, it led to the creation of water microorganisms and later on fish, which could live in the environment which itself led to their creation.

In turn, as these life forms managed to use the energy of the hydrogen in the moisture rather than in the liquid, they became air breathing entities, needing an organ like a lung for the extraction of energy from the same process, as we see in man.

In some cases where the protein did not manage to attach itself to other elements, and due to a large and rapid conversion, this led to the production of surplus oils, and after drying of the lakes and seas, these oils were left on the surface of the planet and due to their weight, in duration of time, they sunk in the soil and became buried and heated and became the present oil and gas reserves.

In other words, oil and petroleum can be made and replicated freely and

easily using the new understanding of the production of Nano materials and the GANS of the material in the environment of the salt of the liquid.

At the same time, we have seen that in the process of the production of protein, gases are released in the liquid of the containers in the laboratories, so if one creates conditions, one can create the right conditions for the release and production of methane and any other gases which

Figure 3: Gans production cell with thinner surface layer and gas bubbles

If the past millions of years of the geological structure of the planet are studied in detail, one will discover that most of the present oil reserves, which are extracted from the earth, are near and below the areas where waters reserves like lakes, salt lakes, seas and oceans used to be on this planet in the past.

Therefore, as the waters of different salt content and other matters in dilution converted the CO₂

man needs. We have demonstrated this in the tests, and published it in the book "The structure of the light" with Raman spectroscopy tests as proof. Also the observation that these gases are extracted from the inner sections of this planet, like the oil, is a confirmation. Thus the gas reserves being near the oil reserves are a natural process in the conversion of CO₂ from gas to GANS state in the life of this planet.

Figure 4: Gans production cell with thick surface layer and gas bubbles

So the creation of gases and their release in the environment, is part of the same process which leads to the production of GANS and protein, as we observed gas bubbles being released in the same containers. This new technology opens a new era for man's energy production, which is matter dependent, as is his life which is connected to this planet. Thus there is no need for energy

control and oil, as every man can produce his own oil and gas for his energy and life if one needs. Now we need to understand which oil and protein man would like to have, to eat for life energy, or to burn as fuel. In space man in producing CO₂ in the spaceship crafts, in the future, his waste of CO₂ becomes his food for his energy, by producing protein, and at the same time his source of oxygen production for his life. In space there is no need for life support systems to keep man alive. Man will create his own food and oxygen through the use of simple processes, as we have shown in the laboratories. This way as a race, he can stay alive for thousands of years in deep space without the need for earthly resources.

This is the wisdom of creation, man never understood the process of creation in his planet, and the same process has and will be carried out in the rest of the universe, with the difference that in some cases the molecules will be invisible to the physicality of man's limited detection Magravs strength systems, due to their balance of Magravs with their environment.

Thus oil has never been from the body of animals as this would have needed much more animals that this planet could ever support, but it has been a nice story to tell the grandchildren, and again we have unraveled another mystery of creation in the universe of man, who still has a limited knowledge of his environment.

Production of the four basic GANSes:

 $\text{ZnO},$
 $\text{CO}_2,$
 $\text{CuO},$
 $\& \text{CH}_3$

by KF SSI Education Team
December 2018

Subject

This paper provides the reader with an easy to follow, step-by-step guide on how to produce the four basic GANSes, which are in various ways connected to our bodies. Other resources relating to this topic exist on the KF Wiki¹ and the KF SSI YouTube channel². The basic theory behind the production procedure is explained together with the affinity of each of these GANSes to the particular aspects of the human (or any other animal's) body.

Taking a step back, let's first consider what GANS actually is. GANS is the abbreviation for Gas in Nano-state of Solid and as explained by M.T. Keshe in his second book, "This condition of GANS of matter comes about at ambient temperature and pressure when due to internal Gravitational and Magnetic fields' strength of the atom the atom's physical appearance changes and the atomic structure of the gas changes to a compact configuration of the solid. The atom of the same gas becomes and behaves like a solid but with totally new properties and characteristics which were never known when the atom was in its other three initial known states (gas, liquid and solid)." (Keshe, 2011).

Method

There are many methods through which one can produce GANSes. Traditionally, this is achieved through the use of two (or more) metal plates or coils, one of which is Nano-coated. Table 1 gives an overview of which metals are used in the production of the four GANSes. Other methods exist, for example, GANS of vitamins, food and other substances can be prepared through the use of caustic soda or CO₂ GANS and plasma water.

The process in a GaNS production box is similar to the process of absorption of food or air - no matter crosses the wall of the lungs or intestine, but a certain condition is created to attract the field of the elements of Oxygen (lungs) and other matter consumed (intestine). In this way human body (and the GANS production box) creates a condition of a 'magnet', which attracts fields of a specific strength (being the weaker and hence dictating the direction of the flow). The attracted fields, in the salty water environment, slow down and transform into the matter state of a given element. The complete list of materials required for the production of any of these four GANSes is as follows:

- * Plastic box (optionally Nano-coated for faster production)
- * One metal plate or coil
- * One Nano-coated metal plate or coil
- * Pure sea salt and distilled water
- * Copper wire for short-circuiting of the metals
- * Green LED
- * Two alligator clips (optional if plates are not drilled)
- * Nano-coated plastic spoon to harvest amino-acids
- * 2 x Plastic or glass containers to store amino-acids and GANS
- * Syringe to collect the GANS or to remove excess water

GANS	Color	Metal	Nano-metal
CO ₂ (CO ₂ + ZnO)	Cream white	Zinc	Nano-copper
ZnO	White	Zinc	Nano-zinc
CuO	Reddish brown	Copper	Nano-copper
CH ₃	Turquoise	Galvanized Iron	Nano-copper

Table 1. Metals used in the production of the four basic GANSes.

Production procedure

Step 1)

Depending on which GANS one wants to produce (as per Table 1), Nano-coat one of the plates/coils following any of the available video or text guides³. Prior to this process, if using metal plates instead of coils, drill a hole in a corner of both plates (this eliminates the need for the use of alligator clips). If no drill available, alligator clips can be used.

Step 2)

Hang the two plates in the production box, opposite each other at a distance of several centimeters - as per Fig. 1. Plates or coils should not touch the bottom of the container but instead should be fixed 1-2" above its bottom. If they sit on the bottom of the box, this will slow down or prevent GANS from being produced.

Step 3)

Connect the two plates via a copper wire either by going through the drilled holes or using alligator clips. Optionally when connecting the plates, one can place a green LED in this circuit. The use of an LED light in the circuit helps to create the flow of energy between the plates. As with every GANS

production, connect the anode (longer piece of wire = positive pole) of the LED with the copper wire that leads to the Nano-coated metal plate/coil, and the cathode (negative pole) with the copper wire that leads to the metal plate/coil (Fig. 1).

Step 4)

Fill up the GANS production box with a 3.5-10% sea salt, distilled water solution (make sure the salt is not contaminated by any minerals). Place the box away from other boxes and reactors and leave alone for couple of weeks. The time needed to produce each of these GANSes depends on a number of factors, such as type of GANS produced, materials available in the proximity of the production box, water salinity, distance between the plates, quality of the Nano-coating, purity of metals and other.

Step 5)

When one observes the deposit of the GANS at the bottom of the box, or the plates become too salty or worn out, it is time to harvest the GANS. Set the plates aside and with a Nano-coated plastic spoon, collect the amino acid which floats on the water's surface. Store it in a clean glass or plastic container and top it up with distilled water not to dry out.

Step 6)

Either use a syringe to collect the GANS sediment from the bottom of the production box or carefully remove the excess water with it and pour the sediment into a separate glass or plastic container to store it. Washing of the GANS to reduce salinity is optional and depends on the application area.

For more information and pictures, detailed guide on the production of the four basic GANSes is available on the KF wiki.⁴

Useful Tips

- * Make sure you wash your Nano-plate of any caustic soda residue, before using it in the GANS production.
- * Handle Nano-materials with care. Do not scratch it, be gentle with it and never stack it up.
- * Use caustic soda Nano-coating method which results in more permanent Nano-layers than fire-coating.

- * Make sure the salt you are using has no impurities.
- * You can produce GANSes not only through the use of sea or table salt (NaCl) but also using other salts such as Magnesium or Potassium.
- * Nano-coat your GANS production box for better results or simply reuse one from a previous GANS production of the same GANS as during the production process walls of the container get Nano-coated.
- * Use plates/coils which are not too thin as they can break either during the Nano-coating or GANS production processes.
- * Every GANS produced is different in strength - think of it as isotopes of the same element. Therefore, in order to cover a wide spectrum of fields, add your e.g. freshly produced CO₂ GANS into the jar/container with previously produced CO₂ GANS. Over time, your CO₂ GANS has many different 'flavors' to it and can be more effective in any application area.

Figure 1. GaNS production box

- * As water from your GANS production box evaporates and decomposes into GANS, some of the salt crystals can deposit at the bottom, which reduces water salinity. Top up your boxes with distilled water and if needed add some salt into the distilled water used for topping up.
- * Keep you GANS production boxes at least 3-5 meters apart in order not to influence the process in each box and to achieve the expected results.

How does it work

Let's consider the CO₂ GANS production in which a Zinc and a Nano-coated copper plates are used. Atomic weight of Copper is just over 63.5 (69% of the copper isotopes is Cu63 and almost 31% is Cu65) and Zinc is 65 (just over 49% is Zn64, other isotopes are in the range of 66-68)⁵. In the Nano-coating process, any metal loses around 5% of its atomic weight. Therefore, Copper reduces to around 59 atomic weight. The difference between the two plates (65 and 59) is 6 and it is the atomic

Figure 2. The four basic GANSes.⁷

number (number of protons in the nucleus) of Carbon. Therefore, the CO₂ production box creates a plasma field between the two plates of the strength 6, which like a magnet, attracts Carbon present in the atmosphere around the box. In plasma, stronger feeds the weaker to find balance, and hence the field created in the box is the weaker part. In the salty water solution, Carbon oxidizes in the presence of the plasma of Oxygen and deposits as a CO₂ GANS at the bottom. The side effect of the CO₂ GANS production is the presence of ZnO GANS. The Nano-coated copper plate creates a condition for attraction of Zinc from the Zinc plate, which in turn oxidizes to become the ZnO. As a result, the CO₂ box produces a mixture of CO₂ and ZnO GANS, where the ratio of the two depends on the setup. More details can be found on the KF wiki page on the CO₂ GANS production⁶.

GANS of CH₃ is produced in a similar way and is a 2-stage process. Firstly, the Nano-copper (59) interacts to find balance with the layer of Zinc of the galvanized Iron. This 'magnet' for Carbon attracts this element and as a consequence the CO₂ GANS gets produced and deposits at the bottom of the box. Secondly, the fields of the Nano-coated copper plate interact with Iron (atomic weight close to 56, with almost 92% of Fe56) and create a 'magnet' for H₃. Tritium attracted from the atmosphere binds with Carbon fields already present in the salty water environment and deposits as the CH₃ GANS at the bottom of the production box.

CuO and ZnO GANS productions use the same metals to produce it. For CuO it is Copper and Nano-copper, for ZnO it is Zinc and Nano-zinc. The Nano-coated metal plate attracts/pulls elements out from the other plate, which then oxidize in the plasmatic water environment and deposit at the bottom of the container in the form of GANS. GANSes acquire the affinity towards the environment which produced it. Therefore, the CO₂ GANS has affinity towards Copper and Zinc, as well as towards Sodium (as NaCl is present in the water). Moreover, whatever materials are used in the Nano-coating process, the produced GANS also has affinity towards them e.g. using Magnesium hydroxide Mg(OH)₂ in the Nano-coating process. Therefore, each of the produced GANSes differs in strength as it is affined to the elements and environment which produced it. In other words, these are the common denominators Knowledge Seekers hear so much about in various context.

GaNS	Links to	Effect
CO ₂	Nervous system	Balances the neuro system
ZnO	Emotions	Balances emotions
CuO	Lymph system, physicality, muscles	Disinfects, supports muscles
CH ₃	Blood system, energy for the body	Energizes the body

Observations

During the GANS production one observes the following. Firstly, oxygen bubbles appear on the Nano-metal plate/coil. After couple of days (or weeks, depending on the setup) one can notice a sediment deposition at the bottom of the production box and a thin layer of amino-acid building on the water's surface. Often, salt crystals build up and deposit on the part of the Nano-plate which is above the water's surface.

Table 2. Use of the four basic GANSes.

Usage

The GANS and amino-acid production is the way life started on this planet. It all started in the salty water environment of the Oceans and surrounding matter and GANS state. During GANS production process, the two metal plates in a salty water environment create a condition for attraction of certain elements e.g. Carbon, Zinc, Copper, Oxygen, or Hydrogen. These are the basic elements, which life on this planet is based on. Table 2 shows the connection of these four basic GANSes to the human being. GANSes are the basis of the Plasma Technology and are applicable in many areas, such as Food and Agriculture, Health, Energy, Decontamination, Space Travel and other. Amino-acids collected from different GANS production boxes are of different strength in respect to each other, as they get attracted by different strength 'plasmatic magnets' created between two metal plates. GANS is also used to prepare the

liquid plasma by mixing it with distilled water and collecting the water above the sediment. For applications in Health and Agriculture, amino-acid is added in the process of preparing the liquid plasma to strengthen its connection to living organisms, which are all based on amino-acids.

Magnesium GANS: production and uses

by Jon Bliven, Keshe Foundation Manufacturing Arizona
December 2018

CSIRO ScienceImage 2893 Crystallised magnesium.jpg

Subject

This paper documents the production of the Magnesium GANS and identifies its potential uses.

Method

The proposed method of GANS production uses a standard GANS production kit, such as the one available from the USA store¹. The production of this GANS is analogous to the CuO GANS production. In the production of CuO GANS, one uses a copper plate and a Nano-coated copper plate. The production of Magnesium GANS requires two magnesium plates, one of which is Nano-coated.

Materials

The complete list of materials required for the production of this GANS is as follows:

- * Plastic box
- * Two magnesium plates (anodes or magnesium ribbon), one of which is Nano-coated
- * Two alligator clips (optional)
- * Pure sea salt and distilled water
- * Copper wire
- * LED (optional)
- * 1.5 V battery (optional)

Procedure

Step 1)

Nano-coat one of the magnesium plates. Alternatively, one

can also use magnesium anodes 4 to 6" long or magnesium ribbon. Nano-coating magnesium is through the same caustic process as Nano-coating copper. For further info on Nano-coating refer to the KFWiki.²

Step 2)

In a GANS production box, position the Nano-coated magnesium plate opposite the magnesium plate. As with every GANS production, when using the anodes or the plates, position them 1-2" above the bottom of the production box. If they sit on the bottom of the box it will slow down or prevent GANS from being produced.

**Step 3)**

Connect the two magnesium plates to each other via a wire. Small holes can be drilled into one corner of each plate, prior to the Nano-coating process, that can be used to connect the wire to the plates. You can avoid drilling holes in favor of using alligator clips to connect the LED to the plates, however, it is very important to ensure you do not scratch the Nano-

coating of the copper plate when attaching the clip. The use of an LED light in the circuit helps to create the flow of energy between the plates. Connect the anode (longer piece of wire = positive pole) of the LED with the copper wire that leads to the magnesium plate/coil, and the cathode (notch or shorter needle on LED package = negative pole) with the copper wire that leads to the Nano-coated plate.

Step 4)

Fill up the production box (as in Fig. 1) with a 3.5-5% sea salt, distilled water solution (make sure the salt is not contaminated with any minerals). Place the box away from other boxes and reactors and leave alone for 7-14 days.

Step 5)

When one observes the deposit of the GANS at the bottom of the box, or the plates become too salty or worn out, it is time to harvest the GANS. Set the plates aside (remembering the polarity if you wish to use them again) and with a Nano-coated plastic spoon, collect the amino acid which floats on the water surface. Store it in a clean glass or plastic container.

Step 6)

Using a syringe, collect the white or cream colored GANS and the black GANS into separate jars. These color differences are different isotopes of the magnesium. One can see our color collection in this [video](#)³.

Figure 1. Magnesium GANS production box.

Magnesium is a softer metal and if pieces of metal have fallen off during the process, then strain it through a cloth filter.

Caution: Do not use too thin a gauge plate as the metal is soft and can break from deterioration with the Nano-coating process.

Should the GANS be washed after collection?

NO - When GANS is not washed it holds its energy strength. If using the GANS in reactors or patches, this is the preferred method. In patches it is best to match the salinity of the body or about 1% for best results.

YES - When using it directly with agriculture it is best to have a low salinity of less than 1%. This requires at least one washing.

- * Reduce premenstrual symptoms,
- * Prevent problems in the bones and improved bone health,
- * It helps assimilate calcium into the bones and plays a role in activating vitamin D in the kidneys,
- * Managing diabetes. It plays an important role in carbohydrate and glucose metabolism,
- * Magnesium is necessary to maintain the health of the muscles, including the

Figure 2. Magnesium GANS patches.

Advice: If the GANS production is slow, try moving the two plates closer to each other; Also, it is best if a small amount of electricity is used (about 1.5 volts) from a battery or power supply. As with an LED, connect the negative polarity to the Nano-coated plate and positive to the pure magnesium plate.

Usage

Magnesium is the 11th most abundant element (by mass) in the human body and is essential to all cells and some 300 enzymes. Magnesium ions interact with polyphosphate compounds such as ATP, DNA, and RNA.⁴ Magnesium is vital for the proper functioning of hundreds of enzymes. Consuming adequate magnesium can have the following benefits:

- heart, and for the transmission of electrical signals in the body. It has been shown to lower the risk of fatty build-up on the walls of the arteries as well as lower the risk of hypertension or high blood pressure,
- * Prevents or relieves migraine headaches,
- * Relieving anxiety. (Ware, 2017)⁵

Most magnesium is absorbed in the small intestine, so this might be an area to allow the energy fields to best work.

Magnesium Patches for Health

Figure 2 shows GANS patches with purple colored 'water beads' to improve health in certain areas. I wore these for about 1 hour at a time to observe results.

Lemon Tree

For application in plants, a ball loaded with Zinc and Magnesium GANSes was placed in the

8-year-old lemon tree (Fig. 3) that has produced very little harvest to date. It has been in the tree for only a month or two and will need to continue to monitor.

Observations

In both cases the observations are incomplete, but it is my thoughts that with more time very observable benefits will start to show up. Magnesium is

very important part of our health and the health of our plants. It is hoped that by sharing this, others might benefit from this information.

Acknowledgements

Much of this understanding is the result of my years with the Foundation and the teachings of Mr. Keshe.

VIRUSES: THE ENERGY PACKAGES OF THE UNIVERSE

- Herpes Simplex Virus -

by **Mehran Tavakoli Keshe**

Founder of Keshe Plasma Science and Technology for Space Applications

Introduction

The Keshe Foundation introduces new solutions through the teaching and development of the science of plasma technology. Such solutions are simple and harmless to any organism inhabiting this planet. One of the biggest threats to humanity (and to other forms of life) are viruses, and one of the most prevalent one is the herpes simplex virus (HSV). HSV, or herpes, is categorized into 2 types: herpes simplex virus type 1 (HSV-1) and herpes simplex virus type 2 (HSV-2). Statistically, it is estimated that in 2012, over 67% of the World's population (3709 million people, range: 3440-3878 million) aged 0-49, had a prevalent HSV-1 infection, which usually appears on the mouth, around the lips (Table 1).

An estimated 417 million people aged 15-49 (11%) worldwide have HSV-2 infection. Most oral and genital herpes infections are asymptomatic (showing no symptoms). Hence, many people are not even aware they carry it. This lifelong condition, like many other viruses known to mankind, is incurable and scientists report its relationship to other health conditions such as Alzheimer (Lövhelm H. J., 2015). However, the origin of it and the exact mechanism of its working, as this is also the case with many other viruses, remains a mystery to the modern medicine.

This This publication explains the origin of the HSV virus and how it develops in the human body - starts from the soul and the brain through the process of dreaming and ends where it

started - in the brain. The role of the skin, which in the understanding of the plasma science is an extension to the human brain, is described. The transition and mutation of the virus occurs as it travels through the digestive system to reach its other end - the anus and genitals. The herpes virus also nests in the hip of the man. Doctors and scientists cannot solve it, as its complexity and mechanisms have never been fully understood. Whatever therapy is applied, the virus eventually comes back. When its energy reaches a tipping point, it releases the energy back into the same layers and one has a flaring of the disease.

In general, herpes is a totality of the disease across the body of the man. This changes the approach and herpes with this new understanding of the Keshe Plasma Science and Technology are manageable, are reversible. The proposed procedure, which covers the entirety of the body, is proven to be effective and subsequent tests and clinical trials are needed to quantify it further.

Background

One of the biggest menaces to the human race is the herpes virus. The understanding of the modern medicine is that HSV-1 is transmitted by oral-to-oral contact to cause oral herpes, which can include symptoms known as "cold sores" but can also cause genital herpes. HSV-2 is a sexually transmitted infection that causes genital herpes. Both HSV-1 and HSV-2 infections are

Global total (males)	89	179	198	212	228	220	197	189	184	169	1866 (66%)

Totals may be slightly different due to rounding. Sex-specific estimates for Africa, Eastern Mediterranean, South-East Asia and Western Pacific were generated by applying modelled prevalence, fitted without stratification by sex, to sex-specific population sizes. Slight differences in prevalence averaged across all ages between the sexes for these regions are therefore due to different population sizes by sex.

doi:10.1371/journal.pone.0140765.t001

Table 1: Global and regional estimates of the number of existing (prevalent) cases of HSV-1 infection in 2012 by age and sex, in millions (percentage of the population with prevalent infection shown in parentheses)²

lifelong. According to (Davis, 2018), these two viruses have distinctly different DNA, and both cause oral and genital lesions. However, HSV-1 causes about 80% of all oral lesions and only about 20% of genital lesions while HSV-2 causes the reverse (about 80% genital and 20% oral).

Oral herpes infection is mostly asymptomatic, and most people with HSV-1 infection are unaware of it. Symptoms of oral herpes include painful blisters or open sores, called ulcers, in or around the mouth. Sores on the lips are referred to as “cold sores.” Infected person will often experience a tingling, itching, or burning sensation around their mouth, before the appearance of sores. After the first infection, the blisters or ulcers can periodically recur.

The frequency of recurrences varies from person to person. Genital herpes caused by HSV-1 can be asymptomatic or can have mild symptoms that go unrecognized. When symptoms do occur, genital herpes is characterized by one or more genital or anal blisters or ulcers. After a first genital herpes episode, which may be severe, symptoms may recur, but genital herpes caused by HSV-1 usually do not recur often. Herpes infections are most contagious when symptoms

are present but can still be transmitted to others in the absence of symptoms. Antiviral medications, such as acyclovir, famciclovir, and valacyclovir, are the most effective medications available for people infected with HSV. These can help reduce the severity and frequency of symptoms but cannot cure the infection¹.

According to the WHO's website¹, “in immunocompromised people, such as those with advanced HIV infection, HSV-1 can have more severe symptoms and more frequent recurrences. Rarely, HSV-1 infection can also lead to more severe complications such as encephalitis or keratitis (eye infection)”. The same report warns pregnant women that

“neonatal herpes can occur when an infant is exposed to HSV in the genital tract during delivery. This is a rare condition, occurring in an estimated 10 out of every 100,000 births globally, but can lead to lasting neurologic disability or death.”

Many researchers notice and investigate the causal relationship between the HSV-1 virus and Alzheimer's disease (AD). Work presented in (Bearer, 2013) concludes that the author in their

Figure 1: Herpes Simplex Virus Type 1 Infection.⁴

study "... satisfied Koch's 3rd postulate: the HSV causes Abeta deposition that would in concert with other factors lead to an AD-like pathology". In June 2015, Swedish scientists in (Lövheim H. J., 2015) concluded that "Among persons with a follow-up time of 6.6 years or more, HSV infection was significantly associated with AD."

Other works presented similar evidence (Piacentini, 2014), (Lövheim H. J.-G., 2015), (Agostini, 2016) and most recently (Itzhaki, 2018) who points to evidence in literature that apart from AD, HSV is also linked to senile dementia and that "... antiviral treatment causes a dramatic decrease in number of subjects who later develop SD ". Furthermore, Itzhaki in the same work, concludes that "three indirectly relevant studies deal respectively with schizophrenia, relating to antiviral treatment to target HSV1, with the likelihood that HSV1 is a cause of fibromyalgia (FM), and with FM being associated with later development of SD. Studies on the link between epilepsy, AD and herpes simplex encephalitis (HSE) are described also, as are the possible roles of APOE-ε4, HHV6 and HSV1 in epilepsy." (Itzhaki, 2018).

It is one of the contributions of this publication to explain, from the plasmatic point of view, that HSV virus correlates with increased risk of neurodegenerative diseases such as AD as it appears in the body of the man.

Viruses - the new understanding

The genesis, evolution and the mechanisms of many viruses present on this planet, which trouble humanity, are not currently understood. Viruses are energy packages which have the DNA strength of the **body** of the man and in that process, they interact with it. The energy packages which have the strength of the **soul** of the man interact with the DNA of the soul of the man - they are a leech onto the leech (human body) and they become leeching onto the entire structure.

Viruses don't have physical characteristics, they don't have physical entity, but they have gravitational-magnetic field strength in part of their composition that matches one of the

elements of the amino acid of the man (COHN); or it matches the elements that are connected to it, such as Iron in the blood, or Copper in the muscle, or Carbon, and the virus locks in. Once locked-in, it carries a massive amount of energy as it does not have a physical dimension. Virus in the plasma technology is a package of energy which mankind needs to understand.

In the space, humans will not die much of bacteria and infections, but will die of viruses - the energy packages without physicality. The present science has not managed to handle the simple viruses of this planet - those energy packages which have no physical dimensions to the amino acid, but they carry energies of the amino acid.⁵ This aspect can be explained similarly to the food cup experiment, also known as the **Orange Experiment**, in which four basic GANSES and their amino-acids are placed around a glass container with water (Fig. 2). In a CO₂ GANS production, the combination of materials of the air appears on the surface of the water as the amino acid (COHN), and when put in another tube, it becomes the basis of life. In such **food cup**, gravitational-magnetic fields are created, which pull down the gravitational-magnetic fields of the essence of the orange, or

Field Plasma

Replication Unit

any other plant or substance, into the water.

When the orange is placed on the top of the cup, the energy of the orange together with its taste is

transferred into the water contained by the cup. Because this water has a protein base, it connects to the protein-based body of the man, so it feeds the body with the energy of the substance. In this transfer of the energy of the plasma, one receives all the attributes of the orange - the energy, the taste, the smell, everything.

There is no need for the physicality of the orange, and when one drinks this water, it tastes orange. This confirms the energy transfer through the plasma structure and orange's amino acids. For example, let's assume that the Hydrogen of the orange's amino acid is equal to the Hydrogen in the water of the cup, according to the mixture of the GANSeS placed around the container. In the same way, viruses which are like this energy packed information contained in the water of the cup, leech onto human bodies.

To the present world of science, viruses are a menace, for which there is no solution. Any virus, any entity which has a dynamic plasma, has a funnel. Every virus has a dimension of the dynamic plasma - it is a structured energy pack. The plasma structure of the CO₂ GANS, or any other, is the same as the plasma of a virus - it has a strength capacity. As a first step, one has to find out what this strength capacity of the virus is. If one can measure its strength, then a system can be developed to work the opposite - gravitational to magnetical - to drain it, to reduce the virus' strength or one of the factors of the strength in it, which for example, matches into the amino acid Hydrogen strength. With this new understanding all viruses are reversible.

Herpes Simplex Virus - HSV

Genesis

Herpes originates from the brain of the man. It is caused by the release of the energy from the inner soul of the man touching the invisible memory part of the body of the man. While dreaming, one experiences various emotional states. If the dream is at the strength that endangers one's life, if the memory of it is at the strength that can jeopardize the life or imprison the physicality, this is an event which one does

not want to remember. Therefore, a field force in the balance of the memory of what is not to be remembered, is created. Because it is a dream, it has not manifested, and it remains a part of the operation of the soul of the man.

The energy transfer appears on the part of the body responsible for the verbalization of the unexpressed feeling, which is the lip of the man and this explains why, when one has a very horrible dream, the blister appears on the side of their mouth. This is the beginning of the process. The energy transfer from the source (inner soul and the brain) into the point of destination (the lip) gets captured in the salty environment of the layers of the skin. Think of it as a CO₂ box - two plates (one of the higher order) and the energy transfers through the salty water, to create a point of balance at the Carbon field strength to attract the Carbon from its environment.

The full process of the creation of herpes comes from the inner structure (memories in the brain) and this is why it goes back to where it came from. Since it has no memory, it wants the brain to remember the initial horrible event or a nightmare. This is called the heating temperature of a dream. It does not matter where one is in the universe, or on this planet, they get it; because human soul is the creator of it. The dream does not find the physicality at the time when one is awake that their eyes can observe. If in a dream, one gets captured and wants to escape, such frightening situation often wakes them up. The energy of the memory of this dream cannot be memorized by the brain, as it was not observed by the eye, and because in their dream one cannot speak through their mouth which is the point of speaking, this is where the energy transfers.⁶

If one has a problem with their son, as a man they develop a prostate cancer. The paper titled *ALS—A death wish which comes true*,⁷ describes yet another process, which directly originates from the soul of the man. ALS is a wish through the soul, which the physicality cannot handle - the 'termination of contract'.

Similarly, herpes is a condition created by the soul of the man but without the interaction of the physicality. Herpes goes back to where it came from (the brain), so that one remembers the

dream, so that it does not happen to them. Now it is understood why herpes damages or interacts at the memory side, because one wants to forget a horrible experience.

Mechanism

Every virus is an energy pack and it needs to be attached to an amino acid. Once it finds the energy in a structure which carries DNA, it can control itself, it can mutate to absorb more. It becomes a cell, a living entity. A virus looks for food to survive, it looks for energy to absorb. When it attaches itself to *Mr. COHN*⁸, it links itself either to the Oxygen - because it matches the gravitational field of it; or to the weakest element, which is the Hydrogen. It needs that match/connection, it finds that connection, but how does it enter the body of the man? It needs a weak point, it needs a point of entry.

The lip and the skin

One of the points of entry for the virus are the lips. Herpes are usually observed in these regions, around the mouth, because this is where the space gap is. In Figure 3, the external part of the skin is marked with D; while C is the internal part, the sausage, the breathing part, the mouth.

analogous to sewing two different materials together, such as leather and cotton, which cannot be perfectly put together, cannot be fused, because they are two different structures.⁹

Skin has three layers. Both, the internal part (C) and the external skin (D) have three layers. The bottom layers of each are linked up. But the three, the middle layers of the same salt content, because they carry the blood in the level of balance of it, they have a space gap. The layers are linked up, but they allow for the virus to come into this space gap and in this way, it finds a place to nest. Why herpes is usually observed in the corners of the lips? Because this is where the space gap is continuously fixed to one point, which moves when the mouth closes and opens. These points of flexibility are an entry point for the HSV virus, which then finds a nest. The virus enters into the middle layer of the skin and it stays there.⁹

HSV is an energy pack which is equal to the energy pack of the amino acid in the middle layer of the skin, which becomes a nesting-ground for the virus. Here we are considering a six-layered structure, not three - there are three layers of the

Figure 3: Lip - the entry point of Herpes Simplex Virus.

These two are two different structures. Area marked with B is the weak point in the structure, which can be compared to a woven chain. The same can be observed in Nano-layers - such open spaces, gaps between plasmas. It's

skin and there are three layers of the inner tube. This structure has a gap in which the strength of the memory of the dream, matches the field strength of a virus and becomes its nest. The virus which sits in the middle section of the outer

Figure 4: Cross section of skin and mucosa under the microscope: Normal Epidermis and Dermis with Intradermal Nevus (left); Histological section taken from the gastric antrum, showing the mucosa of the stomach (right).

skin, affects its salt content. The change of salt due to the energy transfer creates blisters on the skin. This gap is created by the disorder - the breakup between two sides of the skin. When the blister opens up as the salt content changes, it is like an eruption. The skin erupts, and the gap is created between the two sides of the eruption of the skin. Then another infection that sits in because of the energy level and you have all these what we call the virus of herpes, we call it herpes. Due to the dynamic fluid condition in the mouth, blisters inside the mouth are not as frequent.

This is why herpes of a given strength (HSV-1) appear only at the mouth. If herpes moves inside, it is a different story. The conditions in the mouth are different than in the skin - different acidity of all the enzymes and presence of other elements. Thus, the virus has to mutate to become stronger, that it can survive in these conditions. Through a cut in the internal skin of the oral cavity, the virus can enter the gap of the three layers of the oral mucosa. Some mucous membranes secrete mucus, a thick protective fluid. The function of the membrane is to stop pathogens and dirt from entering the body and to prevent bodily tissues from becoming dehydrated (Encyclopedia Britannica Inc., 2018). In order to survive in these conditions, the virus mutates and becomes stronger, it becomes HSV-2. The strength of the herpesvirus -2 is capable of coping with the composite liquids inside the body of the man, whereas the skin was slightly different.

The brain

In the human body, and this holds for all animals, the skin is a part of the brain. It is an extension of the brain. When the HSV virus enters the middle skin, it immediately travels into the brain of the man through the middle skin. Equivalently to the lip, where the layers of the external skin link up with the layers of the internal skin (mucosa), human brain is connected to the skin, but it works in a different dimension link-up. The virus through the middle areas of the skin moves into the brain because it is made of the same, it is the same transformation.

After it moves into the brain, the virus has the strength to sit in the part of the brain responsible for memories, and this is the reason we call it Alzheimer's due to herpes. This process could be compared to a frequency jammer. Similarly to jamming some radio frequency, the herpes virus has this capability at a particular strength level (in this case at the level of memories) because it came through the middle section, through the membrane of the body of the man. It has the strength which fits into the strength of the memory part, it jams it, and produces what we call Alzheimer's.

As we grow older our brain function changes and under given strength, it matches with the strength of the herpes virus which leads to total blockage. In wireless communication, one intruder is able to block the entire communication channel by jamming the particular frequency. Analogically, this is exactly how HSV works.

When the frequency of the source matches the frequency of the jammer, there is no communication. Whatever information sits in the brain becomes inaccessible due to the blocking 'noise'.

HSV originates from the brain of the man itself. It is the release of the energy from the inner soul of the man touching the invisible memory part of the body of the man. That is why it goes back to where it came from, that's why it affects the memory part.

The digestive system, anus and genitals

Herpes also appears inside the body of the man. It can be observed in different internal areas - at the entrance (oral cavity), esophagus and stomach. All these are made of tissues of different composition and hence one should look for signs of herpes in the opening of the stomach (sphincter), stomach, the small intestine opening (pylorus) and in the opening between the small intestine and the large intestine (ileocecal valve).

When the HSV virus enters the middle layer of the oral mucosa, it is able to travel through the entire digestive system, as mucosa is a mucous membrane that lines the inside of the digestive tract from mouth to **anus** (Houghton Mifflin Harcourt, 2016). Herpes which moved, through the mouth, from the outside skin into the mucosa of the digestive system becomes stronger because it mutated to accommodate to a stronger dynamic system. In this process, the virus gains energy - when it mutates it becomes stronger.

Herpes moves down the middle layer of the esophagus, the stomach, the small intestine and the large intestine. It ends in another point, which similarly to the lip has two phases - the phase of the dynamic dimension of the internal organ and the skin of the man - the anus. This is how herpes moves from the mouth directly into the genitals and in doing so, mutates to be stronger. As mentioned in the Background section, HSV-1 causes about 80% of all oral lesions and only about 20% of genital lesions while HSV-2 causes the reverse (about 80% genital and 20% oral).

HSV-2, on the other hand, mostly appears on the reproduction organs of woman or man. One aspect of the structure of these organs - the external skin and the internal tube - are analogues to the lip. It is an interface, a point in which the two triple-layered structures join. What originates from the inner layer of the outer skin, through the space gap, moves inside the tube and one gets herpes on their genitals. The virus can then travel in the opposite direction to HSV-1, but one might not observe it in the mouth.¹⁰

The bone structure and the hip

Body of the man carries a bone structure, which contains spinal cord, hip, skull and the rest of the skeletal system (Figure 6). Structure and the role of the hip can be compared to the role of the cup in the food cup experiment, explained in the Background section. In that experiment, the energy of the orange was transferred into the water. Up to now, doctors tried to sort out the problem of HSV-2 by using creams. However, in the interaction with the creams (or ointments) and other medicine, the virus moves (and hence mutates) but it cannot be eradicated; symptoms are partially addressed, not the cause.

Figure 5: Human Digestive System.

With the new research which was published recently, one understands, and this supports what was explained years ago, that the hip of the man becomes the cup. The herpes virus nests in the hip of the man. This is why doctors could not solve it. Whatever the therapy and treatment, eventually it comes back. When this cup's/hip's energy reaches a critical point, it releases the energy into the same layers it originated from and one has the flaring of the disease.

Processing

Herpes virus does not originate from outside, it is the creation of our own soul. The human body is a composite of different GANSes. It is a container filled with GANSes and every substance which enters the body, is transformed into the GANS state. In plasma technology

doctors process various health disorders by creating conditions for the transfer of energy. This is done via use of static and dynamic plasma systems. Such systems are 'fueled' with different GANSes to create conditions for the transfer of energy. One needs to understand how to create such conditions and what effect this has on the human body.

Doctors and scientists working with the plasma technology, on numerous occasions, demonstrated how this can be achieved. They managed to deplete the salt from the foot of the coma case¹¹. To do so, the urine of the female subject was collected, the GANS of it was created and added into the GANS patches. What was expected to be weeks-long process, was processed within days. Another example of the same principle is the breast cancer case presented in the '*Cancer solution in exchange for peace*'¹². To remove Calcium, the seed of that particular cancer, two patches of Calcium GANS in the appropriate ratio were applied. The same principle applies to the removal of other metals from the human body and the same applies to HSV.

To create the correct transfer of energy, firstly the energy of the seed of the problem needs to be recognized. The understanding of this process is analogous to the way homeopathy works - 'like cures like'.

Thus, to prepare the GANS water for processing herpes, the liquid of herpes itself, when it flares up as blisters, needs to be collected in whatever quantity available and mixed with 50% CO₂ and 50% ZnO GaNS¹³ water. The field strength of the CO₂ GANS present in this solution, provides a link with the physicality, while ZnO GANS is a link to the brain and the emotions - the origin of herpes virus.

It is also possible to collect the liquid of herpes and mix it with CO₂ GaNS and liquid plasma to make a base GaNS of it. The herpes GANS water can then be used in processing. Every HSV virus is unique in its strength, it is as unique as our fingerprints and hence the liquid plasma of it, is only to be applied on the person of whom it was collected.

Figure 6: Human Skeletal System. Source: Pixabay

The simplest way to process HSV is not to use patches of different ratio, but to apply it on a cotton bud at the point of rupture. Three times a day, for no more than half an hour per session. This creates a fast energy transfer which covers all the affected parts - lips, the entire digestive system, the hip, genitals and the brain. This procedure can be followed for a number of days until the virus is gone. It is worth noting that the herpes processing is not preventative. One can only apply it when the outbreak occurs, when the 'identity' of the virus is known.

In general, herpes is a totality of the disease across the body of the man and this changes the approach to eradicate it. Herpes with the new understanding of the Keshe Plasma Science and Technology should be able to be managed, should be able to be reversible.¹⁴ For the first time, the entire process on herpes is understood. Why do we see herpes on some points of the arm or the leg? This relates to the situation in one's dream or real life, where the skin was physically damaged, punched, compressed. Herpes then manifests in the point of weakness of the middle layer of the skin.

Discussion

To date, the origin and the exact mechanism of the herpes simplex virus was never fully understood by the present science. This publication explains these processes in detail. Now we understand from the Alzheimer's, all the way to genitals how herpes interacts and mutates. HSV-1 and HSV-2 are the same, just operate in a different gravitational-magnetic field strength - one is stronger, the other one is weaker. The stronger one is capable of surviving in acidic, enzyme-rich environments, and hence it travels through the middle layer of the mucosa (a membrane that lines various cavities in the body and covers the surface of internal organs) of the digestive system, to reach the anus.

When the virus gets underneath the skin, one can observe some dots which indicate the energy transfer. Herpes, in every level with a new knowledge of the Keshe Plasma Science and Technology, is reversible. By understanding this knowledge, no virus should be a danger to man, even in space.¹⁵

Herpes can be transmitted physically - if one carries the same emotion and kisses another person on the same space gap between the skin and the lip - the inner tube - the virus is transferred into the middle layer of their skin, because it already carries a copy of the human DNA. However, it is created internally, through dreaming, by the soul of the man. In a condition of interaction with other salts, a huge pack of energy from the soul of the man is released

which cannot find a physical position. This is why isolated people of the jungle, tribes living far from civilization also carry HSV. The trigger can be the dream of a tiger or a lion endangering their life. Thus, one can perceive the herpes virus as one of the outcomes of the adaptation to the changing environment - mutation. In order for our body to mutate, the information, the energy, the new structure, comes directly from the brain. Therefore, for the process to complete, the change needs to find its confirmation in the physicality.

placed between the two plates and forms an environment for whatever field strength is to manifest in it. Life on Earth started in the salty waters of this planet. In the same way, the human body, via its brain and the different concentration of various salts, created all its organs in order to cope with the surrounding environment. Not only organs such as liver or kidney, but also the color of the eyes or the skin manifests through the same process. The HSV mutates as it travels through the human body and a trigger for it to travel back to where it came

In the case of herpes, the impulse for the change comes through the process of dreaming and emotions associated with it. These emotions get 'translated' into the body structure and a virus' energy is transferred into the lip - responsible for the communication or confirmation of the frightening situation one witnessed in their dream.

The virus, same as our body and any other entity in the Universe, mutates according to the environmental conditions. As it travels, it adapts to the enzymes and acids encountered in its environment and mutates in the same way as the human body mutated throughout centuries to adapt to the changing environmental conditions. It can mutate because of the salinity in the layers it travels within - this can be compared to the GANS making procedure, when the salty water is

from, comes from its nest - the hip. When the virus in the hip reaches a certain energy level it becomes stronger, as compared to its origin; and based on the fundamental law of plasma (the stronger feeds the weaker), the energy transfer is through the skin, in the direction of the brain.

The details of the herpes process - the importance of the layers of the skin, their space gap, salt content and other elements is explained in detail in this paper.

Two-thirds of the world population suffer from HSV and up to now its mechanisms were not understood. Now we know it is the creation of the soul of the man. The way every human, through their soul creates various internal structures - muscles, heart, two lungs, intestines and other -

it is now understood that herpes is a condition of the soul of the man that releases a huge pack of energy and this seed flowers to become a physical, amino acid-based structure, capable of mutating inside the human body. Not only with HSV but with any virus, one needs to understand how it travels, where it nests and what is their gravitational-magnetic field strength. To eradicate amino acid-based viruses, one can use any of the presently known GANSes, which match in gravitational-magnetic field strength one or more of the amino acid's elements. Different viruses have different characteristics and operate in a diverse spectrum of fields. Herpes virus, in any shape or form, be it the herpes of Universe or the herpes of planet Zeus, now you can handle it.¹⁶

Knowing the origin of the HSV virus, the door to eradicating it using the same mechanism opens. The virus mutates according to the environmental conditions, through the energy transfer, and by introducing the energy of the virus itself into its environment, the new environment drains its energy. This is how its cycle closes and because it manifested in the physicality it eventually 'mutates out' of the human body and does not come back. The process involves collecting the liquid from a

blister, because the virus continuously mutates and in order for the processing to be effective, the system needs to be tuned into the correct (actual) field strength of the virus - as the virus mutates, one needs to mutate with it. In the Keshe Foundation, viruses are understood as packets of energy, which leech into the structure of the physicality of the matter state of the human body - what we defined as the GANS state of the body of the man.

Man, in space will face more problems with this kind of energy packages, than with anything else. As one travels with the highest speed across the universe, they are touched by many kinds of viruses. The spacecraft itself, in interaction with the different field strengths of the universe - like the way Earth in the interaction with the Sun creates different lights - creates different energy packages. Some of them, might be at the strength of the amino acid or the amino acid strength of the soul of the man. When you come to the new space technology, now that we take human race outside the boundaries of Earth, we have to solve all the problems of the man. Virus is an RNA, without the physical DNA. As an energy pack which maintains its shape, a virus has a DNA of itself which is a memory of itself as a field.

CO₂ GANS WATER EFFECT ON SCRATCHES

by Marcin Z.

November 26th, 2018

Two weeks ago a cat scratched me. For a few days the wound looked normal and everything indicated that it would heal normally.

18th November morning the heat has become inflamed. There was a swelling and a red streak coming directly from the wound in the direction of the hand. For two consecutive days I instilled CO₂ water directly on the wound to relieve pain and eliminate the infection. In addition, as far as possible and skills "I pulled out the fields" trying to balance the damaged place. On the third day the swelling clearly decreased, the redness completely subsided. The finger heals normally and in a few days there will be no trace of any wound.

“

INCREDIBLE LIQUID PLASMA

by Arthur, UK

January 8th 2017

Amazing liquid plasma helped me when I injured myself at the gym; I had serious back and shoulder pain and I just could not move. I think I damaged bone and muscle tissue of my back. I think nerves too!!

So I mixed in one patch CO₂ / CH₃ / CuO₂ / Zn / Calcium egg shell plasma and Amino acids from CO₂ / CuO₂ / CH₃ / liquid plasma. Clean water NO MASS. Water in patches only is more than good enough! And I made weaker second patch with CO₂ / Zn only for FIELD flow between them.

I put one patch on my back and other weaker patch on my chest and I went sleep for 8 hours and wake up totally blessed; pain gone, muscle tissues repaired, feel happy and amazed!

You can heal serious injuries within few days time! Remember take your patches off from time to time, and spray yourself with CO₂ and Zn liquid plasma to purify body fields.

Thank you Keshe Foundation we love you!!!

“

ABC of publishing in Plasma Scientific Journal

A. Prepare your work

Firstly, you need to prepare. You can either document the work which has already been done and perhaps even presented by you in the testimonials meeting or website, or you can plan a new experiment. You should always be clear on what you are trying to achieve and document everything as you go (label and take pictures).

B. Write your paper

Gather all the notes and pictures together and when writing your paper put yourself in the reader's shoes. Do not assume anything but present everything from the start, explaining every aspect of the experiment, which may not be obvious, and remember that "a picture is worth a thousand words". If needed, relate to other peoples' work by referencing their articles, websites or other openly available resources. Start by downloading the Scientific Plasma Journal template and short guide for authors available at <https://support.keshefoundation.org/faq.php?section=science-journal&qid=189#q189>

C. Upload and submit

Once finished, upload your Word, OpenOffice or PDF file onto one of the cloud or files sharing services, or even onto Facebook. Go to <https://support.keshefoundation.org> and from the drop-down menu select Plasma Scientific Journal Submissions and press Go. Through this website, you can either submit your work, ask a question or access resources and the FAQs.

Any question? Get in touch with us via

<https://support.keshefoundation.org>

The full version of this article, author guide, and templates also available at:

<https://keshefoundation.org/education/news/kf-ssi-education/plasma-scientific-journal/plasma-scientific-journal>

Submit your publication today! Be the Creator and shine for others to see your beauties.
