Position of the soul & what are our dreams

by Keshe Foundation

259th Knowledge Seekers Workshop
<https://youtu.be/aQFNLeLQxgY?t=1639>

The very first times when we started speaking about the position of the soul I explained to you the stereo bone. So, you will have your stereo bone, you have your vision, you can pinpoint the position of your soul. If I draw this in a different dimension it is very simple. You have the two hemispheres of the brain, you have the two eyes which cross, and you have the two ears. If you draw the line right across in a very specific way, you should be able to see the dimension of the soul and the position of the soul.

We always had a back system and we always gain access out of it. In the future when a man grows in the knowledge you will understand something very simple. Why when we have a dream, we have a vision? When we have a dream about our mother, or our loved ones or our children, why do we see visually, why do we connect with the noise and the place? It is because the soul of the man sees through the eye of the man and in that process of achieving and reaching other souls what he gets back it comes through the vision, so we have a vision of it. Man, up to now have never understood this. This absorption as a limitation of the soft tissue of the eye and the liquid within the eye of the man is a transformation of the level of the soul to the level of physicality. Many conditions when you do not even have the eyeball the structure which is built by the ancestors in the position of the conversion sits within the eye of the man. The physicality of the eyeball is more or less irrelevant in comparison to the soul. This is why our soul's portal is in the eye of the man. That is why everything we see as a dream or the connection between our soul and understanding in connection with other Souls goes through the eye of the man at a given strength.

Are we dreaming or is our physical life part of the physicality dream? Do we live two lives, one life in the dimension of the physicality strength and one in the dimension of the soul of the strength of the universe? When you close your eyes and you call it to sleep and you have that dream which means you use the dimension of the portal of the eyes to be maybe in 10 different dimensions, but you only want to choose one. The same thing happens while you are walking you live the two lives, the life of the physicality, the soul of the strength of the matter state of this planet and then the dimension of the soul of the universe. The portal of the soul of the man operates in two dimensions and it is him who has to choose and at the time when you blank out one frequency which is the frequency of the physicality, the other one which has been walking around the time is still in touch. We decide today I want to listen to Channel 4 and tomorrow to Channel 3 and Channel 4 was the dream I wanted to see what the mother is saying and Channel 4 is the other, Channel 2 is my father and I convert that channel to vision through them coming back, transferring the knowledge through my eyes, as the physicality of the existence of what I see.

The whole structure of the skull of the man receives other strength. At the level of the vision of the man that we see our loved ones or we see we are in the environment, we see through the portal to the strength of the soul, through the vision of the eye of the man which in return from the soul of the environment and the soul of the loved ones we see it converts back into and becomes the vision or memory or what we had a dream of.

The Eye – doorway to the soul

by Keshe Foundation

<https://youtu.be/aQFNLeLQxqY?t=1188>

What do we call a portal?

A portal is an eye into the future, an eye into another dimension.

The soul of the man has its own portal. How the physicality has created the portal as ways on transportation for its communication, for its bandwidth strength of the software on higher or lower order.

If you look at the structure of the physicality of the man and the position of the soul of the man you will see the portal. It has been there, it is a portal that we as a human being would never consider it. If we look at the skull of the man we see within the structure of the skull of the man, the soul of the man has made the portal for itself, in a very clever way. An eye into the dimension of the physicality, an eye in the dimension of the soul, the eye of the soul. If you look at the position of the portal and draw a line when you go across it, what do you see? If you take the totality of the wavelength or the bandwidth of the eye of the man, you cross the position of the soul of the man. The soul of the Man has chosen a dimension of the soft tissue. The rest of his structure is considered to be well absorbed. When we look into the neural system of the eye when we look into the structure of the eye and the soul of the man we find one of the most important portals of the life of the man himself. If you can increase and understand the strength of the soul of the Man and its operation, the whole universe becomes visible to you.

In the Universal Community, many bases are like this, it is all closed. They have used the strength of the soul to go beyond the dimension of the physicality of the structure of the boundary of the emotion or what we call the brain. We speak about the soul of the man and a portal - the eye of the man. At the same time, this skin follows the whole structure of the physicality.

Do we need to have a visual direction to be able to see or can we direct our vision for us to be able to transfer through it the strength of the soul of the man? When you understand and when humanity comes to mature enough, you will find out that the physical eye of the man in his body as physicality is one of the most powerful tools that a man could have been given for the transportation and communication of the soul with the universe. Vision, the eye of the man, is soft tissue access.

If you look at the position of the soul and if you look at the other dimension of the brain of the man, the soul sits right through, it looks down the eye of the man. Up or down slightly you will see the direction of the soul. We are looking at the side view of the head. When you look at the frontal view you will see the eye of the Man looks directly into the soul of the man. Is the vision a portal for communication for the soul of the Man without the restriction to the dimension of physicality to the strength of the other souls? Would we see the soul of entities of the universe

through our soul, through the eye of the man, but not through the physical operation of the man; through the soul of the cells of the physicality of the man that it converts to the vision of the soul of the man. Then it comes to one point: is there a part in the brain of the man which can convert such information for us to understand? And then it comes another dimension of the understanding which the vision of the man has to and will open up to that we have already been aware of the existence of the life beyond the life of the man in the universe. The information has been filtered at a given level that is not and is above or below the side vision of the man in the dimension of the physicality of the matter on this planet.

Medical professionals confirmed the existence through the medical knowledge, the machinery and the systems which confirm the correctness of the science. We put the parallel in the dimension of the soul and understanding the work of the plasma. This brings one thing very important to all of us. We have created systems and technologies to confirm that what we see is what it is because we have transferred the knowledge into the physical dimension of the understanding of ourselves. We send aircraft onto Mars, onto Moon and we take still pictures of that frame at the vision of man not at the strength of the vision of the universe.

We understand that there is a process of conversion, but the man has made systems to confirm according to the time of his understanding, systems to confirm it is correct and we have accepted it. It is time to walk and understand that the work of the physicality of the universe is not at the level of the vision of the man. It is at the vision of the full-strength spectrum of the soul of the man.

We just convert it, we just take the part which we need. "The God is the creator of all and the man is the converter of some." We convert very little of it, but the love of the creator expands over the whole spectrum. What you see as an ant to another creature of the universe is a moving soul. Does not see the physicality. This is what we have to understand and in the process of the life especially when you come to portals and a portal to transfer the soul of the man or the dimension of the physicality of the man, these things will count very heavy. It counts very heavy because you have to decide what is the space gap that I can exist and

not necessary in the dimension of the physicality of this planet, this solar system, this galaxy, and this universe. If I take the same soul which gives the physicality of the man with two arms and two legs and put it into another universe's strength dimension it could become nothing. It becomes one sun, it covers the whole space of that universe. Because it is the energy of the system that counts and not the length of your fingers or toes.

Then we come to one fundamental understanding. When we make these portals, when we make these systems of transportation of the soul of the man into the dimension of the universe, do we need to control them at the strength of the soul of the man on this planet or do we give to the soul of the man the freedom to choose in space its point, its confirmation of existence?

"I made man in the image of myself." The image of me on Earth is two hands and two legs and the image of me on Planet Zeus is 20 arms and 40 legs. Which one is my image or is my image dependent on the environments of the manifestation? Do I still communicate and be in control of the space dimension of the soul of the man in that position? I still can look through that portal and I can still be in touch with the mother, with the sister which I knew on the planet.

Does the soul of the man live, communicate and will forever communicate as long as the dimension of the physicality of the man exists through the portal of the eye of the man? Does the body need the eye, or has it made itself two holes to be able to escape through and be able to do its work, to communicate with the outside at the strength of the vision of the man? Now for the first time, we understand what it means and how the dream comes to be visualized by us. We actually see our eye has always seen the soul of the mother and has transformed it in a physical dimension to the structure of the mother even through the life of the mother in front of you.

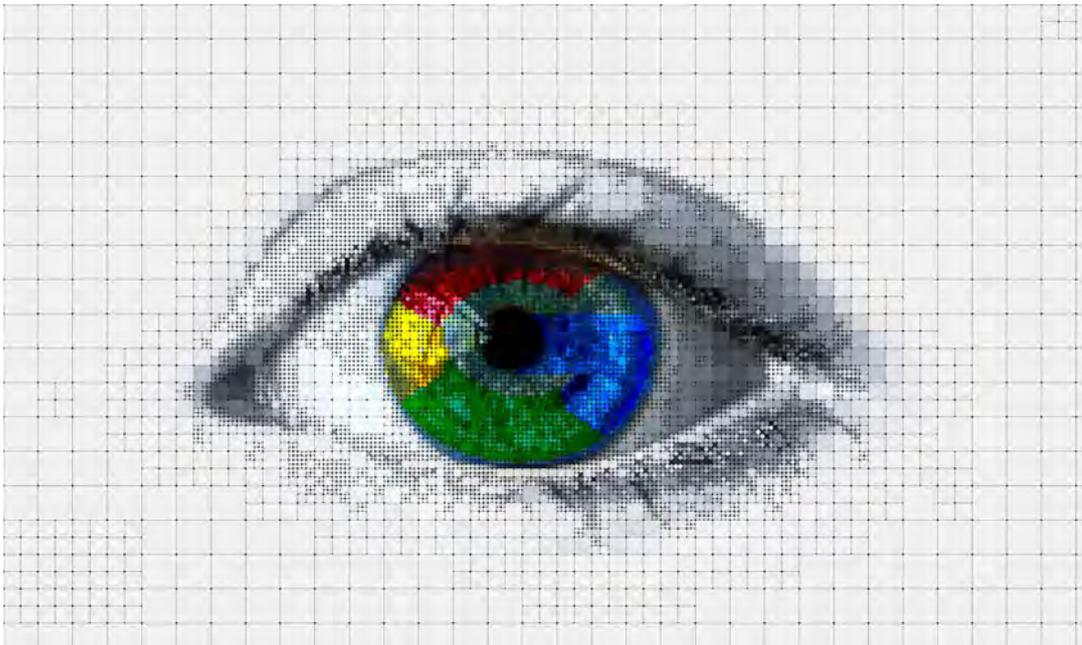

Then we come to understand how far Man has fooled himself in confirmation of the physicality. In so many ways we have changed the strength; at a certain strength we see the physicality of the mother but in fact, we always observe the soul of the mother and when the mother changes the position and leaves the physicality we still see the

same soul and we transfer it to the vision as the mother. This is the truth of our creation which man has never understood.

It is like a house with bricks and wherever you go you do not see anything outside except where you left two windows. By the brick walls, we block ourselves to see the outside and the outside to see us. But we chose a window to be the portal for us to be able to see. So has been the man himself. Nothing changes in what is happening outside in the reality of the dimension of existence, it is just when we decide to look through the window.

All the information from outside has always come in through the window and all the information from inside has gone out through the window. We made the house in the same condition and position of the skull of the man, we gave it a portal. We call it a window and we made it transparent. It is us who have chosen to put the shutters that we do not see when it is dark or when it is cold and in the eye of the man we created the eyelashes that this time I just want to work through the soul. We call it the sleep time, that we do not need the dimension of the information in the dimension of the physicality that we do not want to see the color, the bedroom, the roof, the ceiling or the sky. We only work through the dimension of the soul of the man.

The work of the soul of the man never stops. Just because you closed the shutters of the windows of the house it does not mean the Sun is not shining and it does not mean that the light bulb in the house is not working.

You have decided to close but, in reality, the field strength above that shutter moves in, the heat of the Sun comes in. So is the soul of the man. But in the condition of the eye of the man when the information comes through the cycle of the vision in the socket that is another intermediary conversing the

information of the soul of the man to the dimension of the physicality of the mother as you know.

When it comes to the dimension of the space, how do we recognize the passengers of the universe if we carry the dimension of the physicality of the man and their strength of the field of physicality? The astronauts of the future will have a huge problem to separate themselves from this. Those of you who travel through the structure of the soul of the man will enjoy the beauty of the creation across the universe. Then the question goes do we still need a spaceship or do we travel on the ship of the space of our soul and conquer the universe? Now I have offered you one of the biggest mysteries of mankind. Because you are so physical you have to see it to believe it. Now you understand how seeing has been the tool for you not to see the reality because it has kept a man in the dimension of physicality at the strength of more or less the calcium of the life of this planet. Slightly different strength of calcium can create the transparency of the vision of the man. When I piled it up I call it the skull and I had thickened it a little bit I call it the skin, but this is the strength I want to travel, and I made portals for it to travel in the spans of the universe.“ It is for those of you who understand to decide where you want to go and to many of you it will take you some time to understand and many of

you have already understood because I have reached and touched the soul to carry the information.”

In a way if you look at it we have to do something while the soul is alive

does not matter on this planet or in the universe.

What is better to teach the other souls? To serve, to elevate the soul of so many. Then the question comes: what you will do when you become a passenger of the space and in the dimension of the

soul of the creation you become part of and you become into a new dimension. Do you become a teacher or you become a thief? This very much depends on the strength of the physicality you choose, or you live on the extension and the dimension of the soul of the man. The physicality needs feeding and if you cannot find continuous feeding, you become a thief.

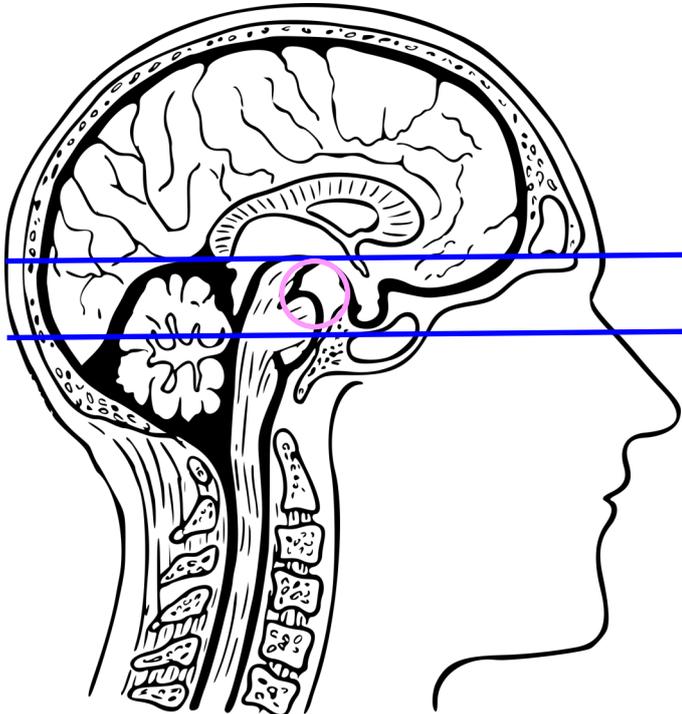

Fig 1. The position of the soul of the Man. (Highlighted circle)

The soul becomes a teacher. Does not feed it, but it teaches and as it teaches it receives. Is it what I have given that it has become, not what it has taken from me moving from it. This a very big important point for those of you who start understanding the work of the soul, the understanding of the work of the portals and understanding that the portal of the universe does not have to be in the city but it is in the eye of the man to the vision of the man at a strength of the dimensions of the physicality of the space and time of the existence.

Next time when you dream, and you say I had a dream just think. I did not have a dream. It is what I shared with the soul and the soul allowed me to be to share with. And as the Sun shines and it spreads its light its fields, at the same time shine on Earth as it shines on Jupiter and on Saturn. It is the space of time that it confirms its manifestation. As you are dreaming of or communicating through the dimension of the soul then you are yourself another dimension as a star in the galaxy receiving the lights and the fields of the universe. You take as

much as you need, and you give as much as you do not need. You exist at the same time on Earth, on Mars, on Jupiter and you can be observed in another part of the universe as that shiny dot you call the Sun, we call it a solar system.

The man has always been in touch with the totality of the universe. It is us who have chosen. We just filter the physicality, we still let the process and the rest in the back and in so many ways explain why the brain of the man is so big and it is such a big recorder of everything. It is not recording just what you see with the eye of physicality, it is recording also what is happening with the eye of the soul of the man with the rest of the souls. It has to remember it because the same as you remember you have been to Africa 20 years ago and you saw the lion, it has to remember it has been into the other universe and has seen such a thing because the other souls which it is in touch with have been there and they want to discuss something.

The man has lived a life of schizophrenic, but he has never known, and as I say the word schizophrenic does not exist it is the beautiful people then you understand it is a beautiful soul. It is the soul of the physicality and soul of the universe which exists within the soul of the man. Maybe now we can start going to the next step and understanding with creating these portals, are we creating the portals for the soul of the creatures of the universe which becomes visible to the soul of us not to the physicality of us or we still want to be in the fantasy world of building a spaceship to see the dimensions of the universe?

When you say "I had a premonition, I knew this was going to happen, I have seen this before and now it has happened!" Ask yourself a question. Did the soul through the dimension of the portal of the eye of the man has already seen it; you just come to see it in the dimension of physicality or has created it for you to see the consequences of it.

This is the beauty about when you understand the totality of the creation and as messengers of God is our responsibility to enlighten. It is for a man to take the step, to confirm, to understand and take actions by it, due to the pleasure of it, not through the punishment of it. The time of punishment is finished. Those who still choose a path of punishment are thieves of the soul of the man.

It is for the man to understand why and how and the reason for the sight of the man. The sight of the man is a communication line, a transformation line which covers both bandwidths: the dimension of the soul in conjunction with the operation of the universe or the condition of the interaction with a dimension of physicality. It transfers and translates both lines at the same time and it sends it to the same pigeonhole which is relevant to it. Then the portal we make we will see through the eye of the soul, not through the eye of physicality.

How much more do we have to teach? Now you understand how close mankind is becoming to the point of detachment from physicality because now he has a new night vision of the soul and just because it is dark he could not see up to now. You are given the understanding and the vision of understanding of the totality, the night vision is a totally new day which never ends. At night you wear the night vision, and at day time you see, but the picture is the same. At the same time, you have to decide, do I keep the night vision and physical dimension of the day. Or do I start to understand I have the capability to translate both at the same time? Very much like women, multitasking. The man has been a man, only one task, physicality. Now, what happened when you become a woman and become multitasking that we can translate the vision of physicality and we can communicate and translate the vision of the soul at the same time because they come through the eye of the man. We created, the body has created this to fool the man and that is why we became so physical.

“I see - I believe”. What about if I manifest myself in the strength of the soul of the mankind that every man can see the totality soul of the Creator?

“The teaching of today is a turning point for the human race. It is for the man to understand. In the depth of space, the man decides the position and time and the way he likes to enjoy. You want to put a swimming suit on and go in the depth of the ocean or you want to put a suit on and go in the dimension of physicality in the depth of the space? The dimension of the soul within the physicality does not change. It still sees through both dimensions, it does not matter what suit you put on.”

The Creator has created the totality, the soul is pure, and it gives. It is the physicality which plays until it melts and there is nothing and then it blames the

Creator and the soul. In the vision of the physicality of the man those who understand and those who see through the soul of the man to the dimension of physicality when the soul receives and becomes part of the dimension or tries to become part of the soul, this brings change in the color of the eye. This happens in the time of creation when the man has to open its eye of the physicality from the womb of the mother and the time of when the soul finds no interference through the eye of the man through the dimension of physicality at the point of departure from the physicality. The soul of the man leaves the body of the man through the eye of the man at the point of death because this is the way it always has come and gone, he knows the door. In the future when the man comes to understand more he will develop systems that will show the process. It is the least path of friction that it creates the dimension of escape.

When the soul of the man opens this path at the point of departure to amalgamate between the balanced fields of the universe the translucent light will create or manifest itself at the point of departure. The man must become aware of the time and space how. He cannot capture it and say I captured the soul, but you can be aware of its existence and the field forces of it. It is not the energy which suddenly explodes at 18 Hiroshima bombs, but it is a subtle departure of the totality of the field to the least path of departure, it pushes through the eye of the man.

“I think today we have explained something that has changed, and we have reached the totality soul of the man. All the created things on this planet with the teaching of today. We will see the change and evolution in the direction that we want from now on. As I always say when we teach we do not need to use the word but our vibration of the fields of our soul touches the totality soul of all the created, not on this planet but on those who are there to learn and to be enlightened. We will see the change, we have started the change because it is taking too long; millions of years to change are too long.

Through the conduct of the man will change for the rest of the creatures on this planet. We have brought everything together in a beautiful way, be it from the leadership, be it from the man, be it from the science of the man, be it from an understanding of the knowledge of the creation. The time is right, and the time is now and this now for us is not this second, it is the process that we have started the change.”

THE SOUL OF THE MAN

NEVER SLEEPS

Even in the daytime when the man is awake and looks through his eyes the soul is still in communication with the others and what is coming back, and it gets registered within the structure of the physicality. The soul of the man never sleeps, and the eye of the man never stops converting. When we travel in the depth of the universe and the vision of, the condition of visuality or this condition of the rest and sleep disappears because now our resting time and asleep time is totally dependent on the rotation of the Sun and the Earth.

In the space, there is no Sun and you are in dimensions of no time, no space because that space is yours there is no other space you can be in. A lot of you who do not understand when we speak about no time and space in the world of the universe because the time and the place in the space are you; nothing exists before or after. When you are in the depth of the space and you do not have these parameters which have literally controlled the operation of the physicality of the man, is there a time for rest? Or do we live through the eye of the soul of the man? Do we go through eight-hour cycles and 16 hours of waking because the 8 hours in the depth of universe is one second and this is less than one second? It does not exist. Or do we go as part of the understanding of renovation, regeneration or replacement? Do we take and wait 16 hours to recharge during the rest time or do we recharge as we use, and we take from the environment of the universe as we need that we do not need to recharge, therefore we do not need that rest time?

We go back to the origin of us on this planet, there were no weeks, there were no days, there was no time. The

difference with the world of the space when we go into it there is no lack of energy because as we use we replenish. Actually, we do not use, we tap into the universal energy as we use it, it gets replaced. Do I need to stock food that one day I am going to go hungry in space? The food is, and it will be there as I need it.

Then it comes one fundamental question: what is the man going to do with the life of no tiredness, no hunger, and no dimension? How do we spend our time in the depth of the space? When you watch some of these futuristic movies they put people in capsules of being safe for a hundred of years, 200 years until they get to the destination. 100 years of the life of man is nothing in the new dimension of space and if you leave them loose, now that we understand how the soul works, you do not need to bring anyone into sleep. You bring balance between the soul of the man and the soul of the physicality of the man, that they work in a synchronized way.

"I'm a nuclear physicist, I'm a scientist by training, by nature and to me when I look at the soul of the man and the soul of the physicality of the man it explains to me a proton and electron. The electron moves and takes energy as it needs to find the position in relevance to his proton. In the depth of the space, the life of the man will be the same, the physicality will absorb what it needs from the soul to keep it in a position and distance from its creator. Then do we need to look for food in the span of the universe or actually we become another work nature - electron and proton?"

FREEDOM FROM PHYSICALITY

by Keshe Foundation

If you are not happy in the dimension of physicality, you do not need to imprison yourself into it that you confirm and conform with it. This is important for many things when the man comes into space. We learn the new freedom, but we have to learn with this new freedom of physicality comes a new principle, a new dimension of totality but the integrity of mine, not what it is other's. And it goes back to the first commandment "Thy shall not steal".

I have seen people mixing GANsEs and things and I sit down, and I look, and I say, "My God they are still busy with it, they have not seen".

If you want to replicate the work of the universe and understand it does what happens in the universe, not what you want it to be because you understood. We have started off the development

of the final phase of the spaceship program and hopefully, in due course, you will see unconditional flight and the structure of the soul of the man. In the newer space system, we have followed word by word. It is very much up to now, blocks by blocks for you to learn that you can put the next block before you can have the whole structure. The new space system which is now the design and development is the completion of totality. It is the replication step by step.

We will not release when, how, who and where is going to be shown but when it manifests itself every soul on this planet will feel it. In the past days, we have moved to the final stages of the unification of the man in the universe. When the systems inside come to the full operation it will replicate the operation of the soul, not the physicality of the man, even though we need the

physicality to convert the soul. The final phase, the final system is very simple but extremely complicated because it has to take into account everything that leads to the creation of the soul.

You have an egg and a sperm on their own, but when they share the fields, in sharing they have rubbing off which creates a position of collecting the spares which becomes a new server and again the connection and interaction of them becomes the creation of more cells as it comes out of the friction of interaction plus what the environment gives that at the end it ends up with the soul of the man and physicality.

The man has entered the final phase of understanding, not the work of the universe and how to travel the universe but to understand the work and the travel of its own soul and nothing more.

“When you read my work if this is planet Earth (Fig 1. A) the Unified Field Theory tells you one thing: magnetical (Fig 1. B) and gravitational (Fig 1. C) are both the same, depends on which point, in which direction we are looking at.”

If you stand and look with the two eyes you see this coming and going and you say it is one field. If you look another way it looks red or white and then the opposite way is white or red and then you say they are two

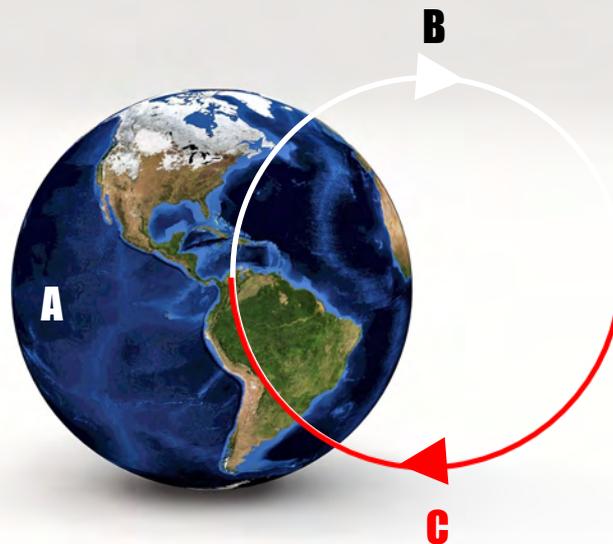

to decide, are you getting or are you giving or is it coming to you to receive as you need it, or you are giving away what you do not need?

Those who made the world of Unified Field Theory showed an absolute lack of understanding of the totality of the creation, even though they live by it every day. Is it on a red shift or is it on the white shift? In fact, it is only one shift and it is the same light, the same lane. It is just dependent on the point of the observer.

principle, it is exactly the same teaching, nothing has changed. You just changed the name of the Earth and the Sun to the change of the man and his physicality to the position of the soul of the man and another soul. In essence, it is the same entity, the same work of interaction of the fields of the universe.

So, we come back to the beginning: what is the purpose of the soul of the man?

Figure 1.

259th Knowledge Seekers Workshop
<https://youtu.be/aQFNLeLQxgY?t=3785>

different things. In reality look at the true structure of a car. You put red lights in the back and the white lights in the front it is the same car. It is unified. It is the same thing. It depends has it passed you or it is coming towards you. As it is the same car it is unified.

This is the Unified Field Theory which has become one of the enigmas in the world of physics showing the lack of understanding of the man. And then if you understand this, change the car to the soul of the man. You have

As a man in the space, this makes a lot of problem for you. Is this all next to me coming to me to take from me or is this soul on this side going to give and how purple is this and how blue and white is the other one? You decide your reaction and in fact, with respect to both, you are taking your position. If you look at this, the same

PLASMA 101

CARBON-14 THE GIFT FOR MAN TO STOP THE KILLING

by Keshe Foundation

260h Knowledge Seekers Workshop
<https://youtu.be/eMfXjilNYg?t=9959>

What you see in the history of the man did not start with the man when he came out of the water. And it is the same with what is connected with the amino acid which is connected to the dimension of the life which took shape and place in the liquid substance of this planet. Trees, the vertical people mainly understood and relied on the path of the fields and that is how they grow. It is not something we cannot do, plants do, they absorb the ray of light of the Sun; what the Sun gives them, they do not go and steal. They do not go and take another package. And even if it means to come to the end of their lives, they shall not steal. They die in the place they are. We do not see them catching armies and fighting the others

The position with the condition of creation of life which leads to the dimension of amino acid when it interacts with Iron, in majority of the cases, it creates a condition of need for dimension of the faster absorption of the energy and that has come to the point to take from the others faster packages of energy. And then it comes to eating up bigger packages, bigger and bigger packages because it can. It does not matter if fish eats little planktons, or a fish eats another fish, or a man eats another animal because now it is so normal "I kill a pig, I kill a cow, so I kill another man, it is another form of life, it is finished". The structure of the killing has come from the outset of the need to survive.

What has happened, what we have seen, and we hope it will never happen in the world of the creation again, is this disbalance of the nitrogen, carbon, oxygen, and hydrogen. In certain ways when there is a misbalance this creates a very fast flow and a huge reduction in energy. But it still needs to sustain its structure. When you have billions of this put

together, you can take some from the environment, but you cannot take forever.

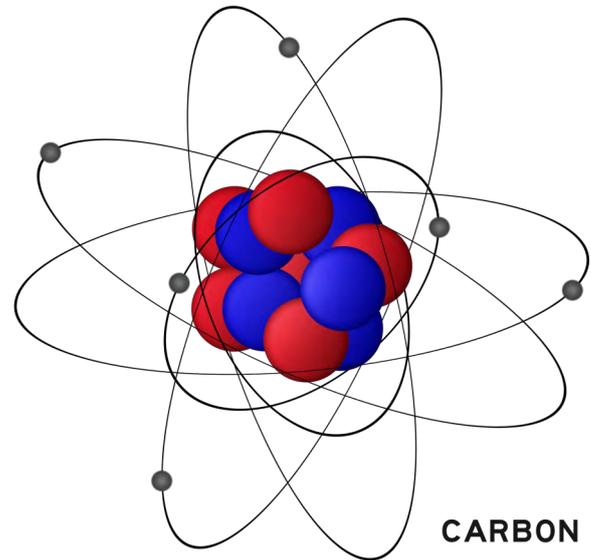

And the problem mainly with animals, in the animal kingdom is that they layer each other so much, this is the top skin, middle skin, the other skin that the part in the middle cannot receive because the top layers take all. So now for its existence, it needs external intervening, a fast conversion that it survives too. And do not forget it is connected through the soul of its structure to the soul of the man.

The soul of the man could not give to do, so has physicality taken over to feed? And now it has taken so much hold that if you are an ant, you are a man, you are a cow, a fish, they all take packages, it is the easy way. It has gone into the mainstream RNA of the life of the horizontal people.

Vertical people have solved that problem but adding one element to their structure that it takes fields from the universe. But the universal and environmental condition dictate its life. And it has accepted it. I do not kill but I stand the summer and the winters, I lose my leaves that time because then I live in harmony with my environment.

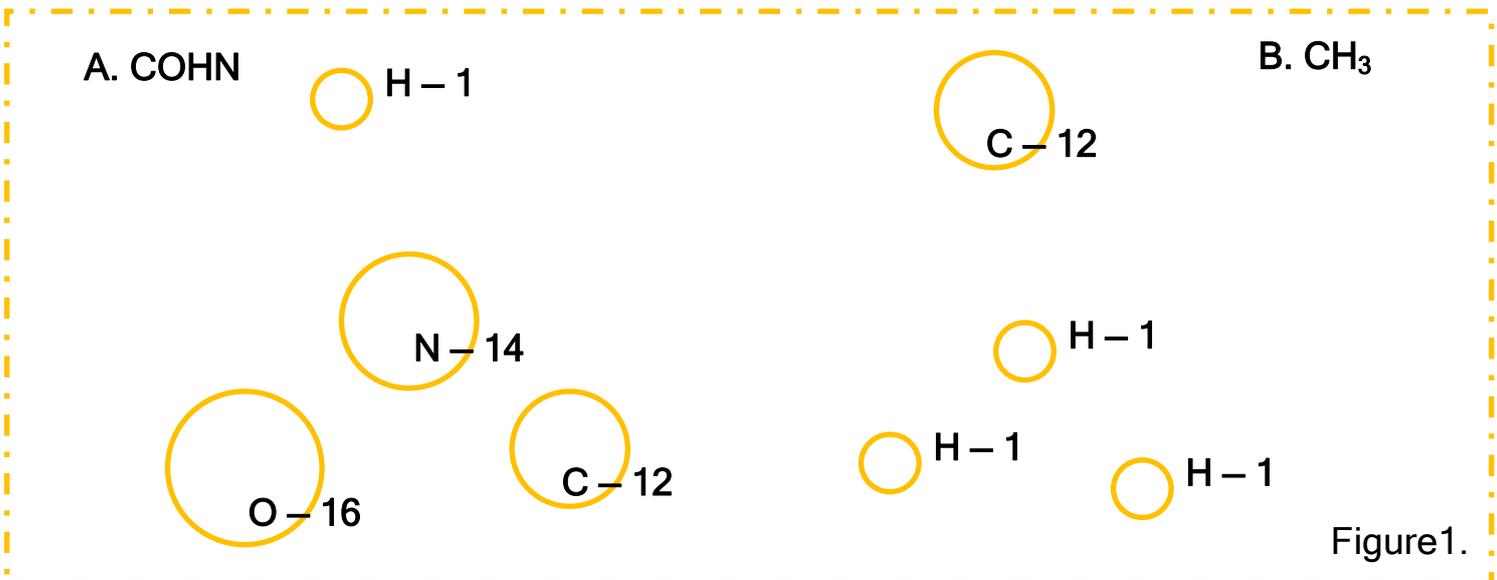

But horizontal people have bypassed this. We need to add something to the structure of the environment that this adding up brings a man to the same dimension as the vertical people. The physical movement of vertical and the physical movements of horizontal is totally different and that means a different package of energy. And that is why if you look, many horizontal people have picked up on certain things especially that they do not need to go for other things. I get my thalamus and thymus in my body to do the conversion of what I need from one thing.

The man eats the variety of vegetables, meat, and everything to get the full spectrum of the energy it needs for total structure, but certain animals only eat one thing. Always the same fruit, the same flower. But their thalamus and thymus have, in conjunction with each other, created a condition that it converts again. It is still the same monkey, it still has the bone, it still has the liver, it still has the kidney and everything else. How come everything comes out of one food. Because they have found an efficient way to guarantee their existence because nobody else eats what they eat, what they have chosen to eat. They have created a condition in the field that can convert this to anything they like. The arms and legs do not fall off by eating the same food all the time.

and years. His body has learned to convert, and this is part of the structure of the new technology. To substitute that in the structure of this planet gradually we walk man to live, to understand it can take from the fields of the environment.

It is the deficiency in the structure of the RNA which has affected the DNA and, in that structure, stays the same. A mouse has similarity 95-99% to a human. We all came from the space, from Mr. COHN (amino acid). Our base is the same. We have to change something in the 99% of COHN of

One of the richest men in the world eats every night burned steak with nothing. Day in and day out. Literally, steak which is burned to the skin, totally burned, a solid piece of meat which is like wood. With all the wealth this is the only thing he eats. But he still thinks the same, he still has the same physicality and he has done this for years

the horizontal people to make them become like the vertical people, that is all that is missing. And it sits in the structure of the soul of this amino acid which has linked itself unfortunately to Iron.

There is part of the technology which I do not teach, and it is known as Carbon-14.

Carbon-14 has a lot to do with the behavior of the man, and if one day we understand this, we can change the man. Why Carbon-14? The vertical people have Magnesium. In horizontal people, we always suffer from Iron (Fe), Zinc (Zn) and Copper (Cu). COHN values from 42 to 44 energy balance of the fields. Iron varies from 55 to 58. Now you see where Carbon-14 comes in (58 minus 44). Is this gap which makes the horizontal people dangerous? It is too big, and it needs to be fed for the whole physicality to exist as the horizontal people.

The closest we get to this is CH₃ (13,5 - 15,5). This is one of the reasons why in my work I introduced CH₃. It is not for you to be, it is to close this gap. This is part of this problem. CH₃ is between 13,5 and 15,5, depends on the energy balance of the Carbon and Hydrogen.

The construction of life is very simple. You have a CH₃ (C - 12, H - 1) and you have an amino acid (COHN: N - 14, C - 12, O - 16, H - 1)

whatever. This is alloy because the field strength in it can create a binding. When you put your copper here nanocoated to make your GANS of CH₃, the carbon energy release confirmation from interaction from the environment is the Zinc mixture with the Copper. That gives you the Carbon. Then you have a problem. Then your problem sits with the Iron.

Your CH₃ is a gravitational magnetic field orientation of Iron. So when you put it with the amino acid you already have a common denominator in the field strength that when it creates the fields in the interaction you have the amino acid which is balanced with the iron and in being balanced, iron feeds itself and does not need to kill for it.

Your carbon has a gravitational magnetic field strength of the copper in conjunction with the gravitational-magnetic field of zinc, so it is directly connected to your muscles and to your nerves. Now you produce a condition that is connected to the iron. It is complete. You have every connection you

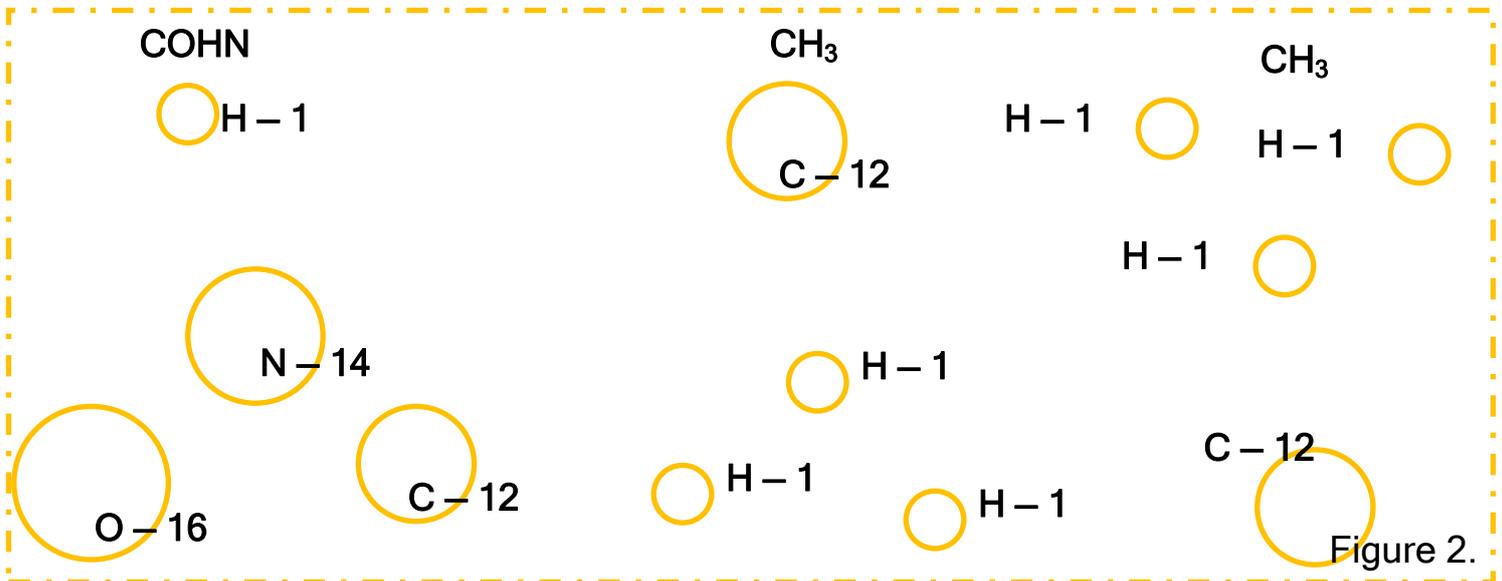

Figure 2.

On the amino acid, you can see a very balanced base with very low top. (Fig 1. A) and CH₃ with a slow balanced base with very high top (Fig 1. B). In fact, when you lock it in it becomes very much balanced. It gives in near enough.

Composing one COHN with 2 CH₃ will balance near enough 56 - which is the energy strength of the Iron (Fig. 2), so will the amino acid still need to link with the Iron or does it behave and mimics the balance of it? There is a secret in the whole creation of CH₃ the way we produce it. There is an iron in the middle, alloy materials on the side, zinc, nickel or

need. You touch the soul of the man, you touch the physicality of the man, you bring a balance in energy transfer between the matter state plasma and the field state of the matter.

Man does not need to kill.

This CH₃ elevates the soul of the animal, this CH₃ elevates the physicality of the energy, this CH₃ connects to the blood of the man through his eye. It has everything. You connect the CH₃ with the amino acid of it. You never understand what gift you have in your hand. I have given the biggest gift to mankind to walk away from killing.

Earth's

Polarity Change

Thomas

Q: I have been interacting with the fields my whole life. I am only 28 and my first vision was when I was 12 years old and I almost died that weekend and I saw a vision that I physically saw 10 minutes prior to. And what is going on in this planet right now from what I am being shown is that the Earth is going to be going through some changes and you have mentioned this in the past as well and just recently scientists have measured the magnetic pole shifting rather speedily than usual and I am just wondering if the portals you are planning on are going to help initiate this transition that the Earth is moving on to.

Mehran T. Keshe

A: Not really, these pole transformations happen all the time, for millions of years. It is not the first time. If those of you who understand geology, the scientists by digging the earth layers can tell

you when the poles changed. The change of polarity will not change anything because the body of the man is made of plasma condition. We just transform into the same thing.

The Sun which is the creator of this planet changes its polarity every 11 1/2 years. Do we see the man changing? Do not forget Einstein came up with something called the funny things when one atom changes the other one changes polarity. When you move one North to South the other one changes South to North.

We are used to this polarity changing dimension of our Creator which is the Sun which is more powerful than us on this planet, so the change of polarity will not change anything because we are in a condition of the plasma, we are not in the condition of the magnet that we have to twist. Every structure of

the man when the polarity of the Sun changes, it changes automatically. We are not aware of it. Every eleven and a half years, in 23 years we have a full cycle from North to South and South to North. How many of us change? Why should it be any different when the Earth changes? It will be the same. If we were a solid matter magnet, yes, we would flip open and we would walk on our head. But unfortunately, or fortunately, we are a plasmatic condition of the structure, so as if flips, it flips, nothing will happen.

We might feel a bit of discomfort on the day, but it happens over so many hundreds of years that I think our great-grandfather felt the first motion and then our great-grandson will feel the final position for this. Just always be realistic and understand the totality then you do not need to assume or listen to those who just try to confirm something which is not there.

The polarity of the Earth yes, it will change, it has to go through, we see it in our reactors. I have explained it in the papers and books we published. The first time happened with the first reactor we built, it was amazing, it was shocking, I could not understand. The thing stopped, it will not move. I thought I burned the motor, I did this to it, I do everything, and I sit there “what have I done wrong?” and the thing starts pulsating again. But before it was going clockwise now it is going anticlockwise.

Why? What did I change? I changed nothing. And the field forces of it are so huge if you try to obstruct it we cannot obstruct the change of the polarity. If you go back to some of the teachings, you will find, I have shown the first metal reactor we built in Belgium. It damages the pin

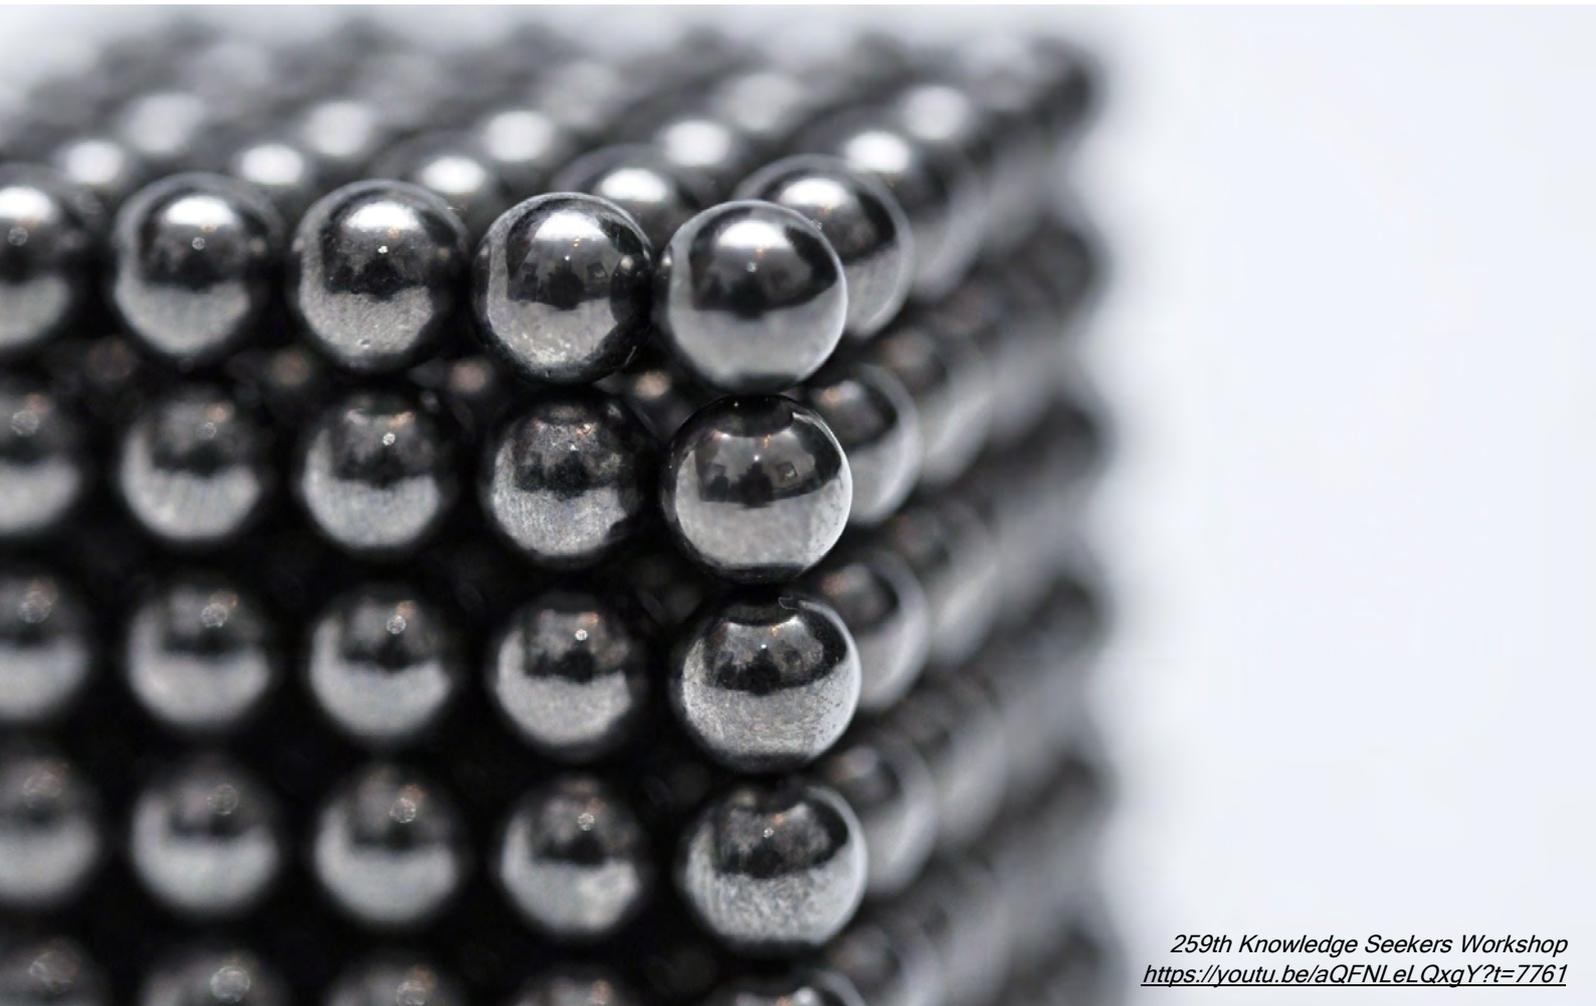

because of the strength of the magnetic field forces. I had to straighten it and again it happened. To confirm that the magnetic field forces are so strong that this ball weighted, one kilogram or so and stainless steel twisted on its pin. The ball was in the matter of state, it had to go through the change. But the body of the man is in the plasma condition.

Sometimes this change attracts and interacts with other entities which are of the matter state in the universe. Would this polarity change attract new meteorites to Earth because now it is a slightly different strength? It is not always the same strength. Or do we see a slightly different color of the sky because of the change of polarity now the fields are rotating? If you run reactors, and some of you if you run dynamic double core

reactors, you see this very clearly in all the experiments. We run a matter state. In plasmatic condition especially for example what we saw with Austrian team, the fluid rotation, if they create the second magnetic flow in the plasmatic condition you will see the water will change the direction of its rotation because of the field forces on the central plasma or the soul of the ball. Would it change anything in the construction of the water? No. It is just that the field forces will convert. But will it touch the soul of the man? In some ways it does.

Thomas

Q: I was more wondering about the actual coincidence of these earth changes that you have mentioned that are coming in the near future and sort of this pole shift is one preceding the other...

259th Knowledge Seekers Workshop
<https://youtu.be/aQFNLeLQxgY?t=7761>

Mehran T. Keshe

A: It is just coincidental, but it has been there. We are late by the transformation of the change of the polarity of the planet by a few hundred years.

It should have happened some time ago according to the cycle and does the change of polarity attracts, creates a new condition to pull newer structures and we see their rise in the motion of the meteorites and

asteroids towards Earth or actually move some of them away from meeting us? It does affect, it does work, and it is part of it.

When the Sun changes the polarity the whole structure within the solar system changes so we do not see much difference. But when the Earth changes its polarity it affects the field interaction with other entities which are smaller than itself in its environment. At the matter of state which reflects it because Earth has two combinations of the magnetic gravitational of the plasma of center core and the inertia of the matter state.

If the dimension of matter state of the change at the point of the change of the central core matches with another entity it is like a magnet, it interacts with it.

It literally becomes like a virus, it chooses and it comes.

There are a lot of studies done by scientists that we see very much in time and the coincidence of the change of polarity with certain activities on this planet, in respect to interaction with the rest of the solar system.

What is important is if you open your knowledge and understand and as the polarity of the Sun changes, the polarity of the galaxies changes. It is the same structure and that structure creates sometimes conditions which are not there, and it creates it but, sometimes we see changes and directions in the whole structure of the universe and it is because of the structure and the condition of the polarity of other universes which are on this planet.

The other universes change and as they change their polarity it affects us, does not matter how many trillions of stars are in there,

our universe in the unicos is a speck of dust even though it thinks it is very big. When a man becomes knowledgeable in the dimension of the strength of the soul then becomes part of the unicos. He can travel all of the spans of the universes.

Man will achieve that; some men have already achieved that in the past. Those who are enlightened to the rest of the knowledge of the creation did not happen to have a degree as professors or doctors.

At the University of the soul of man, there is no certification.

CIBRIU

by Keshe Foundation

In an upcoming conference with the Space Agency's around the world in the few months' time, these are the things that will be considered. The new Space Agency which will come by the collaboration of the work of not only the space agencies but the Keshe Foundations of these nations including as part of it, then you become responsible to teach the scientists at NASA and the Russian space agency and the rest the understanding of the plasma and the level of what we teach. Then you will find out they have a lot of problems until we can show, we can manifest.

When we have set up the CIBRIU which is the name for the new space agency setup, literally standing for China, Iran, Brazil, Russia, India, the United States Space Agencies. We are not looking only to bring scientists from NASA. First come the scientists from Keshe Foundation who have developed the space technology in the background.

We merge the space agencies of the nations and the Keshe Foundation works of the space technology because it is the responsibility of you to teach them, there is another to that world team now. It will be a collective space agency as part of the spaceship program of the Keshe Foundation.

Part of this is for you to open the eye of the space scientists of the present into an understanding of the work of the soul of the man.

In so many ways with the confirmation and establishment of CIBRIU, we bring the work of the science of the soul of the man into the work we do. The creation of understanding the new technology and transferring the knowledge the way we have taught to become wise to it.

Many of you started building the space systems, you understood it, you are building spaceships to the fine lines which I teach and many of you do not understand and some become anew, you become the teachers of these agencies, you become the teachers of these new sciences.

In this process it is easier to teach the scientists of the new space era that we have moved from the physicality of the craft and we have moved from the physicality of the planet Earth we have moved from the physicality of the body of the man to the dimension of the creation which is the dimension of the soul of the man without tangibility.

What we see in the next level by building the space cities we show one of the main considerations and that is to create a space where is the point of interaction of the man and the soul of man with creatures and soul of the creatures of the universe. We have to have a guest room and acceptance room. Somewhere we can provide leisure and somewhere we can provide the environment of the beauty of this planet to be seen, to be shown.

We bring the soul of the man of the universe to be guest at home even though they have been guests here for a long time. Sometimes you get on a bus, you sit on a bench somewhere or you come across a man and start talking and then you realize you know each other from childhood, you went to the same school or you live in the same neighborhood. And you talk about this and that cafe and sometimes in that, running around in that environment you have met but you have no memories of it. In these space cities now, you are given the memories to remember. The man you met on the street in such a place was a traveler of the space as you did not know. Now you can connect, we had lunch together, but he looked as to be eating to the conformity of you for you to be happy. But it is there for him to see the soul of the man.

“By opening up this new space agency, these new the space areas with the space cities, we are not in a way inviting you to come and see the new magic, it is not the new Disney World but, it is the world that makes you dizzy to understand it has always been there. They have always been with us. It is us who have not understood. You have two legs and two arms under the atmospheric condition of this planet and you carry the amino acid of this planet and then when you go into planet Zeus and you get the dimension of the physicality of the appearance of what you could be there. In creating the portals, we allow the passengers who made themselves to be in the dimension of Earth to show themselves in the original dimension of their point of creation on their planet. Then we see the true soul and the creation of the time and space of the creation. If many of you think I can, I will see aliens and I can say what it is. My friend, it is a very good guess.”

When we create the condition then we see the neighbor we knew, the man we saw on the space in the dimension, now this is his true face, its true physicality in the dimension of the creation. The change in the coming time is so rapid that mankind

has two choices: carry on with the stigma and sticking to bodies in the past or accept a new and a present future of the science. Many will have the remanences of Earth. Now we are educated to see, we are developing a knowledge of the universal structure not in the matter state of the man to be able to understand the reality and truth about creation and not about ourselves. The minute we start looking back to see about us we have come to the same point as man has been up to now.

My work is to change the soul of mankind, the process cannot stop.

Working through the space program of the spaceship will bring humanity to balance. We brought the knowledge eleven years ago to Iran and now we balance in China. If you look at the setting of the CIBRIU is to bring the balance at the beginning that it lets the rest to be balanced. The man has to understand what mistakes he has paid and made, for it to change.

It has taken so long to bring the education and to get educated. If we would have brought this technology and this knowledge even 30 years ago mankind was not ready that all of them benefit by the same way that there shall not be any inequality. All these had to be equal and we brought the knowledge of what you call communication, internet, radio, television the way I'm talking to you across this planet to be able to deliver that this time everybody gets the same thing. We never left men alone we just brought a man to be in the position where when the message comes the totality understands.

We could not bring this knowledge and science not even two years earlier. Now for the first-time mankind is there to understand to change the soul of totality.

TRANSCRIBING'S WORLD OF FUN

by KF SSI Transcribers Team

This is my personal experience and testimonial, in regard to transcribing the KSWs of Mr. Keshe. When first asked to do transcribing and editing of subtitles for YouTube recordings, it followed shortly after I had written to the Universal Council stating that I had a strong urge to assist them in the English language. A simple thank you note came back, in response. A few weeks later Flint asked for a meeting in Zoom and said that a little bird had told him I might like to join the Transcribers Group. I said yes and the testimonial begins. After some basic training with Libby and a lot of trial and error, I settled into a schedule of dedicating a minimum of 20 hours a week to this service. I had adjusted my day job hours to allow for that time. From my past experience as a monk (Search: 7th. 1 N,1P,1R Workshop, for that story.) I was fully aware of the importance of accurately and painstakingly “getting it right”, no matter what it takes to do so. I knew from the outset that these teachings are of Universal importance, not just for many generations of Earthly humans. How grateful I feel, that I can transcribe these teachings just hours or days after they are delivered live by Mr. Keshe? Words fail me.

What's the payoff? You may ask. Well it certainly isn't money, because that's worthless, in reality. The real payoff for me, has been the gift of in depth understanding, what is revealed when one carefully studies these teachings, line by line, and the skillful way they are delivered by Mr. Keshe in reciprocation with the Knowledge Seekers, soul to soul. Reading a book, cover to cover, in one sitting, is very different to carefully studying it, in depth. Furthermore, transcribing has allowed me to create a plasma bubble around myself that allows detachment from worldly affairs and family crises, like an oasis in a harsh environment. Strangely not a complete shut off from the physical world, but a peaceful, calm inner voice saying; “No need to react impulsively when such important service is being done.” It's like a meditation but not exactly the same, because it involves lots of interactions through the senses, emotions, mind and intelligence, not just silence or seclusion. It's actually devotional service, which is the eternal and natural constitution of my soul and all souls, in my humble opinion.

In conclusion, I must recommend having a go at transcribing to all Knowledge Seekers as a means of understanding the workings of our soul in relation with our physicality and the universe. As a way of actually feeling the two way, giving and receiving plasma fields. As far as I can detect in my present understanding, at least, they become as tangible as those felt when working with any dynamic reactor system.

Your humble servant,
Doug MacDonald.

OPENING A PORT HOLE (TO SERVE)

Mr. Keshe shares his soul when he visits graveyards, hospitals, when a hearse drives by, when a bug dies and when he creates the weekly knowledge seekers workshop, and many other ways that I'm not aware of. By re living, as a transcriber, in such detail and at length, the creation of the creator of the Knowledge Seekers Workshop. Your soul within your mind interacts, on soul level in a most intimate way. You'll understand. Your in the mind/soul of the creator and the mind/soul of the creator is in you. You re live it thru the soul of Mr. Keshe, however momentary, briefly or more frequently later on, while you do your work and intermittently between times of your transcribing.

Whose says don't copy? That's what transcribers do, as accurately and concise as possible. Yes, it can seem tedious, even frustrating at times and a lot of work in the beginning. Like when trying to get fields to link up or interlock or create a free plasma and light. So without hesitation start to serve your one nation, one planet one race for world peace by transcribing, translating and teaching the new science, new ethos and new language being introduced, Lei Feng style. Future generations will thank you very much, as Mr. Keshe does now, the future is now.

And please don't quit for a lack of pay in matter state. Teaching the soul of physicality to serve does not compute when thinking like this, rather enter the port hole of universal service you choose to open. Now, do you want ten minutes or do you want more? Take as much as you like. This is all part and parcel of our introduction to the universal community, that no man be abused due to a lack of knowledge. So, in so many ways, we choose to open this portal, (to serve). Portal guaranteed by universe to open as long as unblocked by you in your position which is manifest by serving. Again, your Lei Feng as is Mehran T. Keshe. Do similar fields link up? It's rather elementary my dear Watson. Finally, rephrasing an American statesman, ask not what Keshe Foundation can do for you, but what you can do for Keshe Foundation. Furthermore, giving and serving is key to opening the portal and new dimension of understanding of universal knowledge, (to serve).

Welcome Aboard fellow travelers.

Proudly and humbly step forward to bring universal knowledge and peace to this planet. The soul of the universe is observing and will support your intentions to serve what doesn't appear to be, but in reality is, the totality. Oh, almost forgot, be ready to receive.

Respectfully submitted by

Another soul in motion, traveling the universal ocean, of fields.

DECORATIVE HANDMADE PLASMA PYRAMID
1 PC FOR 99.⁹⁹ €

The orgonite Decorative Handmade Plasma Pyramid can be your companion for your working desk, providing you with the best energetic balance.

DECORATIVE

Use the products anywhere, at home, in the office, during travel. Easy to maintain, simple rinse with warm water and wipe dry with a cloth or a napkin.

Enjoy the balanced plasmatic environment with the newest Decorative Plasma Products brought to you by the Chinese Keshe Foundation Research Team.

DECORATIVE HANDMADE PLASMA COASTER
2 PCS FOR 49.⁹⁹ €

The Decorative Handmade Plasma Coaster will happily hold your cup of tea, coffee or just the simple glass of water. Buy one for yourself and one for your loved one.

Available on:

Universe in a bottle –

'cola bottle' plasma reactor

Researched and published: 2005-2006

Author: **Mehran Tavakoli Keshe**

Director and Founder of the Keshe Foundation

Through the presented system, one can achieve the wonderful properties and effects that one sees in everyday life in the Universe and on Earth.

The development of this new technology

has become possible through a new understanding of the creation of gravity and ability to replicate it in a simple system.

Newton managed to measure the force of gravity, Einstein spent his life trying to explain its shackles on the matter. For the first time, not only the method of creation of gravity is fully understood; it is also replicated within the center of a hydrogen-based reactor. The world of technology has always worked hard to overcome gravity through propulsion with combustion engines and rocket fuel, plasma systems achieves this result by simply manipulating forces of magnetic fields rather than trying to

overcome them by brute force of, for example, propulsion.

The 'COLA BOTTLE' plasma reactor

Building the reactor

The process of building the cola bottle reactor, as the one presented in Fig. 1, is very simple and only requires the following:

- » Two to five pieces of bare, copper wire (electrodes).
- » One plastic clear bottle with a screw cap.
- » 1/2 cup of lemon lime soda.
- » 1 tsp. of KOH (potassium hydroxide).
- » 1 tube of clear silicone/hot glue.
- » 1 multimeter.

Step-by-step procedure is as follows:

- Cut two to five holes on the side of the plastic bottle.
- Insert one electrode (a conductor through which electricity enters or leaves) into each hole. Make sure the

Introduction

The purpose of this experiment is to broaden our horizon of understanding to realize that everywhere in the Universe, there is a plasma field flow in every state of matter and beyond, same as it exists at the level of solid state of matter (electricity flowing through a copper wire). What is presented in this paper breaks the laws of the known physics and the reader is able to perform this experiment to find out for themselves that we are submerged in plasma fields that are observable and measurable also in the matter state. Energy production is just one aspects of this experiment through which we begin to understand the creation of gravity.

electrodes do not touch one another - as they are independent of each other, this creates an open circuit that is closed by the field interaction of the environment inside the bottle.

- Use silicone or hot glue to seal the holes around the electrodes.
- Take the 1/2 cup of lemon lime soda and mix it with 1 tsp. of KOH (the so-called Kt Liquid) and allow 10 minutes for the catalyst (a substance that increases the rate of a chemical reaction without itself undergoing any permanent chemical change) to perform. This starts the hydrogen ionization process, where this process replicates the working of an entire spiral arm of a galaxy.
- Pour the solution (lemon lime soda & KOH) into the bottle and screw the cap on.

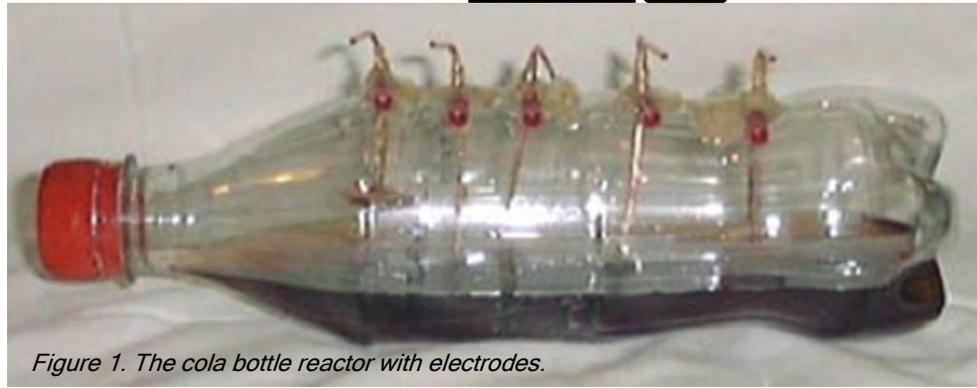

Figure 1. The cola bottle reactor with electrodes.

- Wait 15-30 min.
- From this point onwards you can take the multimeter (set it to measure millivolts) and read the energy output from the empty bottle.
- Take the solution out of the bottle and put the cap back on the bottle.
- Wait 15-30 min and repeat the measurements.
- To further experiment, take the cap off of the bottle and the energy output will increase because it can then suck in the energy from the surrounding environment

(this all happens on a microscopic atomic scale and is invisible to the eye). The dynamic plasma reaction that replicates the mechanics of an entire galaxy completes the circuit between the electrodes in the bottle and produces energy.

- Experiment more with it and find out the highest output by touching the different electrodes.

Observations

Testing the cola bottle reactor with the multimeter shows

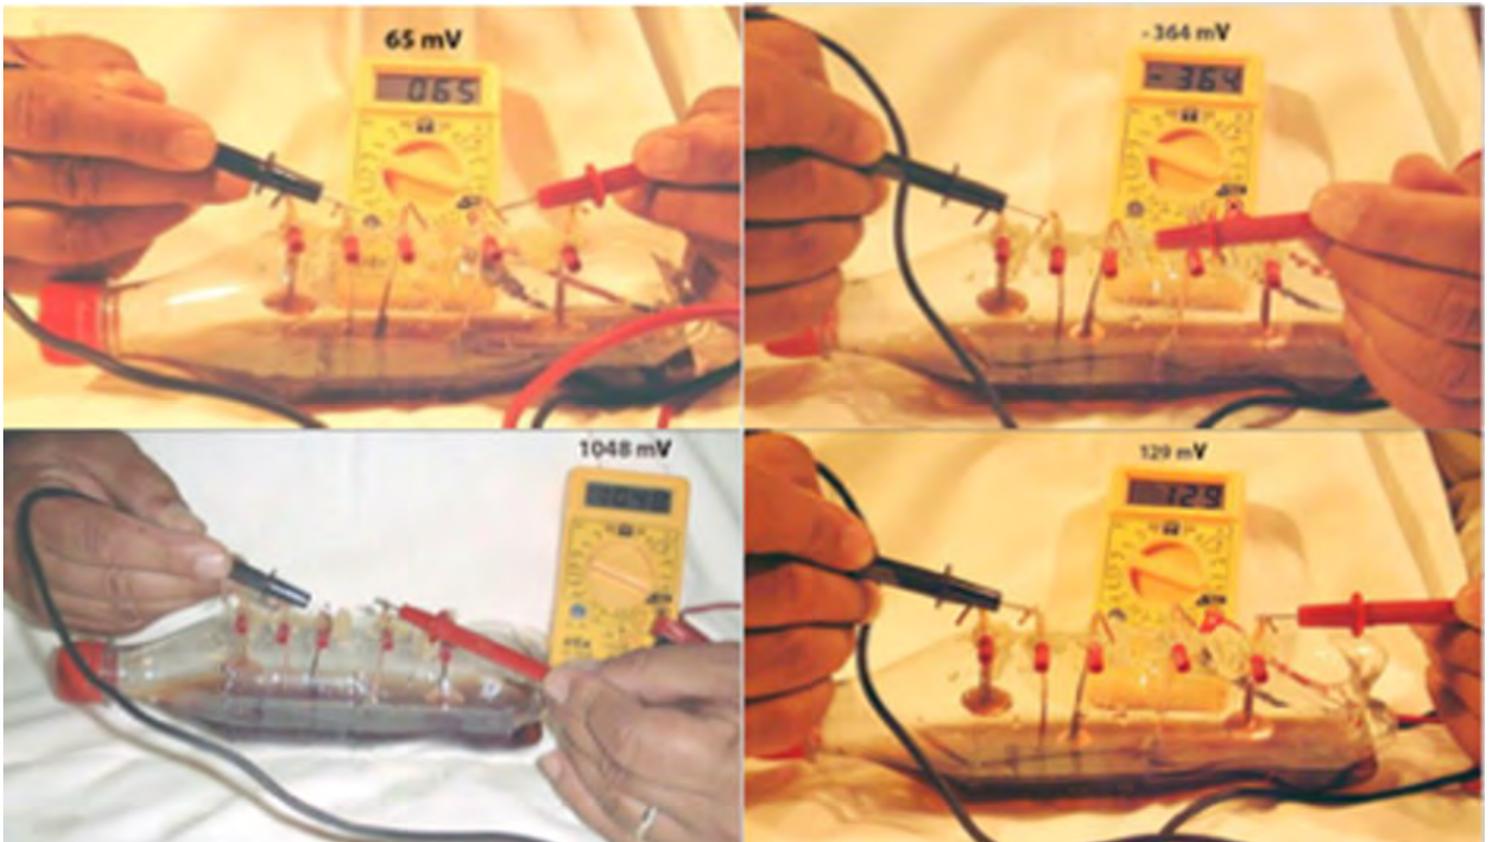

Figure 2. Creating voltage in the bottle (65mV, -364mV, 1048mV and 129mV).

interesting results. The voltage between pairs of electrodes is not static - as demonstrated in Fig. 2.

Other outcomes have been found with different combinations of the electrodes. Similar voltages and current are also reached with both electrodes only in the plasma area (upper part), thus not submerged in the liquid or after emptying the bottle, when there is no liquid in the water. This cola bottle reactor seems to be "empty", but it is filled with plasma. During this state - starting with blank copper electrodes - atomic carbon (sp² and sp³) is deposited on the electrodes, as they become black - as in Fig. 3. The carbon is collected from the plastics of the bottle. Sp² carbon (called 'graphene') is a ballistic (super-super) conductive material that can be used in micro- and Nano-electronics. Sp³'s are diamond-like structures. This all happens in a simple cola bottle, and not in complex systems with lasers and high pressure or vacuum!

Earth, Planets and Stars

The Earth, like all planets and stars possesses a centrally heated core. The creation and maintenance of this heat and the motion produced, are not of the levels of stars, and are not reached by methods which man has chosen for its technological progress up to this moment in time. The creation of these properties is the result of a relative balance between the matters involved within the structure of the planet.

Also, in this simple 'cola bottle' plasma reactor we create a closed environment with its own

proper general internal balance, but with locally - in the liquid - a number of unbalances. It is important however, to keep in mind that all these large spatial objects are made by combinations of fundamental elements on atomic and molecular level, and that between these elements various processes of building and decay happen continuously. In plasma systems, the order of production and maintenance of energy, motion and every other aspect of sustaining a full self-sufficiency is arranged to be as they are in the universal order.

Through this simple system one can achieve the wonderful properties and effects that one sees in everyday life in the universe and on earth. The development of this new tech-

of their energy. In the center of planets, the temperature acquired is in the range of thousands of degrees rather than millions as in stars.

But regardless, magnetism and gravity can be achieved at all temperatures. It is a longstanding intellectual misconception in science to state that high temperature and high pressure are needed to reach basic interactions between the elements of the periodic table. In our prototype reactors based on this new understanding, we create today, even in static reactor prototypes, basic processes (like the production of atomic hydrogen) at room temperature and at atmospheric conditions.

We have proven that the strength of the magnetic field

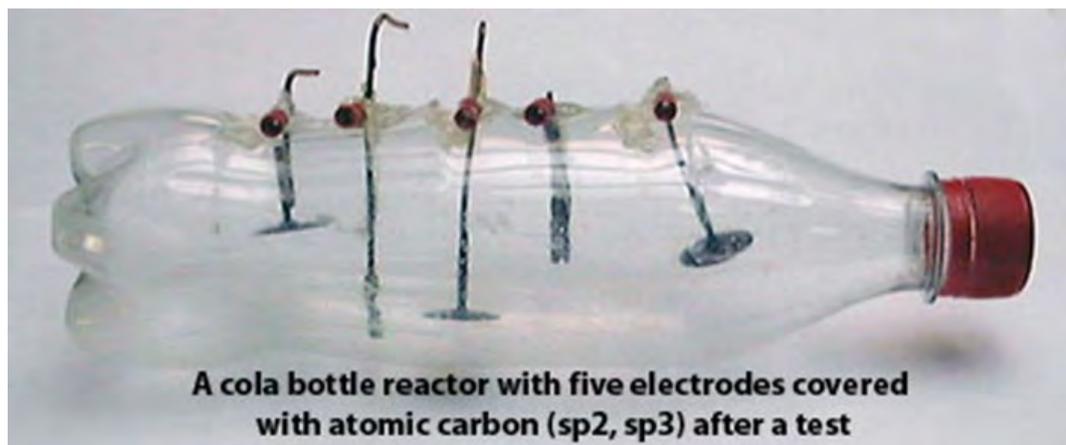

Figure 3. The 'cola bottle' reactor after the test, with five electrodes covered with atomic carbon (sp², sp³).

nology has become possible through a new understanding of the creation of gravity and ability to replicate it in a simple system.

A planet possesses and maintains heat, gravity and magnetic forces through one integrated system, and most planets in solar systems have one common element as the source

and gravity of planets is more dependent on the composition of the material (s) and the speed of motion in the center core of the planet, rather than being dependent on the size, or heat or any other factors in the structure of the planet or star [1]. To have a comprehensive gravitational system, universal laws of physics have to be followed to the letter in the

design of any workable system or reactor, if there is to be the creation of heat, magnetic force fields and gravity.

Indeed:

- » Planets do not have wings, but! they fly already for millions of years in their systems.
- » Planets do not have engine rooms or jet engines fixed to them, but they create energy and are in motions in several dimensions at the same time.
- » Planets do not have exhaust pipes, but! they burn fuel and create heat, some internally and some externally like stars.
- » Planets do not have defense rooms, but! they protect their inhabitants with a magnetic shield called atmosphere.
- » Planets do not have valves and gates in their cores, but! they bring the material they need for them to maintain their existence together through natural laws.
- » Planets do not have the need to hold on to their matter and creatures by attaching them or keeping them underground, but! they create gravitational forces, weak enough for them to be free, at the same time strong enough that they can hold on to them.
- » Planets and stars, using the natural laws of physics and materials, do all of these, all at once and together, without separate machinery and control rooms and fuels. They do this as one fully

integrated system.

Thus, for the first time in the world of technology and intellect, in and by the design and testing of this new system, fundamental principles are set out to show how all these above effects

Figure 4 :The 'cola bottle' reactor with 3 electrodes shows the connection between electrode 2 and 3.

could be very simply attained, all at the same time, and in a natural universal manner in one system.

Discussion

The creation of electrical energy in the plastic bottle reactor is achieved through the process of hydrogen ionization. The electrodes placed in the bottle, from the physical point of view, are independent of each other as they are not touching. This setup forms an open circuit inside the bottle - like an ON/OFF switch, the circuit is OFF when it is open, and it is ON when it is closed; ON = electricity flow, OFF = no flow.

Through the lenses of the

current physics and electro-dynamics, it is not possible to close such a circuit and generate electricity just from the air within the empty plastic bottle. However, through the use of the multimeter, this experiment clearly verifies that there is a

potential difference in charge between two electrodes that are part of a closed circuit (measured in mV). This simple plastic bottle redefines the laws of physics and our perception of matter and confirms the plasma field flow between the electrodes in this particular environment.

With our new understanding of the creation of gravity, we have New Physics in the world of science. This experiment breaks the old laws of physics and brings to light a new, exciting discovery. In the closed 'cola bottle' reactor, we create a kind of micro galaxy in which the PME's (Plasmatic Magnetic Energy) interact and change the properties of the SEPMAF's (Specific Entangled Plasmatic Magnetic Fields), where some of

these interactions are what we call traditionally: gravitational effects.

Therefore, we have serious indications that one of sciences longest outstanding mysteries, the origin of gravity, has finally been resolved. The energy that spins our Milky Way Galaxy, our Solar System and Home Earth is

Figure 5: The 'cola bottle' reactor with 3 electrodes shows the connection between electrode 1 and 2.

the same energy that spins the electrons within this bottle. This is the universal energy one taps into via this experiment, because there is literally a microscopic galaxy of atoms in this bottle spinning around copper wire (closing the circuit and generating electricity. Imagine if we shrunk an entire galaxy and put it into a coffee cup. Then we stuck some electrodes into that swirling galaxy - we would probably read energy. **That is pretty much what we are doing here, but with atoms not stars.**

How do we know the bottle is not simply a battery? Because there is not an abundance of electrons in the bottle, like the abundance of electrons within a battery. Rather this is generating energy

by moving electrons in a way that mimics our entire galaxy. In this 'cola bottle' reactor, we achieve several outputs of voltage and current, we create atomic hydrogen and we process simultaneously deposits of atomic carbon on electrodes. The processing is not based on chemical interaction, like with

caused in the first stage the creation of fundamental particles, secondly atoms, then molecules and then matter, clouds and asteroids and then stars and galaxies.

The interaction and accumulation of the plasmatic magnetic energies usually leads to creation of energy, heat and/or of motion of their given atomic structure in the inner sanctum of each atom (and molecule), which finally leads to creation of all sorts of matters in the cosmos. This means that such fundamental processing happens in a smooth way on the fundamental magnetic level, and not by brute forces, like in reactors, which need high temperature and high-pressure conditions.

acids. The working of such static reactor is completely different from the working of batteries. Current is for example also collected from electrodes, which are not submerged in the liquid, thus is collected from pure plasma. Next it is noted that the reactor recharges itself automatically while other terminals generate voltage.

The Universe was made in normal condition of cosmos, which was originally nothing but packages of plasmatic magnetic fields of different strength, where these packages were themselves nothing but areas of plasma or collections of loose magnetic fields energies. Where magnetic fields of different strength in-locking to each other, by principle of their plasmatic magnetic energy (PME), have

By reproducing such plasmatic magnetic energy conditions in simple plasma reactors during repeated experiments and tests, working at room temperature and at atmospheric pressure, we have full evidence that this type of processing is very feasible and reliable, and that we achieve to perform the generation of energy and matter in a completely new way, which is unknown in today science. You can see how we create voltage and current in a simple cola bottle reactor - equipped with electrodes - with inside a plasma of our special Kt Liquid, creating energy and additionally we create at the same time deposits of graphene (sp²) and diamond (sp³) on the electrodes! This shows that we separate the content on atomic level.

In the universal order, binding energy of a nucleus of matter is lost through plasmatic magnetic energy losses. That is to say, in a solid magnet, the magnetic energy of the matter is permanent according to realignment of electrons within the materials of the magnet and cannot be altered by its use, but in the plasmatic magnetic energy in the nucleus of an atom this is not so. There the magnetic energy in plasmatic state can be transferred from one level of an atom to another level, or commonly from one atom to another, independent of temperature and pressure.

That is why we can create in just a simple 'cola bottle' reactor at atomic level carbon deposits, like graphene (sp² carbon) and generate at the same moment electricity - the same principle can be utilized for separation of carbon from the exhaust gasses of cars and industry.

Applications in industry

One of the outcomes of the presented experiment, is proving that the carbon from the gasses inside the liquid can be collected and deposited on the electrodes. This is to demonstrate that the same principle can be utilized for separation of carbon from the exhaust gasses of cars and industry. **The acids contained in the soda drink are not essential to create current.**

The basic approach shown in the cola bottle can be easily applied for large industrial production. For example, one can design specific reactors to produce only sp³, thus to manufacture industrial diamond, transparent

diamond and glassy carbon for various industrial applications. The presence of pure transparent diamond crystals on special electrodes was confirmed by the diamond experts in Antwerp.

On the other hand, it is possible to produce in an easy way boron nitride, like in mono-layers (a-BN). One can also treat various materials, which are covered by insulation, such as telephone wires.

Already mid 2006 during tests other properties have been observed, such as porous C-structures which can be used for environmental cleaning. This is part of our IP. In April 2007, some organization claimed the same discovery.

A similar system can be used for the cleaning up of CO₂, NO_x and SO₂ from automotive, home and industrial exhaust gasses. Adapted versions of this reactor can be used in water treatment systems and extract elements like Cadmium and Chromium. Also, Trichloroethylene can be extracted from contaminated water in a simple way by using electro-magnetic fields of the plasma.

Investigation of the effect of:

CH₃, CO₂, K & Mg GANsEs and amino acids on

cucumber

and tomato

crops

Author: Ralii Babanu, Republic of Moldova, Transnistria, Tiraspol

February 2019

Subject

This study aims to document the effect of the various GaNSes on the growth of tomato and cucumber plants in a garden of a private house in Moldova. In our country, the climate is not always favorable and so is the quality of the soil. But Republic of Moldova is a country where there are many rural residents who grow most of the necessary vegetables and fruits in their garden plots.

I decided to explore the effectiveness of plasma agriculture in a local climate, with crops that are mainly grown here.

I hoped that the positive results of the experiment would set a good precedent for my country. There are two small plots around my house, with very bad soil.

Attempts to grow something never gave the result. There was a lot of work, no result, it was too hot, too dark and too dry. Therefore, I decided that if a crop was obtained at these plots with the help of plasma science, then it would be proven that it is possible to receive a crop in all other garden plots of the country, where conditions are usually much better than mine.

Method

Seedlings: The 20cm tall seedlings of tomato and cucumber were purchased on local market

Date of Planting: 12th of April 2018.

Land Plots: 2 small parcels.

Planting: intermittent, uneven distribution.

Watering: regularly, once in 2-4 days, depending on soil humidity.

Note: All previous attempts to grow plants on these land lots failed, plants were perishing, not even reaching maturity. Attempts were made in different years.

LandPlot	First	Second
Area	0.4m x 6m	2.5m x 3m
Physical environment	One side covered by high fence, at least 1.8m tall	Two sides covered by high fence at least 1.8m tall, other two sides are covered by walls (house).
Tomatoes	Tall varieties (Prezident, Tolstoj, Bayan, VP-F1)	Short varieties (Nastena)
Cucumbers	None	“KONKURENT”, at 17-19 th of April added seeds of Konkurent, Rodnichok, Phoenix-640.
Lighting Conditions	Rich light in the first half of the day, slightly less in the second half. Shadow after 17:00	Direct sunlight only between 10:00 and 15:00. Shadow for the rest of time.

GaNS preparation

The CO₂ + Mg + K GaNS was manufactured in our own private home laboratory, according to the Keshe plasma technology, like creating GaNS for nutrition. The medicament “ASPARKAM” from pharmacy (Potassium aspartate & magnesium aspartate) in form of pills was grinded to powder and kept at least 7 days in the CO₂ GaNS for field transition of K and Mg into the obtained GANS mix. Then we added GaNS amino acid COHN, extracted from the CO₂ plasmatic reactor. The resulting GaNS was then put into a 3-liter plastic container (bottle) and filled and mixed with distilled water - to produce sufficient amount of the liquid plasma of it. Finally, 5ml of the CH₃ GaNS was added to the obtained GaNS mix.

Usage

- In the first week - 10-15% solution of CO₂ liquid plasma, sprayed on the plants' surface.
- During the following period - 10-15% solution of CH₃+CO₂+Mg+K+COHN, sprayed on the plants' surface.

- Vessels with liquid plasma were placed on land plots with interval from 1.5 to 3m, to create a constant plasma field in plants area.
- Treatment period: 2-4 days, spraying was done at the time of watering or after watering the soil, during the first two months after planting.
- For the rest of time, after first two months, plasma treatment was mainly done by fields emitted by the vessels. Spraying was done at most 1-2 times a month.

Observations

After 4 weeks from the planting day, on 10th of May 2018, all of the tomatoes survived the

Figure 1. Tomatoes and cucumbers' growth, on 10 May 2018

planting in open soil and reached the height up to 40cm, are blooming and fruiting enormously, fruits reaching up to 3cm diameter. Cucumber seedlings of "KONKURENT" species reached the height of around 50cm, bloomed enormously and fruited, the size of small cucumbers being 1.5-2cm. All plants look very well, trunks and leaves are physically vigorous having intense green color - as in Fig. 1.

The seeds planted on 17th-19th of April germinated and kept growing: cucumbers of species "Konkurent", "Rodniciok" and "Phoenix-640". These seeds were treated with CO₂ liquid plasma for 24 hours before

Figure 3. Leaves appearance and size, on 27 May 2018.

planting.

As in Fig.2, after 1.5 months after planting, on May 25th 2018, tall species tomatoes have reached height of 90-110cm, cucumbers 90- 100cm, with extensive Phyto mass, healthy stems and leaves, with enormous amount of blooms and fruits. Leaves look healthy, have intensive green color and their dimension is normal to large. Fruits reach sizes up to 5cm in amount of 5-7 tomatoes for one inflorescence.

Figure 2. Tall species tomatoes, on 25 May 2018.

Figure 4. General appearance, on 27 May 2018.

Figure 5. Measuring height of crops, on 13 June 2018.

Results

First cucumbers of good condition were collected at 29th of May. Regular harvest of cucumbers started from June 10th - 15th. They had normal appearance, pronounced taste - as in Fig. 6.

Ripening of tomatoes began in the middle of June, first ripe tomatoes appeared on 3rd week of the month. During July- September, ripe tomatoes were harvested regularly, in amount of 1-2 kg, every 2-3 days. They had normal appearance and pronounced sweetish taste - crops' measurements in Fig. 7.

During the entire period of vegetation, tomatoes continued to grow, bloom and fruit. Plant height reached 2.5 - 3 meters with continuously growing Phyto mass. Cucumbers as well evolved normally, taking all the available space. They had a very nice crop compared to what was expected for a such dark place.

Figure 6. First crop - cucumbers, on 29 May 2018.

Figure 7. Tomatoes' first harvest growing, on 13 June 2018.

Active

vegetation period was long enough, which is usual for tall species tomatoes. They have continued to grow even in October, and their upper crown became so massive, that they broke supporting frames. They have continued to produce ripe tomatoes, kept blooming, had a lot of green fruits. Ripening speed has degraded for the reason of daily temperatures lowering. Cucumbers continued fruiting actively until October, despite having a lot of dry leaves already - as in Fig. 9.

Figure 8. Vegetation dynamics - tomatoes and cucumbers, on 18 August 2018.

Figure 9. Active vegetation period, October 2018.

Pests control

From pathogenic pests, only the activity of pseudo peronosporosis "Pseudoperonospora cubensis Rostowz" was observed.

Pests control was made by spraying liquid CuO_2 plasma several times. Also, its spread and growth was stopped by removing affected leaves.

Despite the fact of having pests, both tomatoes and cucumbers provided good gather. Pests were not active.

Summary and results

As a result of this agrarian experiment on mentioned land plots was established that:

1. Desired action of plasmatic field is evident and pronounced.
2. In the presence of the plasmatic field of carbon (C), magnesium (Mg), and potassium (K), the plants look and behave like they are fertilized by mineral enrichment.
3. Plasmatic field is available for the plants and has a good effect, despite the fact it was created using different methods.
4. Active vegetation period of cultures has prolonged and became more effective for the reason of plants being under the influence of the plasmatic fields.

Visual confirmation of a

natural dynamic field flow in GaNSes

**Author: Joel Ricard
February 2019**

Subject

The making of a GaNS is a privilege accessible to all, thanks to the generosity of Mr. Keshe and his Foundation. During my first internship, I was immediately convinced by this technology, which is now part of my daily life.

The questions on MaGrav, disc technology, GaNS, fields, with their association to the Soul are a chance to go very far to re-humanize our Planet. My background in the world of scientific research, with the desire to advance this technology in all modesty, prompts me to propose these few lines about the interaction of the best-known and most accessible fields of GaNS.

The interaction of the fields is a concrete, known and validated fact. I have investigated myself in trying to understand in more details, the

interactions that exist between two GaNSes, when they are installed in two spheres close to each other; each being dedicated to one GaNS. Of course, in this situation, the fields interact. We can ask ourselves whether there is a "natural dynamic flow" between two objects (as in Fig. 1), capable of concretely generating a displacement comparable to those of two magnets that attract or repel each other - this is the purpose of the experiments I propose to you in this article.

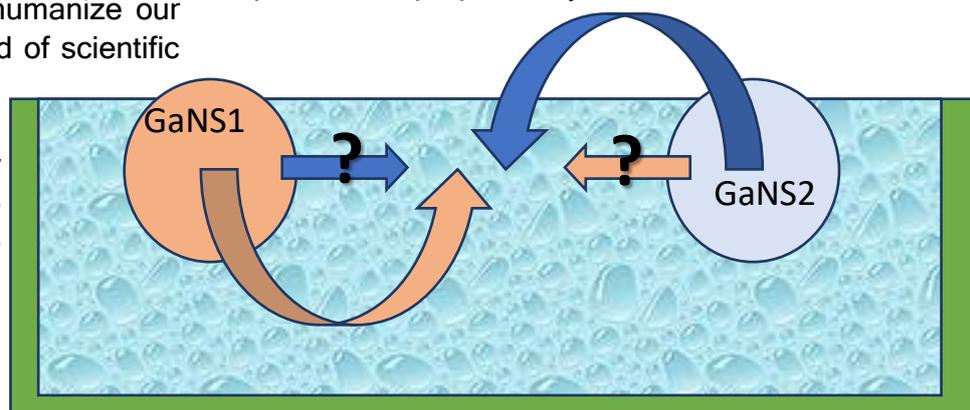

Figure 1. Is there a dynamic flow between two GaNSes?

TEST METHOD

Preparation of the tests

It is a question of making the simplest possible tests, with the following equipment:

- » A large rectangular glass tray with a flat bottom filled with water,
- » A series of plastic spheres with a diameter of 30 mm: each of them is filled with a GaNS (90% of the available volume),
- » A grid on paper (grid every 10 mm) to follow the evolution of the spheres in the water,
- » A stopwatch used to trigger the photos (every 30 seconds) and to evaluate the velocity of the sphere's movement,
- » A table with an antistatic coating,
- » A digital SLR camera on a stand (Fig. 2).

Figure 2. Digital SLR camera on a stand above the test.

The glass tank was chosen with a flat bottom, with large dimensions in relation to the diameter of the test spheres, in order to eliminate edge effects (attraction of floating objects towards the walls).

The spheres were drilled at the top so that the GaNS could be injected with a syringe. The small diameter hole was filled with glue. The spheres are all similar, handled with gloves, filled with the

same amount of GaNS (so that they have an identical wet surface) a few minutes before the test. They are electrostatically discharged before the test on the antistatic coating of the table.

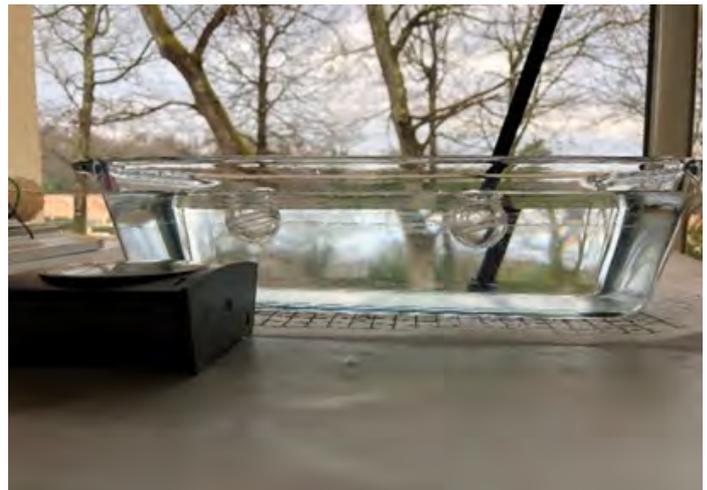

Figure 3. Views of the glass tank with a couple of spheres

The GaNSes used are desalinated. The sample in the jar is taken with a syringe after stirring the plasma water and the solid GaNS, so that solid GaNS particles are embedded in the spheres.

Testing strategy

CO₂, CH₃, ZnO, CuO and H₂ GaNSes are used for the experiments. First, we test two GaNS balls at a time. The movements of the spheres are analyzed with two parameters: trajectory and time.

Photos taken every 30 seconds make it possible to visualize the movements and the time when the trajectories deviate to bring the two spheres in contact. Each pair of GaNSes tested is listed and classified according to the speed at which contact between the spheres is established.

In a second step, at the end of these tests, a classification is established to extract the most efficient in terms of attraction, and to try to define which combinations generate a "natural dynamic flow" between two objects.

In addition, two spheres filled up to 90% capacity with osmosis water are positioned in the tank, in order to validate the fact that it is the fields that puts the spheres into motion. This control group is to prove that as these balls do not carry strong fields, they should not move. A photo sequence documenting the experiment is proposed later in this article.

Distinctive criteria of each GaNS, electro negativity notion

All GaNSes have components known in classical science. They are listed in the periodic table of elements. This table is regularly updated as the specific characteristics of each element are refined.

Until now, atomic mass has been the only criterion used to describe the development of the GaNS. For the tests described in this article, and given that they are in plasma condition, I propose to add electro-negativity, in order to have a more precise classification parameter, always in the context of the search for the "natural dynamic flow" between two objects.

As a reminder, the electro negativity criterion is the characteristic quantifying an atom in its ability to attract electrons during a chemical bonding.

Table 1 Lists of the atomic mass of the five GaNSes that are relevant to this experiment.

element	symbol	Atomic mass	GaNS	Total mass
carbon	C	12,0106	CO2	Gravitational 44
oxygen	O	15,994	CuO	Magnetic 79,54
copper	Cu	63,546	ZnO	Gravitational 81,37
zinc	Zn	65,38	CH3	Magnetic 15,03
Hydrogen	H	1,008	H2	Magnetic 2,016

The two attributes, atomic mass and electro-negative level, are captured for each element in the periodic table, as in Fig. 4.

If we relatively compare one in relation to another, we see that the H₂ GaNS and the CH₃ GaNS are the "lightest" of the five; the ZnO being the "heaviest".

Table 2 lists the parameter of electronegativity, which for GaNS is added up, the same way as the atomic masses of the elements of each GaNS are added in Table 1.

Table 2 Lists of the global electronegativity levels of the five GaNSes that are relevant to this experiment.

GaNS	Global electronegativity
CO2	Gravitational 9,3
CuO	Magnetic 5,3
ZnO	Gravitational 5
CH3	Magnetic 9,1
H2	Magnetic 4,4

We will therefore work for each test with two GaNSes, regardless of their gravitational or magnetic origin, trying to simply associate those with a large difference in their atomic mass, and/or a large difference in their electronegativity levels.

Experimental Procedure

Each pair of GaNS was tested several times to validate the results.

In order to simplify the article and not to impose all the views of all the tests (available on request), I propose you some views of a test focusing on the pair of CH₃ and ZnO.

The contact between the spheres in the tank in Fig. 5, took place after 18 minutes.

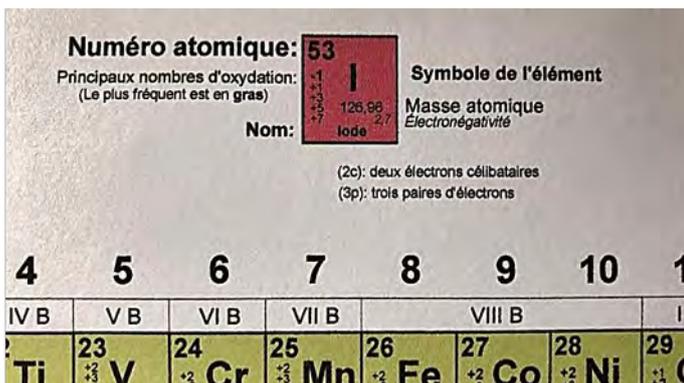

Figure 4. Localization of the electronegativity value in the periodic table of elements

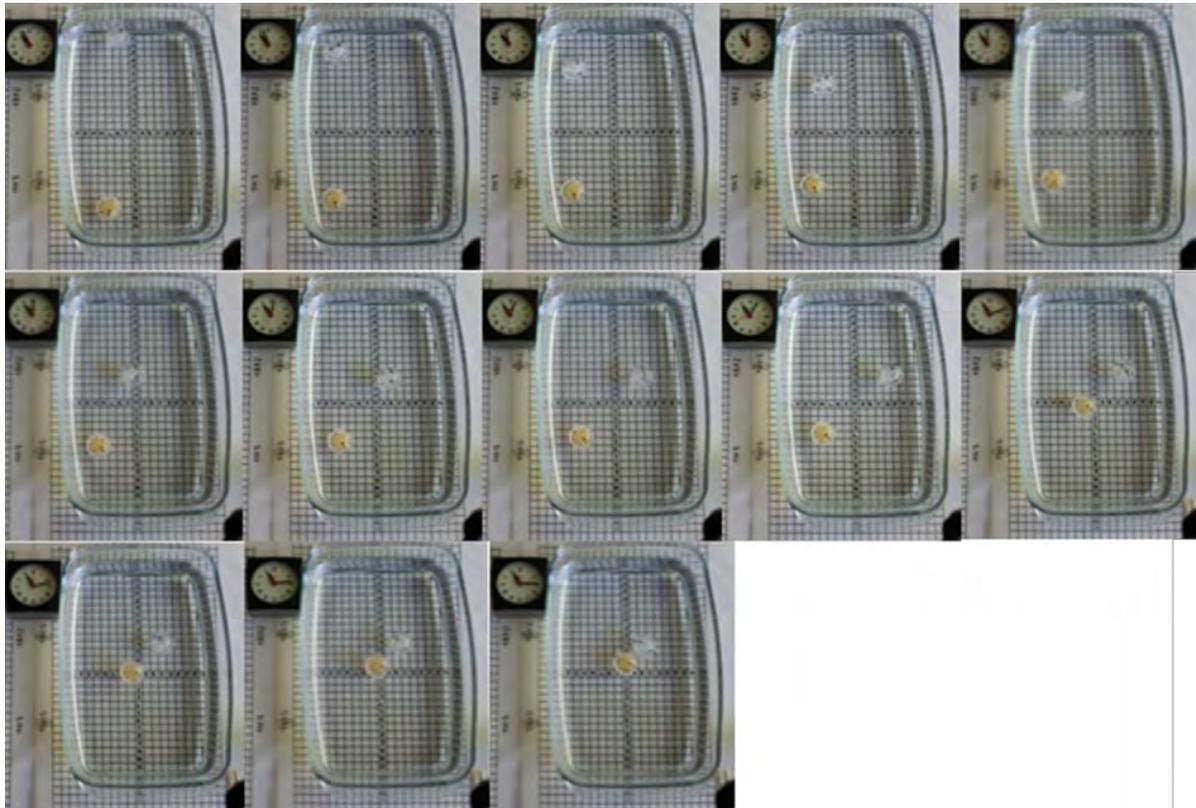

Figure 5. Principals views of the test on the pair CH3 and ZnO

The tests were carried out by first selecting GaNS pairs that have large differences in value between their respective atomic masses and large differences in value of their electronegativity levels. Indeed, it is these couples that are "predisposed" to materialize the "natural dynamic flow" between the two spheres.

CASE STUDY 1 - RESULTS AND ANALYSIS Test Results

Table 3 summarizes the results obtained.

Analysis of the test results

Before discussing the comments on all these

Table 3. Summary of the results

Couple of GaNSes studied	Criteria: Gap (difference) between one GaNS and the other in respect to...		Contact between spheres established in
	... their atomic masses	... their electronegativity levels	
CH3(m) / ZnO(g)	66,34	4,1	18 minutes
CH3(m) / CuO(m)	64,51	3,8	21 minutes
CuO(m) / CO2(g)	35,54	4	21 minutes
CO2(g) / ZnO (g)	37,37	4,3	39 minutes
H2(m) / ZnO (g)	79,354	0,6	79 minutes
H2(m) / CO2 (g)	41,984	4,9	97 minutes
CuO(m) / H2(m)	77,524	0,9	22 minutes
CH3(m) / H2(m)	13,014	4,7	28 minutes
CH3(m) / CO2(g)	28,97	0,2	67 minutes
CuO(m) / ZnO(g)	1,83	0,3	>122 minutes

tests, I come back to the behavior of the two spheres filled with osmosed water and positioned in the tank, in the same way as the GaNS spheres. The test took place over more than 13 hours, and as shown in Fig. 6, spheres in the control group remained immobile, and therefore support the conclusion that due to the presence of GaNS one can observe the field flow between the two spheres, as it manifests in the sphere's physical motion.

- » All magnetic/magnetic couples work, they allow the spheres to touch, in less than 30 minutes. It should be noted that their parameters have significant differences in values.

On the other hand, the results show that if we had to work solely with the criterion of the difference between atomic masses, it would not have been possible to discern which couples are

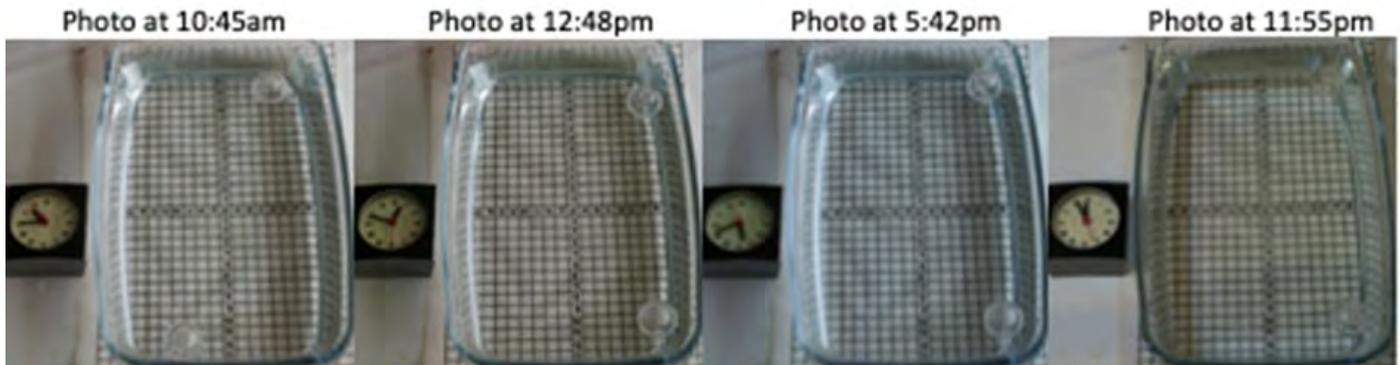

Figure 6. Principals views of the test on the two spheres filled with osmosed water

From Table 3 we learn that:

- » Two magnetic / gravitational pairs (CH_3 / ZnO and CuO / CO_2) are the most efficient in bringing the spheres into contact with each other (20 minutes maximum). Each GaNS of these pairs has a large difference in atomic mass and electronegativity level in respect to each other:

CH_3 / ZnO : atomic masses difference = 66,34 ;
electronegativity difference = 4,1

CuO / CO_2 : atomic masses difference = 35,54 ;
electronegativity difference = 4

- » The other "mixed couples" magnetic/gravitational are not so effective in bringing the spheres into contact with each other - their two criteria have small deviations (the smallest being the couple CuO / ZnO with atomic masses difference = 1,83 ; electronegativity difference = 0,3; or one of the two weakest, such as case of the couple $\text{CH}_3 / \text{CO}_2$ for example, atomic masses difference = 28,97 ; electronegativity difference = 0,2).
- » Gravitational/gravitational couples do not work.

suitable for the function and which ones are not. Indeed, to reveal the existence of a "natural dynamic flow", the criterion of electronegativity is essential, as the presented results support this conclusion.

To conclude on this first part, we only consider the GaNS couples that allow the spheres to come into contact in less than 30 minutes. These couples are: CH_3 / H_2 , CuO / H_2 , CH_3 / CuO , CuO / CO_2 and ZnO / CH_3 .

The ZnO / CO_2 couple (in blue in the table) will also be studied, as it is the only gravitational/gravitational couple that is below 40 minutes for the spheres to come in contact.

Precise analysis of the trajectories, speeds and performances of the selected GaNSes

In this second part of the study, the aim is to analyze the trajectories of the spheres in the last centimeters of the race, to evaluate their respective speeds, and to answer the following questions:

- » Is there a propelling GaNS?
- » If so, what is it?

- » What is its relative speed?
- » Which sphere will take precedence over the other?

The answers will allow us to create a diagram of how these GaNSes interact, with privileged directions of attraction.

To do this, distances are measured using the grid, and times are captured by dating the photos. These data can therefore be easily integrated, and speeds calculated. For each test, the atomic mass and electronegativity values are recalled for each GaNS pair.

CH₃ 15,03; 9.1 / H₂ 2,016; 4.4

The sphere with CH₃ bends its trajectory at time D (T₀ - 1'30"). The remaining distance to contact

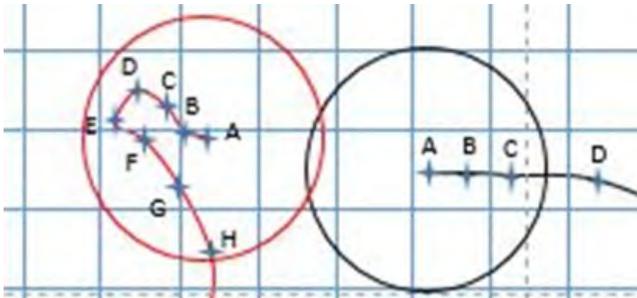

Figure 7. CH₃/H₂: detailed trajectories in the last centimetres of the race.

is 11.3 (CH₃) + 24.3 (H₂) = 35.6 mm (at that time, in a straight line, the centers are 58.8 mm apart). The distance is covered in 1'30" - detailed trajectories of this experiment in Fig. 7.

Average speed CH₃: 45.2 cm/h (distance covered: 11.3 mm)

Average speed H₂: 97.2 cm/h (distance covered: 24.3 mm)

The H₂ has a speed more than twice the value of the CH₃. **THE H₂ TRAVELS TOWARDS CH₃.**

CuO 79,54; 5.3 / H₂ 2,016; 4.4

The sphere with H₂ bends its trajectory at time C (T₀ - 1'). The remaining distance to contact is 8.8 (CuO) + 6.7 (H₂) = 15.5 mm (at that time, in a straight line, the centers are 40.6 mm apart). It gets covered in 1' - detailed trajectories of this experiment in Fig. 8.

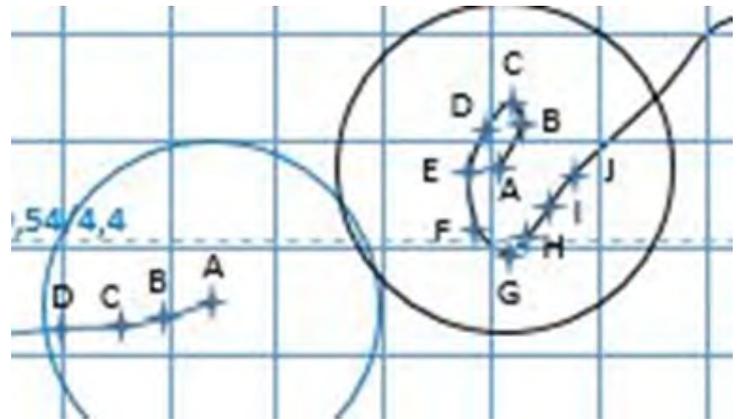

Figure 8. CuO/H₂: detailed trajectories in the last centimetres of the race.

Average speed H₂: 40.2 cm/h (distance covered: 6.7 mm). Average speed CuO: 52.8 cm/h (distance covered: 8.8 mm). CuO is faster than H₂. **CuO TRAVELS TOWARDS H₂.**

CH₃ 15,03; 9.1 / CuO 79,54; 5.3

The CuO sphere slightly deflects its trajectory at time D (T₀ - 1'30"). The remaining distance to contact is 15.4 (CH₃) + 10.55 (CuO) = 25.95 mm (at that time, in a straight line, the centers are 53.5 mm apart). The distance is covered in 1'30" - detailed trajectories of this experiment in Fig. 9..

Average speed CH₃: 61.6 cm/h (distance

Figure 9. CH₃/CuO: detailed trajectories in the last centimetres of the race.

covered: 15.4 mm)

Average speed CuO: 42.2 cm/h (distance covered: 10.55 mm);

THE CH₃ TRAVELS TOWARDS CuO.

ZnO 81,37; 5 / CO₂ 44; 9.3

The two spheres deflect their trajectories at time C (T₀ - 1'). The remaining distance to contact is 14 (ZnO) + 10.5 (CO₂) = 24.5 mm (at that time, in a straight line, the centers are 42.7 mm apart). The distance is covered in 1' - detailed trajectories of this experiment in Fig. 10.

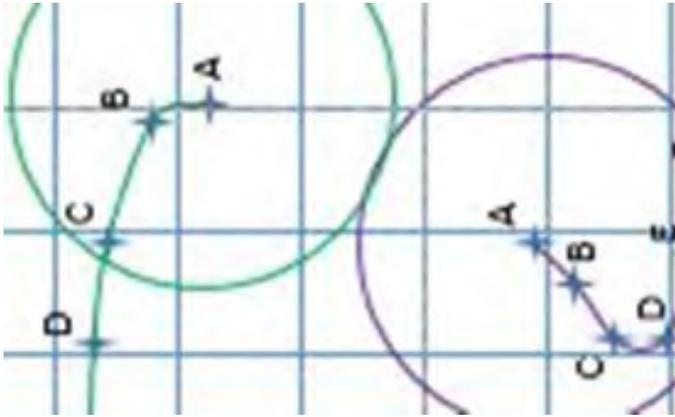

Figure 10. ZnO/CO₂: detailed trajectories in the last centimetres of the race.

Average speed ZnO: 84 cm/h (distance covered: 14 mm)

Average speed CO₂: 63 cm/h (distance covered: 10.5 mm)

ZnO TRAVELS TOWARDS CO₂.

CuO 79,54; 5,3 / CO₂ 44; 9.3

The two spheres deflect their trajectories at time C (T₀ - 1'). The remaining distance to contact is 8.6 (CuO) + 10.2 (CO₂) = 18.8 mm (at that time, in a straight line, the centers are 41.8 mm apart). The distance gets covered in 1' - detailed trajectories of this experiment in Fig. 11.

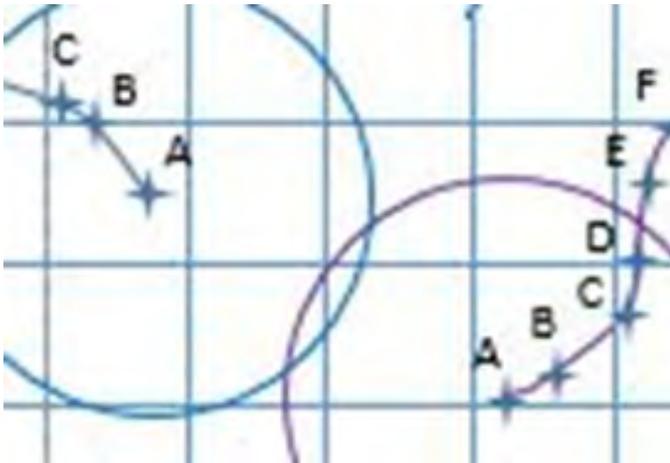

Figure 11. CuO/CO₂: detail of the trajectories in the last centimeters of the race

Average speed CuO: 51.6 cm/h (distance covered: 8.6 mm)

Average CO₂ speed: 61.2 cm/h (distance covered: 10.2 mm)

CO₂ GOES TOWARDS CuO.

ZnO 81,37; 5 / CH₃ 15,03; 9.1

The two spheres deflect their trajectories at the time C and D (T₀ - 1' and T₀ - 1'30"). The remaining distance to contact is 11.8 (ZnO) + 11.4

Figure 12. ZnO/CH₃: detailed trajectories in the last centimetres of the race.

(CH₃) = 23.2 mm (at that time, in a straight line, the centers are 50.6 mm apart). The distance is covered in 1' for the ZnO and 1'30" for the CH₃ - detailed trajectories of this experiment in Fig. 12.

Average speed ZnO: 70.8 cm/h (distance covered: 11.8 mm)

Average speed CH₃: 45.6 cm/h (distance covered: 11.4 mm)

ZnO GOES TOWARDS CH₃.

Figure 15. View of the three spheres at the end of the final test.

Analysis of the test results

In summary, the attraction connections between the GaNSes is visualized in Fig. 13.

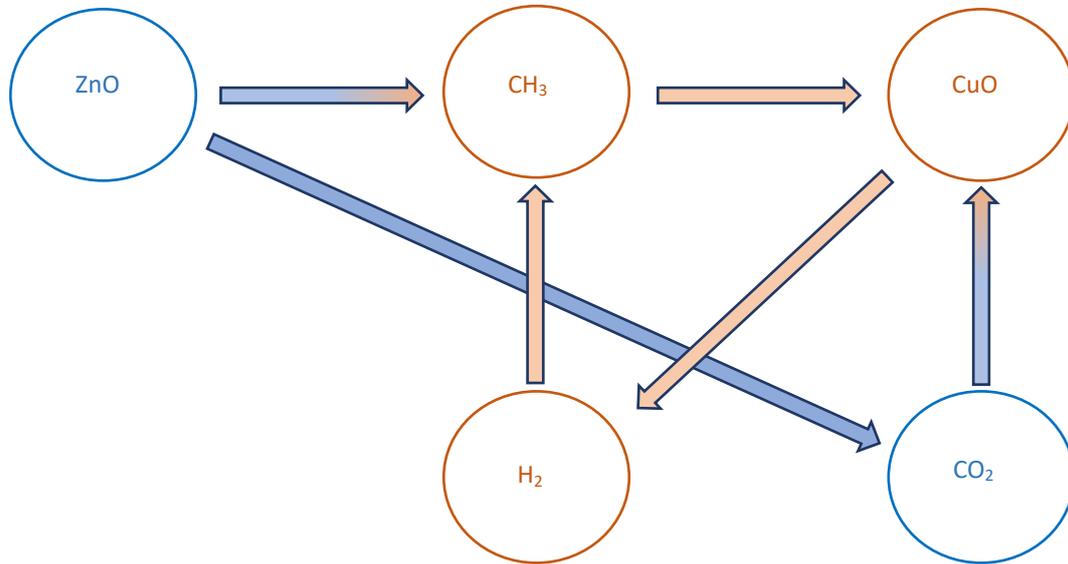

Figure 13. Connection circuit between the GaNSes.

We can see that the effective combination is composed of magnetic GaNSes. This combination of H_2 / CH_3 / CuO allows to create a dynamic field which velocity can be estimated, as in Fig. 14.

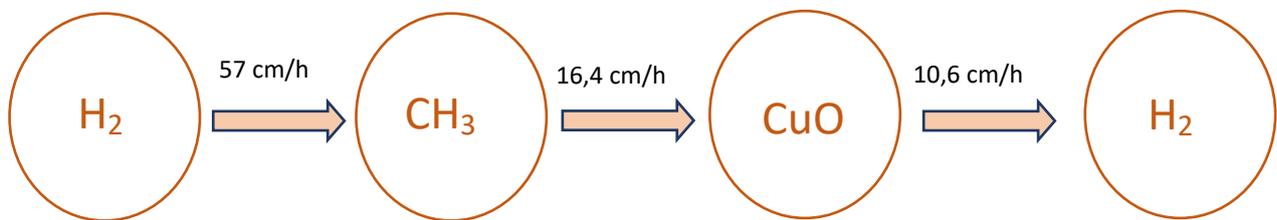

Figure 14. Estimation of the velocity of the spheres filled with the magnetic GaNSes.

Final conclusions

This study shows that:

- » A natural dynamic flow exists between several suitably selected GaNSes,
- » The electronegativity criterion is essential to sort the GaNS as part of the attraction function,
- » Gravitational/gravitational GaNS couples do not attract quickly, they are not efficient in this function,
- » Magnetic/magnetic GaNS couples attract quickly,
- » Mixed GaNS couples operate under certain conditions (if there are large differences in atomic mass and if there are large differences in their electronegativity level).

This study contributes to the understanding of phenomena that are very well explained in the Foundation's courses, through a visual and globally quantifiable approach. Beyond these observations, it seems interesting to me to transpose these results into health device technology, MaGrav technology and disc technology.

I thank Hadile for encouraging me to publish these results.

Processing the seed of the foot-dipping (FD) condition in coma

Author: Giovanni Lapadula
February 2019

Subject

This paper documents the procedure for applying the plasma technology to the condition of foot-dipping (FD) of a 22-years-old, female. The subject of this study spent several weeks in deep coma condition and then immobilised in hospital bed, as a result of a car accident at the age of 21 when she suffered multiple injuries and life-threatening fractures. Fifteen months after the accident, she developed the FD condition, which prevented her from undergoing the physiotherapy and walking.

Method

The cause of the FD is the salt crystallization in the foot, which prevents its normal range of movement and blocks the foot in a flat position. Hence, the first step of dealing with such blockages is to remove the crystalized matter. The method for processing the FD condition is based on the fundamental laws of plasma science, where the **'stronger feeds the weaker'** and the fact that one can create a **'magnet'** for any substance. One

Figure 1. Frontal view of the FD condition.

Figure 2. Side-view of the FD condition.

material which is of the same salt content as the crystallization in the foot, is the urine. Therefore, one does not need to rely on an invasive biopsy to find out what the seed of the problem is but can simply prepare the required GaNS, based on the subject's urine.

To prepare GaNS of urine, one can use the following quantities:

- 50% urine (380 grams),
- 50% CO₂ liquid plasma (380 grams) with a small amount of the CO₂ GaNS (11gr).

Figure 3. Processing FD using the urine GaNS patches.

To introduce the **flow of fields** similar to the cause of the crystallization, ratio of around 2:1 can be created by splitting this GaNS into two patches: patch 1 (smaller, 261 grams), patch 2 (bigger, 511 grams). To avoid fermentation of the material inside the patches, before sealing, try to put all the air out of the patches.

Usage

The procedure for processing FD involved placing two patches around the foot - as in Figure 3. Patch 1 (smaller) was placed under the foot around the heel area, while the second patch (bigger) was placed opposite the first one, on the top of the foot. In this way, the crystallization was directly positioned in between the two patches.

It is important to leave **minimum 5cm** distance between the two patches for the interaction of the fields and to keep patches on for **no less than 48 hours**.

Observations

Start of the application:

20:15 on 13/10/17

First check

[11:00 on 14/10/17]: The physiotherapist verified an evident mobility and a clear reduction of the pain during the physiotherapy of that limb.

Second check

[10:30 on 20/10/17]: The crystallizations were dissolved.

Results

The first results of increased mobility and pain reduction were confirmed within 15 hours of the first application of patches. Within one week, the cause of the FD condition was fully resolved, and the physiotherapy moved to the next phase of restoring the full range of movement.

Acknowledgements

Special thanks to Mr. Keshe for his unconditional knowledge sharing and through it for saving the life of this beautiful soul - my daughter.

PLASMA

by Cristian David Carvajal Martin

January 6th 2016

In most plants I noticed a greater retention of moisture in the substrate. compared with no GANS. The quality of the plant, the two apparently equal. The only disease or pest affecting all plants was one of small flies, which were located in the substrate, apparently did not attack the plant. Probably by the amount of soil moisture.

The other comparison is more flavor, aroma, especially strawberries.

In plant size, maybe a little bigger exposed to the CO₂.

On the other hand, some of the pots have 3 rings with GANS, one in the " water tank " at the bottom. Another ring on the potting soil, and another half of them buried in the ground. The intention was to create a favorable environment within these rings.

Other pots (the largest tomato) have GANS rings placed in different position.

In the image of the elongated container with two interlocking rings placed on the earth, a curious thing happened, I do not know whether or GANS due to lack of light. They gave me a purple basil, planted there and put the GANS. The next day was no longer purple.

I finished the harvest may have more a photo. Now I'm doing other experiments, gradually will upload everything I've done so far is enough.
