AUSTRIA RESEARCH CENTER:

PLASMA MIRRORS

& PLASMA INTERFERENCE

by Keshe Foundation

259th Knowledge Seekers Workshop
<https://youtu.be/aQFNLeLQxgY?t=8455>

Keshe Foundation Research Centers are constantly working on the innovations in Keshe Plasma Science and Technology.

Recently we have learned about a product that the Austrian Research Center has developed called "Plasma Mirrors". This product can be found on the Keshe Foundation Store if you are interested in purchasing your own and support the continuous research.

But what are the Plasma Mirrors and what do they actually do? On 17th of January 2019, during the 259th Knowledge Seekers Workshop it was presented, together with its effects in a surprising live experiment.

When trying to connect to the live teaching, the team in Austria experience a lot of interferences, to find out for our surprise that it was a motorless reactor that has

been running in the background creating this interference. When the device is switched on, it changes the conditions, when it is switched off the conversations run normally. This interference from the motorless reactor was called by Mehran Keshe the "plasmatic interreference" explaining further that this is the principle of the technology with which the USA drone capturing by the Iranian scientists was possible. "Interference through the plasma technology into line of communication, has been achieved some years ago. As we all know, covered in the different disguises, but now accidentally you see it physically, this behavior here. There are a lot of advantages in doing this, it's time to enlighten and then you show it."

When asked how much can this system run in terms of strength the Austrian team responded that

this is what they are trying currently to test and measure, the increase in the compressed fields' strength.

Mehran Keshe:

The Austrian lab has received the system we used for 129 Tesla detection of the fields, because they are going that way. It is very hard to understand how the system works, so when they give data, we can accurately measure the bandwidth of the strength fields. The system was used, some four or five years ago. Now it has come back to use to actually measure all these fields, what is coming, what is going, what is the strength of the plasma flow, without the motors anymore, and what is the strength of the soul of the system? In due course they will explain. What about if you turn up another system or is the only system you have at the moment?

Klaus:

Interestingly, the systems we just delivered to the people, we had running two days ago, there is an interesting story, because we delivered three of the portable field units and we ran all the 12 reactors of the units in a circle, around the reactor.

You just were feeling what we are talking about, and the field increased enormously. We created in a compressed field, another compressed field. For me there was a very shocking message, because when I went into the field I looked at my hand and I saw a kind of smoke coming out of my hands. This was the first time in my life I have been in this kind of compressed field, and my first reaction was "emergency, it is hot, you are burning yourself". I just jumped, 50 centimeters to the left and I tried to save my hand but it was of course cool, everything was cool and it were the fields, which became visible. Maybe just for me, I do not know if this experience is around. It was interpreted as a smoke, as a strong smoke, which came out of my hand.

Mehran Keshe:

Did you smell any burning?

Klaus:

No.

Mehran Keshe:

You do not have any hair on your skin you could burn?

Klaus:

No, there is no burning, everything was cool. There was no temperature. I mean there is the smell a bit of the reactor, when we established the light, there is a specific smell but this does not have anything to do with heat.

ESTABLISHING THE LIGHT

Mehran Keshe:

What do you mean by establishing the light?

Klaus:

Establishing the light is our common aim. To establish a constant plasma light, best of course without having any sources of plasma devices. This is our aim, which we carry in ourselves and this is what we are here for. We have currently the possibility to only go step by step to this state. There is something which needs to be considered. If we increase from day to day the fields to more compressed fields, we have to follow as people, as humans and to adapt to these fields. What happens is that we are constantly discharging all emotions which are not in balance from ourselves, which is more or less a process of releasing the filters, in our head, around the soul and increasing the space gap of our self.

We found out that this process, maybe it is just with us in our group like this but, it does not work from today to tomorrow. It is a process we are all in and we need to go through as a whole group, and this is why we go step by step to the state of constantly releasing more and more matter state help, which means power supplies or whatever we are using, in order to come to the total state of having. This is our vision, establish the plasma light without any matter state around. This is the process we are currently going and moving to.

We also needed some time to set a common aim. If people meet, this is in all countries, everywhere, it is the same, they follow some-

times different targets, they have different aims, they have different intentions. And this intention was something we needed to synchronize, in order to go forward the next step, in order to break down a new barrier and open a new door. This is the process we are currently in.

PLASMA MIRRORS

Mehran Keshe:

Can you explain to us what are you going to show us today?

Klaus

Yes. What I asked to show you today is something very specific, because as I said before, in a constant process of trying to discharge all our emotions in order to remove all the filters inside of our head, inside of us, we are trying all together to reconnect, or

to find our way back to a state most probably they have been already in the past, or in a time we choose, and as soon as you start building devices, as soon as you start building reactors, you always come across of finding out how to measure the fields and how to work with the fields. You would like to know, have you successfully set up a system? Do you have any leakages inside the system?

Do you have anything, would you like to improve something? And this, of course we all would like to improve always to increase the field strength, to create more and more compressed fields.

And one of these tools we are using here are, as they are called the plasma mirrors. They are Nano-coated copper plates. Nano-coated copper plates, this sounds very simple, but these copper

plates are Nano-coated in a way where we need 2-3 months, sometimes even longer, to create these plates or these compressed fields.

What I found out is when I was working with these mirrors, with these strong compressed fields, they gave like a lot of other plasmatic device, or most probably all of them, they give us the opportunity in order to connect with the brain and to discharge the emotions, which are not in balance. This happens automatically; also if you plug in a Magrav or if you plug in a Plasma Power Unit, or if you create any GaNSes.

In this case, we found out that the mirrors give us good opportunity, a good support, in order to speed up this process of recharging, of letting go and discharging all the gravitational fields, we have too much around us. As soon as we are going into the work with the fields, as soon as we discharge, as soon as we break down the barriers, we very slowly are able to feel again the fields around the reactors, around the GaNSes, around the balls or around whatever we create. When we went this path, in order to create these reactors, we used and we still use these mirrors to test what we have done, and to improve the systems.

We were asked to show and even to put it on the shop, that they can be ordered, but I have to say these are not products we can produce in mass. We need 2-3 months sometimes longer, because 30, 35, 40 times they go through a specific Nano-coating process. And as soon as we feel that they got the right, compressed, strong field then

there is more or less the green light that they are finished, and that they can go out.

Currently we have 2-3 pairs of them. We started them some months ago and the first one is going to be finished in about 3-4 weeks.

This is a beautiful tool...

Price for a pair - thousand euro, and for us this is far too less. Because you are working so many hours on it, they are a piece of art, and we cannot produce them in mass. Like we are running currently, as a combination of production and research, we currently can produce maybe 2-3 pairs in 2 months. Mainly I wanted to show it is an instrument, as a tool working especially when you are creating them, getting to know the Nano-coating process, the fields better, and using it as an educational tool. These are beautiful educational tools, in order to work with the fields.

PLASMA INTERFERENCE

Mehran Keshe:

Can I ask you a question, Dr Klaus? Put on that machine, which was making that noise, the noise-maker.

Klaus:

So, three, two, one, go.

Mehran Keshe:

To use this unit [plasma mirrors] around your microphone and see if you can interfere with the noise. Be careful you do not touch your heart. Hang the microphone somewhere. Can we see if you can interfere with it?

Klaus:
Yes, it has been on, we did not change anything.

Mehran Keshe:
Can you take that microphone off and put your disk down, and switch the machine off. Switch the noise making machine off.

Klaus:
It is off, machine is off. There is an electronic switch, which switches between this visualizer and the camera and this electronic switch seem to be activated by the field, somehow.

Mehran Keshe:
Yes, that is what I want to tell you, show you something. Put it again, try it again. Let's see if it repeats itself. Put the camera down, the microphone down in this place again. Repeat the same process, science has to be repetitive and then we will see what it is. You had the two disks. Now, can we have the noise on, please? Now you can understand how... can you switch back off again?

Klaus:
Okay.

Mehran Keshe:
Try to see if you keep the disks far away from the microphone, is still the same gap. Keep them as far as you can in your hands, but the microphone to be in the center. Come forward to the microphone and open your arms but the microphone to be in the center. And if you look at, it is the interaction between the two. Open your arms further and further out, go as far as you can, as you are flying. Okay, what I want you to do is switch that system on and bring the hands together to see. Then switch the system off. Put these

two disks totally away, on the other side of your lab. Not near...

Klaus
Okay, we are ready.

Mehran Keshe:
Now, switch on the noise-making machine and see if we lose the picture again.

Klaus:
Can you switch it on, please? It is lost.

Mehran Keshe:
Put it back on. The system you carry has nothing to do with the two discs you have. The machine you carry is what is known as a frequency jammer, plasmatic frequency blocker. But at the same time, you still hear commands, you still hear the voice, but you switch at a certain frequency, certain things. This is the end of the military warfare. This is what is the beginning of the change of science.

No interferences, just matter of plasma transfer, but you can use the same thing to feed the man.

Here we hear the noise. In the process when you go further, this is why if you remember, three-four weeks ago before Christmas, I said to you: "you went backwards into the matter state, than going

forward into the plasma state". This is where we need to be. And in that process it is a very easy demonstration, how easily you can take command. But how easily you can show that you can transfer energies, in your core, that you feel filled up, you feel no cancer. How far is the core from you, which is running?

Klaus:
About six meters.

Mehran Keshe:
Is it mobile? Can you move it twenty meters away and see if it still has the same effect...

Klaus:
No, definitely not! We can make it mobile, but not now.

Mehran Keshe:
You see this is part of the space technology, which now can be physically shown. Non-motor reactors have been operational for a long time, and then you can see the transfer of energy. What you load in that core, the sequence of what you load, will switch over electronics - no missiles can be fired. This is not an electronic jamming, it is the plasma interaction. If it was electronic jamming, in a certain length, we would not be able to hear you and everything else with it. This is a beautiful time and the way you shown it. And what you showed us with the two disks, you can interfere with it up to a length, but it has to be around a computer, not the microphone, that you can block, the chip which has found a match of. This is, what we said, beginning of the end of the war equipment. We can literally jam anything through the plasma. Not to jam but bring it to balance. This is the beginning of disarmament in the matter state,

and it is beautiful to see it, to show it in a live presentation, because I have seen this many times before.

And congratulations, you have gone back to where you started. You have to be observative of what you see and what would be interesting to create a condition... Very much go back into how you used to produce GaNSes in a salt water. See how with these field interferences, you can transfer the energy. If you put, for example, orange into your GaNSes or your dynamic system on the other side. you can taste it in the computer, where you put it there, now. This is part of the space technology transfer of energy, food, and everything else.

Klaus:

This would be perfect for a specific computer brand. Not using oranges, but other things.

Mehran Keshe:

But in a way, it is part of the space technology. Zero-time communication is part of this. This is what few weeks ago I told you we have to move back into non-motor reactors. If you go back, there is one key element in all the tests, which I have deliberately kept away from the work and the teachings, because mankind is not ready for it.

But on another hand, we are developing it to be shown here. There is a purpose and time. In a way, if you have got a jar next to you with whatever water is in it. If you put the GaNS water in your dynamic system on the other side where the noise comes from, you should be able to taste the orange in that tank, and this will confirm the transformation of energy of food. I have done it many times,

now it's interesting how it is shown and maybe it is the confirmation of the correctness of detecting any system. We can block off, you cannot be seen, you can switch their electronics. If you carry on with it, at a given strength it will be irreversible.

Because what you do, you change the line of the

vision of observation of the camera, with your system. Not so much with your electronics and your computers. In space, we use this to see ahead of us, because there is no windows, and it will bring us a lot of information. In a way, in animals they call it the sonar. This is a plasmatic sonar, in the depth of the space when you travel at the highest speed. It brings you back information, as fast as it goes. This is what we call, a sonar at a space beyond the speed of light.

You can see what is ahead of you; you do not jam it but you receive it back. Because of its gravitational field as a plasma, will call it back as it goes. You do not need a reflector, as present radar. The reflector of the strength, is dictated by gravitational field strength of the way which you send out. When it becomes at certain strength it returns. 100,000 light years away, fifty thousand light years away, hundred million kilometers ahead of you, because the field of the plasma travels at the depth, at the strength of whole Universe.

This is one of the first times you show it, and then we can explain it. When in the present radars, you wanted to detect the aircraft, you have to have object that can reflect back the radar's signal, then you know where it is. With the plasma technology and in control of the Magrav, what you call magnetic and gravitational, you can decide how far... That is why I asked you if you can move it further out, then you see you can control the depth of it, or you can adjust it that you can bring that computer or the camera in the range or out of the range.

In Austria you are achieving a lot of breakthrough knowledge, but you do not see it because you are looking for something else, you do not see what is developed. This is why I push you to go in the direction, because I know where I want to take it. If I do it, I become a magician. Now you showed it scientifically, and it works, and it is there.

Thank you very much for your work and your team!

Try to question the unquestionable, as I did as a boy of eight and nine and ten, and then try to answer it yourself, if it makes sense, in truth. Try to look at the broader platform, not too narrow-minded understanding. Try to **see parallel in the world of creation**, then you become the Creator of the new world. Try to go in the essence of the motion of the fields of the creation, as the **matter itself is a collection of the fields**, then you break into the true essence of the knowledge. Fundamentally there is nothing wrong with the physicality of the man and the soul of the man. It is just a man who has conditioned himself to accept "others understand more" and "I am not good enough". **Every man is good enough** that it comes to the point of the last man standing, he can stand and become the man. The fundamental physics of today has to be answered in the **dimension of the motion of**

back and tells me what is happening in town, I stay a village man. What I put on the table today, has to be answered by every single man, before every man can become men of the Universe, by himself. This is the point where we separate the man and the man. The man of Universe and the man of the village of the Earth. The man who decides to stand and keeps his next generation on this planet, is **vulnerable to physicality** of the accidents of this Universe, and the final point of amalgamation with the creator of itself, which is the Sun. This is the Sun (Fig.1A) - a plasma. This is the Earth (Fig.1B) - a plasma. We said the **bigger plasma always feeds the smaller one**, and that is how he keeps his position, the Magrav position (Fig.1D). In that process, the field of both travel through. On Earth stands a plasma called the soul of the man (Fig.1C). Where does the field of Universe

by Keshe Foundation

Parallel World of Creation

The Knowledge of

the fields, not in the motion of dimensions of the matter what the man sees in the dimension of physicality. Try to ascertain the interaction of the fields. **Why do I feel this?** Try to understand if it is impossible, how do I feel in my soul and the soul of my physicality, in my physicality and the physicality, which I live within? Is the physicality I live within the **neutron**, and my physicality the **proton**, and the soul of my physicality that **electron**? How do I and how can I interact with it? I am a citizen of a village called Earth, how do I go to town and how the people in town travel? The road has been passing my village, I never dare to jump on it. Is the soul of the man so **ashamed to take the soul of physicality** with himself to the dimension of the Universal Community, that he goes on his own, does not want to bring embarrassment with him? He goes every night or day and you call it a dream. It is like your brother going to town and comes back "do you know, in town they have lights like this, and lights like that", but I have not dared to go myself, I listen to him because he comes

feeds to the soul of the man? Does it matter how high the man stands, that benefits by which fields according to the height of his soul, in conjunction with the center plasma of the two? Has man been fed by the universal field energies all his life? Can we learn from this, to be able to feed the man without killing? When we feed the soul of the man, and the man through it, feeds the soul of his physicality and then the physical man. The science of Universe is very simple and you have to be aware of the basic knowledge that you see how the play is done. Why and how I started teaching about Carbon-14 and the balance fields of it on the human dimension? CH_3 , and in balance of it with a Carbon, or what we call Carbon-12. If you understand and understood these, in so many ways we understand very much like what we call the initial sugar, which is a CH_3 , it is **giving off the energy** both, **to the soul of the man and the soul of the physicality** of the man. It has been hidden from us, or was and has been hidden from us up to now. In the dimension of life of the man, man has lived the **two-track life**, as

I said before. Now he has to decide, in which dimension, at which time, and where he wants to live and manifest itself. Then many of you will understand - "Do I need to work, eight hours a day, slave my physicality to the dimension of suffering of my soul, to satisfy the dimension of the existence in matter state of today?" Try to **understand the motion of the fields**. Try to understand, every field has its own interaction not with itself, but with the other fields on a head down collision, while at the same time is towing another. This is where most of you fail to understand. You stick to one and you say this field is in interaction with the other one, while itself has its own gravitation field and

it is". If you remember, I used to put a large, full glass of water and then split it, a little bit in one, and the amount, the rest of it, in the bigger glass, and I used to say: "Now we know electron is made of the fields of the same as proton, because they both came from the same neutron". And he told me: "you are genius, nobody ever thought about it". No! It is

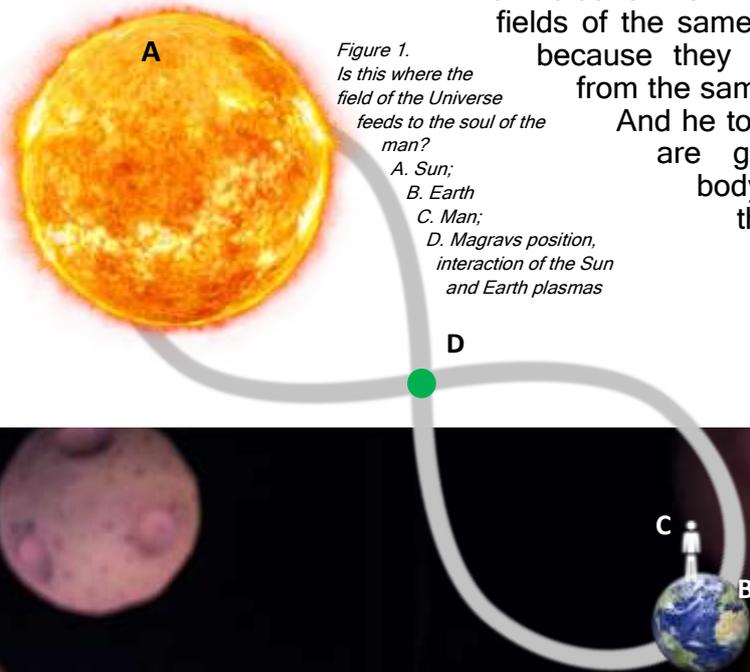

Figure 1.
Is this where the field of the Universe feeds to the soul of the man?
A. Sun;
B. Earth
C. Man;
D. Magravs position, interaction of the Sun and Earth plasmas

Creation is within You

264th Knowledge Seekers Workshop
<https://youtu.be/hmISPSDhFzE?t=6046>

itself is getting towed, while the one is getting towed is in interaction with another field. The world of plasma is very complex, and it is you who have to decide where you want to draw the boundaries. The **knowledge of creation is created within you**. It is you who have to nourish it, to flourish. Today's teaching is to put a new dimension, a new brickwork, a new foundation in the world of science, because we think the man is ready to do and the man, in knowing this, will build a better future for Humanity and Mankind in the space. But, how could you build a house when you did not know what the brick is and what it was made of. Now you understand the brickwork, you understand the structure. You have to endeavor, to go deeper. I have just opened the door of the knowledge, it is for Humanity to structure. It is for Humanity to go a step further. Some years ago, I explained something very simple. I used to put two cups, three cups on the table and I said: "You ask any nuclear physicist, what is an electron". And he says: "it is just something there, we do not know what

just that we did not question the questions, which we did not want to understand, because then we had to find an answer to it. Now, we explain, one is in each cup, and why, and who.... Now is for us to decide, now we understand it is the same ice cream, but one could be a strawberry and the other ten could be vanilla, and then we have to decide how did one became strawberry and another vanillas, because not all the ice cream scoops are of the same. These are part of the understanding we need, we have to analyze, we have to understand, we have to develop, we have to expand upon to be able to go to the next steps to become the passengers of the Universe.

Now, the simple question for all of us becomes one thing and that is: **through the work of an atom, has mankind found the work of his own soul and his physicality?** And then, the next step in the structure of the knowledge is: **how truthful man is with himself to take its new understanding to the next level?**

BECOME THE HUMMINGBIRD OF THE SPACE

by Keshe Foundation

Look at these birds and look at the man. We go shopping and we buy clothes. There are no shops for a bird to change clothes. **They go through the evolution to fit the environment they are in**, or what it needs to make them separate. When man goes to space, there are no supermarkets and nowhere that, "today I want to go with this fashion and that fashion".

I presume after a few years we give up on clothing, because they will be rags, and secondly do we want to get to that to space? Or do we train ourselves to adapt ourselves?

It is the man who has to decide his position, and what he wants to see, and what he wants to close his eyes to. What he wants to see through the eye of the soul of the man. These will come to play a lot for us, in a very near future.

Have a look at this bird and then see, you decide, **is it the soul of the bird**, or how fast is it changing? Is it the light? Even, let's say, even if it is not real, is

man going to be like this, now that we understand the operation of the soul? Do we see the physical change of color, or did this bird manage to touch us, through our soul? If this bird can do such a thing, what about us?

Now that we understand the operation of the soul of the man and the need - look at the color.

I go to Africa, I want to be black, nobody knows I am white, that I am one of them and I can live in their environment. I go to China, I want to look Chinese. I go to the beautiful land of Iran, I want to be suntanned, and be able to enjoy the language.

Can I, by changing my color, learn a new language automatically? Or I attach my soul to a someone who speaks the language, and I can speak?

These are not fairy tales anymore. In the coming time, I start teaching how to progress, how to develop these things. At this point of time we are developing our people to

understand. If this bird can switch colors so fast, does it do it through its **soul**, or does it do it through its **emotion**?

What is important is not just one part changes, many parts instantaneously change. The body color changes, the head color changes. If you look in some detail, the feature of the bird changes too. Is it camera?

Is not. It is the soul. This is the feature it needs, to be on this planet. The next phase is, when is on Mars, or when is on Saturn.

We have a very wrong understanding of the space flight. At this moment of time, no one has taken their clothes off, of the spacesuit, and traveled in the space. Nobody has taken that plunge yet. But, if we understand the process, can man do this?

We are not a solid matter, we are dynamic. We are made of dynamic plasma.

How long would it take us to change, physically?

We say we need oxygen to breathe, we need water to survive. In plasma technology we have shown we do not need oxygen, we need the energy to be transferred into our lungs, that it can keep the blood activated, that it can circulate. **How fast would we mutate?** Or are we always locked into this planet and to a spacesuit, or a spaceship?

Would the development of new space technology, coming out on the back of the Iranian scientists, on the back of the Chinese scientists, on the back of the other scientists around the world. The first time we tried, we were too naive, and too scared. We sent the dog up first and then we sent monkeys next.

Now that we have opened the dimension of understanding of the work of the space, through plasma technology, would we let a dog or a rat outside the spaceship and see how they survive? Would they survive? We have not lost anything in the depth of the space. Or does our soul take a new dimension and evolve immediately, to respond to the space like this bird?

We are afraid that 'when I freeze'. We are afraid because we put something out, it might die. Sooner or later space agencies will open this door. This will open our eyes to the **capabilities of human body**, to the capabilities of the conversion and the evolution instantaneously to a different level of the strength of the soul of the man, or the animal.

This will show us, if like this bird we can instantaneously change, that we do not need to breath. We are afraid if that string which is in that clothes, we are attached to the space lab goes, what is going to happen to us.

We have not tried to see, we can survive in the depth of the space. It will come. Somebody by accident, or something by accident, or space travelers will indicate that. Will bring it out to us. Would we evolve so fast? Not changing the color, but the way we were born

out of the beautiful womb of a mother, and we changed from a life of a fish inside the water of the womb, to become an air-breathing instantaneously. Would we evolve into the new dimension? **It is our fear holding us back** or we need time to evolve gradually into the new space? The answer is yes, we will evolve instantaneously, because the body of the man is dynamic, in plasma condition.

When we lose our fear, then our soul - our soul of physicality - our physical dimension of the plasma, will take over. We can create as much vacuum space as we like, and put someone in and see they explode, they expand.

That would not happen in depth of the space. Would we come to the point that we work through our soul, than the soul of physicality? Would our soul create a protection for the physical body, to stay protected that it does not need a suit?

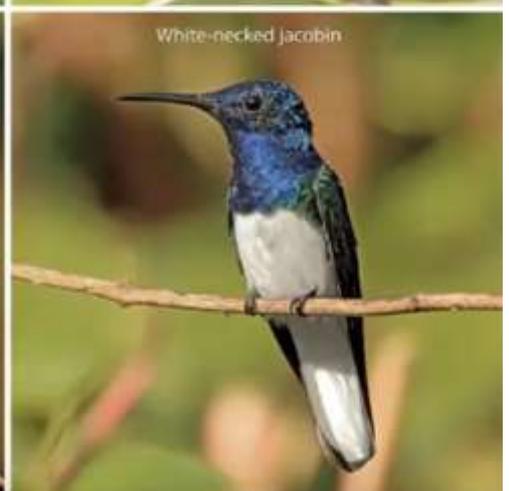

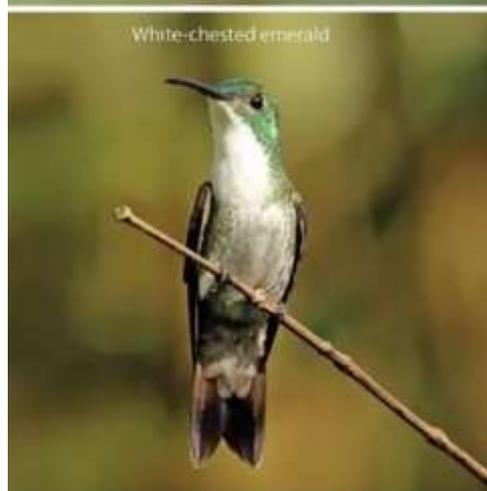

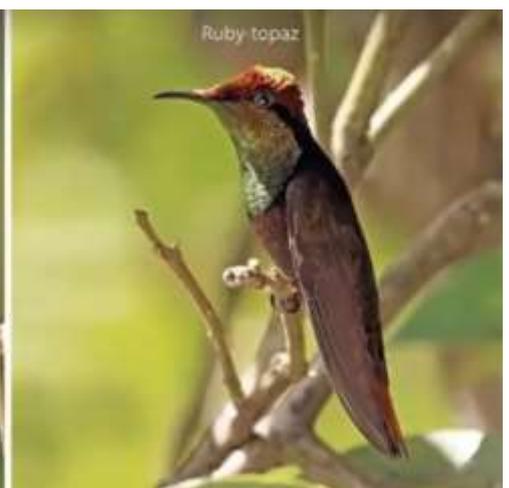

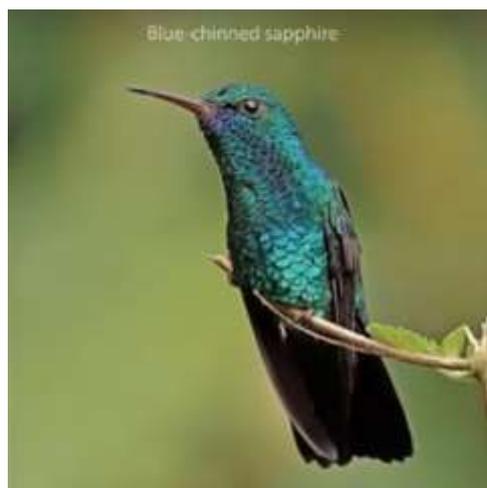

As we enter in a coming time, building the first international space group, we will have to handle this. In the next few

months, in the first meetings of these space organizations, there is a need for change. How much of this life we have created is a physical fear and not the truth about the real life of the body of the man, or the animal?

We got to understand, at the moment, there is a number of problems with our flight system in the space. Because we cannot create gravitational-magnetic field to be stationary, we are travelling at huge speeds and if you throw something out you have other dimensions which come into it.

With the new space technology, where you can create gravitational -magnetic field and be stationary in the space, you do not need to chase, or to run in the fear of you not coming back. It gives the world of science a new dimension, that we can go for a walk.

We can stand still and put outside things. Things will not fly the way we see, suddenly flying away from the Space Lab. Because it is a space lab which moves them behind, it is not them running away.

The whole new space technology will create new conditions for us. When we can stay stationary somewhere, let's say between the Moon and the Earth, and we can open the door and walk out, there is no rapid flow.

Would the space of time allow us to go through the evolution of the soul of the man, that we can accept the new condition? Man has shown many times going to rapid evolution when there is the need for it, and **this time will not be any different.**

Then it comes to the point of: do we have the right to test our own evolution in the depth of the space? We send the dog, we send the monkey, Chinese sent their rat, the Iranians sent something else. We have always been scared to be in front, and we are very brave.

Who? Which one of us is going to take that step to walk in the open space, and like this bird await the **instantaneous conversion of the soul of the man** to protect the man?

If we see the dog can convert, how does it do it? He cannot teach us. Ask this bird 'how do you do it?' He cannot teach you but is in essence of his soul. How does it change chemicals in the feather, or it is the essence of the soul, which creates the condition to the eye of the beholder?

Going back to the teaching of the past and knowing where the work of the Keshe Foundation is coming to, in the coming time. Which one of us is prepared to go through the evolution of the soul of man?

This is real. You cannot build the machine for it. You cannot condition it that it will be there. You cannot make it on Earth. It is a jump in a pool of universe, you sink, or you swim. But even if you die physically, your soul is free. Will it take a new dimension and unfreeze you from their cage of the physicality of the man?

Because **you do not die.** Now the body, this shape has frozen, but the soul cannot freeze It has no

dimension to freeze. Would you end up to be a plasma, or would you end up to take a new shape in front of everybody else? Or, you change to something and we pull you back in, and you become a human again?

These are the realities, which the man of space will face very rapidly. Do we need millions of years to go through evolution, or we leave the physical evolution away, done with, and we go through the transformation of existence of the environment, in respect to the soul of the man, at the point of manifestation? The process of the space technology in the next phase, will force us to test. Are we going to have discussions on morality? Are we going to have the discussion on what is right or wrong? Or are we going to have a condition - let's test it and see.

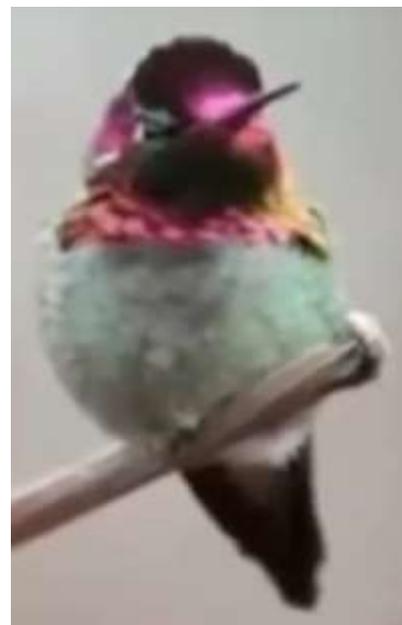

In our world, in the universal travel, we have no spacesuit for the soul. And then what happens when the soul of the man has to deal with the existence of a body, as you think you might freeze, and where would it go? Would it convert it, or would he work through it? And as every cell of the man is dynamic, we will go through the motion of conversion.

We all know the emotion of fear and how our heartbeat goes up, our body sweats, we shiver, we breathe different to adjust into what is built up in the body of the man for that moment. But we have never tested the condition of no air, for the existence of the soul. Would the soul convert automatically the body to take energy from the space, without anything else? Or is there enough energy in the space, in certain points that it suits us. Is like, you can swim in some places and you cannot do (in other), because it is dangerous, it is too rough.

Would you find environments in the space, that it just suits the energy of our life to feed our soul, and we are walking, and it is fantastic? Maybe we get the wings, maybe we find gravitational -magnetic evolution, like the way

our soul of physicality lives with the soul of the man, and find a position? Then, **this bird teaches us a lot.** Actually, it tells us how backwards the mankind is compared to such a little thing.

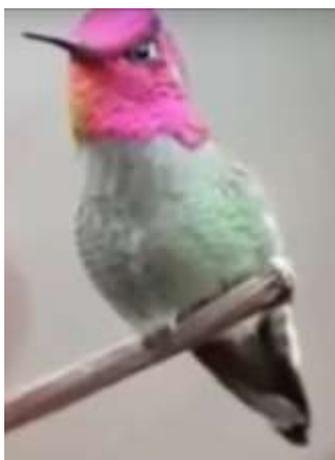

If we take this bird with us, that is changing so fast the color. Would he be the best candidate to take with us, and let's see how he changes? Would it float, or would it suddenly start making new colors and new noise.

Do we need to take the partner with it? With **love of the partner**, interacting, will both stay alive, that they **feed each other to confirm their existence**, and their love for each other?

It is not like on Earth, that you write to somebody 'I love you' and you get no response back. There is the love of the soul and you know if your partner is in love with you. This is that simple!

What we call CIBRU - China, Iran, Brazil, Russia, India, and United State - Space Agencies in plasma, will work as the first organization to test these things. The structure for it has been set. And then would it be an American who takes the first step? Or, Iranians are more proud to see we are the first one? Or, we will get six of the Six Nations walking together as one? And would the **love of one hold the others to stay alive** in the dimension of the soul?

Would we see the change, the way we see a child born from the womb of the mother, as a swimmer, as a fish, to a walking man and breeding? Is there a hidden system in the physicality of the man, which is there for this position?

The way we change with one breath from a fish to air-breathing, would we change from air to soul breathing?

These things are on our reach. One of us, or some of us will test it. And if we fail the first time, would we develop technologies that we can create conditioning of the transformation of the soul of the man, and the physicality of the man through dimension of the space?

We cannot leave the life, the way we do, that we have to take, when we go camping, the food, the water, the bed, and everything else in the space. We will run out very soon.

In the Plasma Science and Technology, in the Keshe Foundation laboratories, and a lot of you at home, have developed different ways of energy transfer, and other things. We are creating new systems gradually taking you through it. But at that point, it is the last man standing. It is you who have to make a decision - that this is not committing suicide, **this is committing to a new life - detachment from physicality**. It is a big difference. When you commit suicide, you end. When you become detached, you start a new life, without a fear to it.

Would the cycle of the soul of the man go through that transition? Many races in the space have done and they have succeeded. Many races out of the fear failed, until they gain confidence that "I can live through my soul".

Many races, at this moment, are going through the transition. For us to go from a beautiful color of a black skin from Africa, to become the beautiful yellow skin of Chinese, to the wonderful color of the color of the Iranian, brownish, and then to the white - it has taken us thousands of years of evolution.

Would we learn like this bird, that we can change color instantaneously, and with it, **it shows our emotion**? What does this bird say? "I am in love, I am looking for a partner" - why do you think he does it? And another partner, who has the **same soul strength** says: "I am here, come and catch me, we do it together".

With the color, he signals the soul. Then mankind has to get ready for this transformation. Mankind has no choice. We have put mankind in that direction.

But you have got to understand, **there should be no fear**, as in the time of "dream", as you call it, your soul always takes these steps and travels without the dimension of physicality.

I think you have your answer. I think the Iranian Mozhans, and the Americans, and the Russians, and the Indians, and the Brazilians, and the Chinese will walk out with pride, and stay within the dimension, which one, whichever decides. Because we do it in the time of dream, which means our soul travels the dimension of this universe without the physicality. We leave the physical body in the bed.

Those of you who had doubts in it, I think you got your answer. This bird has come home to roost. We are here and if you listen to all my teachings, especially since last March-May, **I prepared you for this day**.

Many of you ask: 'Where is my soul? How can I find it?' What would be the transition?

These are not anymore: "if"s, "maybe", "when", "not my time"; with the new dimension of space technology, gravitational-magnetic fields, which is coming into operation, with especially what I see is coming from the health units, the Plasma Field Units, the new systems, which will replace and literally eliminate drugs, you will see this.

Is not "might be", **it is already here**.

How are you going to handle the operation of your soul? You try to find it, you ask "Where is my soul?" How do you come to face the detachment?

Holography

of the **by Keshe Foundation**

PLASMA 101

Universe!

What I try to do this week, is something, that not only opens the eye of some of you, who are familiar with the science. In respect to the reality of life, in the world of science, and how scientists are developing different aspects of technology, in the background. It is taking hold in a very “elite scientists” way in the world. With it, a lot of terminologies have been created and these terminologies are very hard to get out of the system because, a lot of people accepted them.

Interesting is, that these terminologies, in the world of science and creation of Black Holes, which started with Stephen Hawking, still carry on. As I said, “It has become very difficult to change.” They come up with so many theories on it, that these theories have built up its own momentum, and it is getting defended by scientists in a very aggressive way. New technologies are coming in, that by development of these technologies, we are creating more fallacies, and more unacceptable knowledge, in the world of science.

One of these is called the 3-Dimensional State of the Universe, what they call “The Hologram”. Some of you might have heard this terminology. What is this terminology? It is that the whole Universe is a hologram, there is no reality to it. The reality is that the Universe is a flat 2-dimension, above, and what we look at, is no reality to it. But, we have come to accept it as reality.

Hundreds of millions of dollars are getting spent, on this “fancy talk”. It is good for the Keshe Foundation Knowledge Seekers to understand, what this is. Very soon, somebody will bring it to a point of reality.

What is the hologram position of Universe? It is considered that the Universe is flat. The reflection from this flatness creates images inside, which are not real, being the galaxies, and the stars, and everything else. We can redefine this hologram principle. They say there is a picture, 2-dimensional picture of the galaxy. (Figure 1A) and then, underneath of it, we see a galaxy. (Figure 1B)

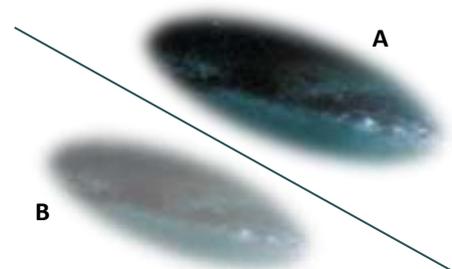

Figure 1. Galaxy and its light reflection

Actually there is no galaxy, it is just lights shining into it, that gives us that image. One of these non-real things is planet Earth because it has got again image on the surface of 2-dimension. This partially comes, and started, due to a lot of computer programming and now they are writing computer programs which actually can make it and show it is .

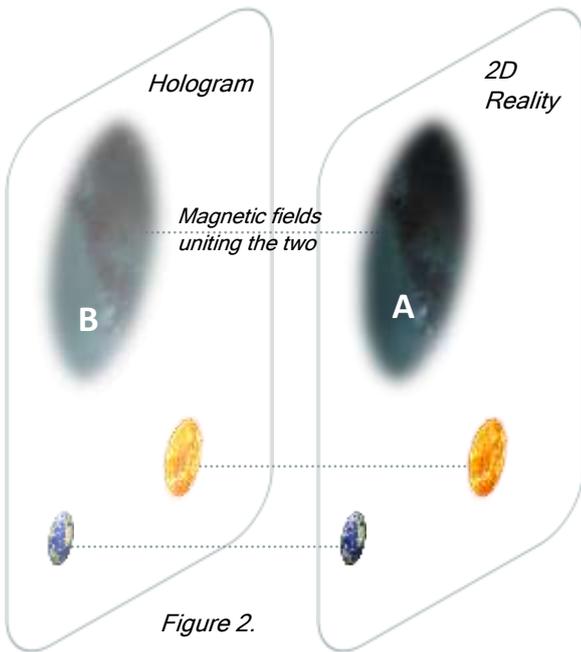

Figure 2.

In reality, no one has asked a single question: "Why these people are spending so much money on a lot of fallacies?"

If there is a galaxy (Figure 2A) it creates an image (Figure 2B), and there is a pin across it, that it holds its position (between the galaxy and its image). It is imaginary pins, but magnetic fields are there. You see on the surface of the 2-dimension, this is to them the reality, this actually exists. And, whatever we see underneath is just hologram. The real life is in 2-dimension, and we see, what they are explaining. In reality, nobody has told these people that if you stand somewhere on the Earth, and you look at the Sun, the Sun is flat (Figure 3).

None of us sees the Sun as a full sphere, we always observe the Sun as a flat entity in the shape of a circle. We know the Sun is there, because, when we look at the Earth from the Moon, we see Earth again flat. Is the Earth we are living on flat? The Earth is round because we know, we mine in it, we travel around it, we go everywhere of it.

When it comes to the new science of holography, and in a way trying to convince you that the Universe is flat, yes, in the eye of the man, as an observer, it is flat. In reality, it is not because the man on the Moon, sees the Earth as a flat disc. The man on the Earth, sees the Sun as a flat disc and the Moon as a flat disc.

The theory of hologram, holography, they have created dimensions to it, and they have created to say, that it is a flat entity. But, what is interesting, what this topic, this subject brings up is that they have managed to create hundreds of millions of stars, and they say they are hologram. They confirm that it has feature like the Earth outside, like if we have eruption inside the Sun, we see it on the surface of it, because it bubbles up. They say that this surface is flat (Figure 2 right), and it is 2-dimension, and this hologram of the Universe, is a reflection of a flat surface (Figure 2 left).

This changes something very fundamental. For the first time, mankind confirms that the Universe has a face. There is an end, there is a surface, exactly like the surface of the Sun, the Earth, or the Moon. In this theory, they are building up, that the Universe has a face. The Universe is Unicos. As we stood here and we watched the Earth, and the Sun, and the Moon, if you stand in another dimension, we will see the face of this Universe.

Figure 3. Sun seen from Earth

As it is in Book No. 3, we are part of an Unicos, there are many of these flat surfaces, with a 2-dimension pattern. Because, actually, the light through the Universe shines on its surface, like a fish in the ocean.

But, one fundamental question, to ask from the scientific world, of what I can explain, is that; when you are on the sea, on a boat, and you are sitting on this flat surface of the Universe, and it is as transparent of anything, is this Galaxy a fish, swimming in the ocean of Universe? As it does, if you were on a boat, on the high seas. Does it mean, that our Universe has a started opening up? Does it mean, now that man is getting to understand more, in its mistakes, it is confirming the existence of the Unicos?

Originally, about 10-15 years ago, this came up, because people could not accept the totality of, everlasting black hole, that it gobbles up everything. A lot of scientists originally thought "If everything ends up to nothing, what is going to happen to us? So, this is a mirage, because we are still here?" In so many ways, nuclear physicists, the cosmologists, and many astrophysicists, altogether, ganged up, to confirm. There is no existence. There is nothing because, we were convinced, that we all end up in this black hole, created by Stephen Hawking, and we never come out, and that will be the end.

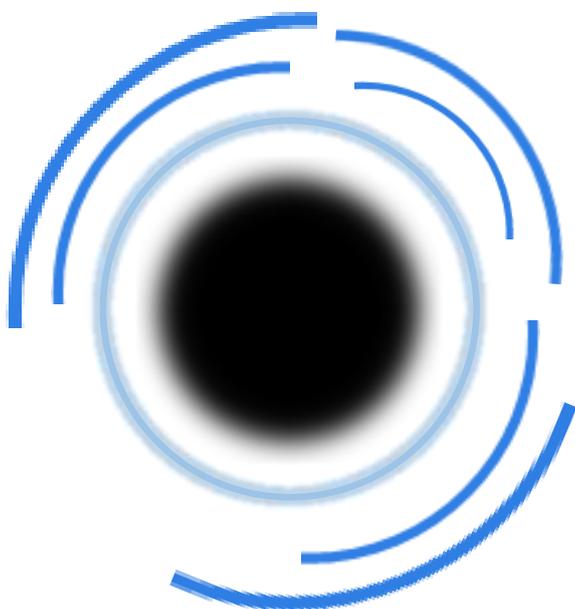

Figure 4. Black hole with atmosphere (light blue) and ripples (dark blue)

If you look at the fundamental principle of understanding of the reality about the interaction of the pattern of the fields of the Universe, it is as much magnetical, as it is gravitational. What does this mean? It means, even a black hole, if you consider it, due to confirmation of its existence, has an atmosphere.

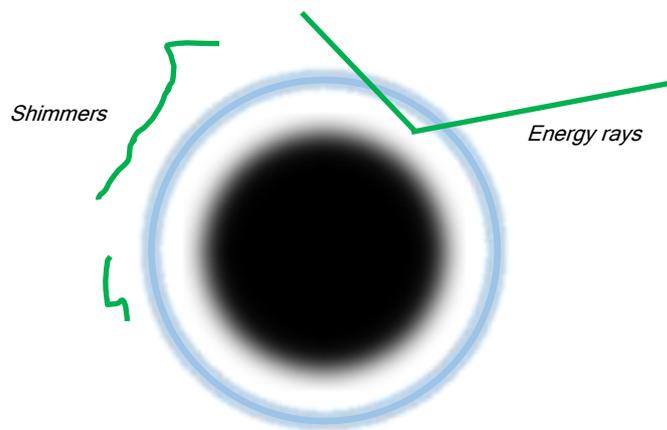

Figure 5. Black hole with atmosphere (light blue)

As we see, with the interaction of the fields of the planet, with the interaction of the fields of the Sun, it creates its own ripples (Figure 4). And, this is what the world of science, up to now has denied. At this moment of time, in the world of fantasy of the black hole eating everything up, we have never allowed the reality that as much as it is got gravitational, it has a magnetical and atmosphere too.

As we have seen with the Earth, which, as any energy of certain mass enters it, it creates light with it, it creates dimension of existence of an atmosphere. It has happened on the surface, in the boundary of the atmosphere of the black hole. We see these ripples of confirmation of the existence of the atmosphere of the black hole. When you look at the black hole in the background of mosaics, of all the galaxies, and the fields of the Universe, as they cross (Figure 5).

We see shimmers, we see play of games. So, it means, for the first time, we can confirm a black hole is an entity. A black hole is a confirmation of existence, very much like the Sun, the Earth, and like any other entity in the Universe, where not only it has gravitational pull, but it has its own atmosphere. Stephen Hawking brought us to this mistake, that we always looked, it is one gravitational field but, in fact, it is the same as any other entity, it has as much

gravitational as magnetical. In the Paper, which I wrote, "The Creation of Black Holes" this is what was the meaning, and the emphasis on. That is why we see lights, on the magnetosphere of the black hole, it shows that it reflects light out, as much as it takes in.

As much as it pulls in, in interaction with the fields of its magnetical field, it creates and releases light. The way we see, when meteorites enter the Earth, and they burnout, and they clear light. How come, all those lights get attracted inside, but we still can see on the fringes of it outside?

Those of you, who go into Space Technology, in the dimension of the travel, you will understand, this is one of the biggest gift mankind has ever been given, high speed, faster speed, transportation, using black holes from one spot to another.

Do not forget what you call "black hole" means the centre of intensive fields compactness, nothing else. If you came from Earth, to lock into one, and on a voyage, to lock into the next one. You might pass the magnetosphere of it but, you can increase your speed beyond the speed of light by billions of times.

Man, in time, will come to understand the beauty of the black holes. In the recent past they call it "dark energy", "dark matters", dark energy in the galaxies is the cause of the movement. And now, this theory is totally been abandoned by the cosmologists and nuclear physicists, because it does not exist. Anybody that speaks to you about "the dark matter" are of the old generation, they have not read the new science book. Because now, we understand, that there is no such a thing as dark matter, and dark energy in the universe. Nobody has ever seen it yet.

But, what is important?

This part of the theoretical cosmological physics has to be understood, by the Keshe Foundation supporters, who become part of the Space Technology. You go beyond the present understanding of the science. You have to go beyond it, that you can understand, the speed of light is the speed of

light in the time and space you travel in.

If you create another gravitational magnetic field, with the same material, you might reach another speed, which is the ultimate speed, in the gravitational field attraction of the light, in that matter state. Could be two, three, ten times faster than the speed of light on Earth. This is the reason why we see the shimmers on the magnetosphere of the black holes. As different matter strength, of the fields, decides to adjust in respect to the field strength of the background and then you see the shimmers.

The shimmers of the gravitational magnetic field, "the Magrav of the black hole" is one of the best clear indication of the existence of an entity as a whole. Like Sun, as much as it gives, it takes. It takes in its transparent condition, compared to the illusion of the black inside.

And, it gives the same, through the dimension of translucent atmosphere around it, what we see as shimmers, its magnetosphere.

In so many ways, as we enter the Space Technology, the true Space Technology of the Universe, not

manmade, with some rocket propulsion, this will play huge game in the dimensions of the space travel. If mankind understands, the creation of the black hole, within the structure of the cores, of the Space Star Formation, then a new dimension, in the dimension of the transportation appears. Where zero time travel, across different dimension of the Universe, become the reality, without interacting and interfering with any object, be it galaxies, a stars, or any other entity.

The creation of these 3-dimensional programs, which are working on holography of the Universe, or 3-dimensional, to show that it is just hologram, and it is no reality to it, opens up a lot, for those who work around the Keshe Foundation programs, and Technology, and the Star Formation. There is an extension, in the field of Unified Field Theory.

The Book No. 8, to be released is only about Magnetic Fields of the Universe. How they are created, how and where is their origin, how they become to create a 2-dimensional effect or 3-dimensional effect and how our body has adapted itself, for lack of understanding, or make it easier not to jam the brain with work of it, to convert everything of a distance to a flat surface.

Today's scientists are using this holography as a way of the same as cheating. What, more or less, Einstein did to us in respect to speed of light. If you think of it, when the Earth is flat, in the eye of the man, on the Moon, then we still have creatures inside, water inside, mine inside, and the whole caboodle of a planet.

Then, there is a fundamental point, in the whole understanding of the structure of the Space and that is, how come that a speck of dust, on the boundary of the Solar System, becomes a planet, and absorbs matters to it? Is there a reality to the term, That there is a black hole inside every planet. That it is to strength that it can create its own dimension and its own magnetosphere.

And furthermore, there is the point, in the dimension of the soul of the man, which replicates the centre of the planet. Do we have a black hole within the structure centre of the brain of the man which, by absorbing from the totality of the Universe, releases some which becomes the manifestation of the physicality of the man? There is nothing but the truth.

In a very short time when the man takes into Space, through magnetic-gravitational field of the Universe, we will learn this. Because it is very hard to do this in the structure of this planet. Because it does not allow you, and second it does not have the field strength for you to be able to test it. For you to be able to examine and see how it is done.

So, what you need, and what we need to learn, from understanding of the black holes, we go back to the paper "The Creation of Black Holes", Black holes not only they absorb, but in absorbing they reflect. Again, as I said, In different dimensions, in different terminology of the physics, we call this in a human body the brain of the man, its magnetosphere. On Earth, we call it, Earth atmosphere and in galaxies and black holes, we call it, the shimmering, one size -dimension of its existence.

The whole world of science changes. When you understand, through the structure of your brain, to the strength of the structure of the brain of the man, man can travel the space of Universe, in no time using the condition of the structure of his own existence through the central brain, or what we call, the soul of the man.

Now, do we need to accept holography, and all that science is throwing in us? Just because from a distance, the body of a man is flat too. When I look at you, from a distance, I see pencil. But, you know, in that there is a heart, there is a lung, and there is a yearning to be. But, what is important for us, is how far man will go to see through this central point, the soul of the man in the centre of the black hole of, and existence of the life of man, where does the emotion sits?

In the human brain, we have found places, this is the emotion of sadness, and whatever. But, where does soul of the man fall into secret?

Then, if you understand the soul of the man is flat too and there is no brain. It hardly creates any atmosphere for itself. Now we understand how far we have to become open minded, to understand the totality and, not when we are in the space, to think, "There is somebody in my head, playing with my head, somebody is talking to me". If you change the strength of the fields of your soul, or the black hole of your soul, then you can hear but not necessarily liking, what you have created.

So, what it comes to us, as human being, is how do we see in the depth of the Space?

How we can collect and connect the totality, 'of the knowledge we have, with the real science of understanding of our own creation? How we are created. And, if we understand how we are created, then we can create any creation. Because, we know how, and where, and what needs to be done to create that condition. Then, it comes to the point of do we need a male and female to have reproduction of the cells and life?

Or, in the dimension of the existence of the Universe in realizing the demise of our lives, that we cannot absorb more from the Universe, to be able to give more, we decide to split, that the interaction of the two keeps the total entity of man. And then, we decide how we share the fields. This is not an easy job! Sooner or later, we have to face it, we have to understand the strength of our soul, we have to understand, how far we can extend the parameter of this soul, that it can hear what is going on, on planet this or that, or you buy yourself something, which could confirm, "Oh, another 20 centimeters of it is better than nothing?"

I hope you all understood.

It is not easy if man chooses to close his eyes and intellect to fallacies of present science. Because you are going to have a hard time in space. You do not see with your own eyes but your soul sees the dimension of existence. You cannot hear anything with your ears, but you communicate and converse with what is in front of you, without actually using any voice.

Then it goes back to what we always say, "How do the babies talk and communicate with each other?" And how the small animals know their ranking, when it comes to feeding? They have no numbers on their back and they are not very good mathematicians with numbers. How do they rank themselves, and they appreciate their ranking?

If you are a farmer and you have a herd of cows, when they come back in for milking, always number nine goes first, before number ten. And, if number ten is taken out, to be done something to, number eleven knows it is its point, it will not touch.

You see one of the most important things, which man will come to understand as he says that "the black holes absorb everything" and, within the centre of the body of the man, there is a black hole, we call it the centre of the brain; then, there is a very fundamental question to ask, "When do we get to play with all?" Or, do we pigeonhole it and ignore a lot of it to fit some of the formulas we want to do? These things cannot be taught and just cross fast to another subject. These things needs to be listened to. This needs to be talked about. It needs a full comprehension of the totality.

And then, it comes back to one thing, if everything in the Universe gets absorbed inside the black hole and, when we look in the depths of the Universe beyond it is black, are we ourselves trapped in a black hole? And then, as they say, the information in a black hole gets all muddled up and on the line of horizon it loses everything, there is no information left.

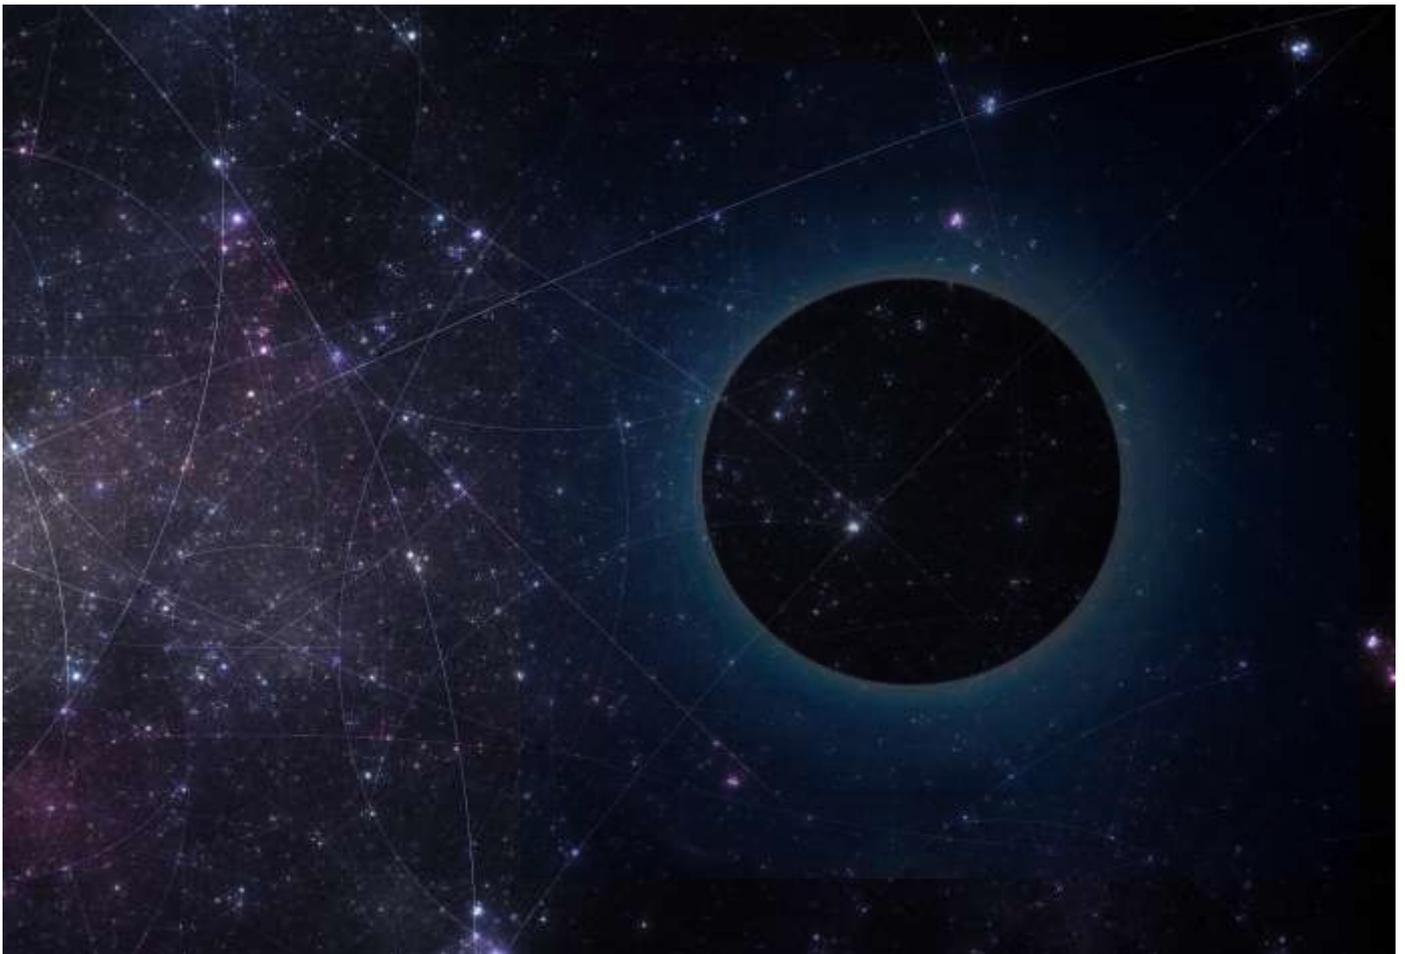

But, does that actually happen?

Do we leave the imprint of the knowledge we gathered, on the surface of the black hole as the theoretical science is talking about? Or, do we carry it with us, within, and then it is part of us? And then, when we come out of this black hole in any shape or form, according to the present scientists, do we carry that knowledge back with us out of the black hole?

Is that black hole the soul of the man, within the centre of it, which is so compact, that it has the full spectrum of the field strength of the Universe, even of the creator.

We have moved into a new direction and new dimensions of teaching. Many things in teaching has to be understood and we try to explain more and more the fundamental bits which has been left out of the science. With it we solve a lot of problems and on the other hand we see how we can add to the knowledge of us collectively, about us, opening the universal community to us that we can work.

In the new science of holography they say there is a flat surface and then it shows everything it is like a mirage. There is something which I did not tell you because I thought maybe some of you go and do

The understanding of the new philosophies, in cosmology, because you have to understand, from the time in 2004, Stephen Hawking confirmed that he has made a mistake, the scientists had to look for something else to spend their money and time on. And they came up with this holographic universe.

We are the passengers of this flat surface and according to what they want us to believe in, there is nothing underneath of us, we are just floating.

As we see, the magnetic field strength as it slows down, it compacts.

some research and do some work and to see how we are back into land of fairy tale, how we are back into a land of assuming, to make assumptions and by those assumptions create another circle of cycle of hypocrisy in the world of science. And if they pay us good enough we can make it, work it, that we can make something out of it.

I do not know if any of you went and looked into the background of holography. They say the reason for it is going to be acceptable because the mathematics adds up. What they mean is when you can build a mathematical structure and the

mathematical equations adds up with what you assume then it is correct. But if many of you who have gone and looked I hope in the depth of the holographic that think the universe is flat, again this is another lie, another deception, another assumption has been made and that is, for the mathematical equations to add up we had to do the reverse of what Einstein did and what many scientists when they cannot get it right make assumptions or they delete it, very much like the $e=mc^2$ that for Einstein to get to that ridiculous equation of the energies called mass times the speed of light by the power of two, he has made a lot of assumptions, he has made a lot of assumptions in quantum, even in quantum mechanics, part of this equation covers first and second law of dynamics and everything else.

What these people did, which a lot of people are not aware of, they made a reverse assumption, and this is ridiculous, this is very nice the way they have done. The people who came up with holography they make one amazing assumption - to be existing. Up to now Einstein and the rest ignored it. They said this does not exist. But what they do, they assume there is something called dark energy which is gravitational field forces, that holds the whole structure together. And for an assumption and especially such a massive calculation to be correct as they assume it, they come up with something very interesting that they say the whole structure of this holographic design of the universe is held together there by gravitational field forces, by energy called the dark energy and it exists.

Up to today no scientific organization with billions of dollars they have put behind it has managed to confirm the existence of dark energy. This is the whole ridiculous thing about it. Up to now people like Einstein they said we assume this does not exist, we assume this is not there, but in holography the way they play the trick is they assume something exists which is opposite to all the conditions that we call dark energy, dark matter in a way if you look at it.

And this dark energy creates that gravitational field force which holds this holographic condition of the universe together. So, now the hand of the magic is opening. And this gravitational wave or these what we call magnetic fields or these gravitational fields

that they assume exist and is there and they call it in a way dark energy is very much in the world of scientific what I call children movies.

Somebody must have watched these things and then he has come up with it. And they use the same process, the same structure, the same lies and cheats as we have seen with Stephen Hawking, as we have seen with Einstein, but this time they repeat the game and they consider that the universe, our universe is full of these things black, dark energy, dark... and has hidden gravitational glue which holds the whole structure of just hologram together. So, those of you who start hearing and understanding what is going on you have to see the hand of the magic.

The magic is something which we do not have and we work this time opposite to understanding of the gravitational field force which exists but we do not see it and all our assumption is that this glue is there. But in so many ways the whole understanding of this dark energy or dark matter, as they call, it has not been found. So, as long as it is not there, I can get us anything I like. Very much as a friend of mine used to say, I can guess anything and I can own anything as much as I can dream about it, does not mean the reality exists. So you have to be aware of this holographic situation which is coming up and they are bringing all sorts of mathematical things behind it spending billions of dollars on it and, in a way, be aware that now the scientific world to make names and new conditions to destruct the physics it has come up with a new trick, now we assume it in, but we do not know where it is.

Up to now Einstein assumed it is not there, it deleted a lot of things, a lot of understanding of the physics and scientific minded people can very easily see this true and you can literally dismiss this theory.

I always say even to my children is, you have children who have a bad understanding of mathematics. They hate mathematics and the worst thing you can do to them is anything to do with maths. My advice to you as parents or if you have got one of those children who listen do exactly what you do with holographic principles and holographic universe as they call it. Go and read about the history of maths and you will find out it is one of

the sweetest things you could have ever done. Then you see where the mistakes are and what do you understand of it and how this mathematics has built up.

There is a program called history of mathematics or history of maths. Let your children read it and listen to it, it is a beautiful thing.

The most complicated equations, integration, differentiation, and everything below and above it, if they understand the history of it, how it was built, how it has come, it allows them not to believe fallacies which the other people are trying to build into it and you will find out your children or if you are somebody who does not like mathematics, you fall in love with maths. Same as physics.

Why scientists in our area of science do not accept this fallacies which we see coming up with these new ideas? Because we understood the physics

understand it. And when you do not understand it, that is the limitation of your comprehension of the science.

Maybe you stay in that position for years until one day it becomes clear and then you move on and then sometimes you stay in that position and you build it to the next step.

So, if you can go in understanding of this mathematics, start from the history. Where did we start going from a line to a square? Why did we start marking the land on a square meter? I see history behind it and then why did we make cubes and then build on reading about the history of maths.

If you read about the history of physics putting anything with it assumption aside, then you see when these fallacies come up how you can overcome it, then you see through it.

WHAT IS REALITY?

from basic. We understand the principle of creation, we understand the operation of the universe. So, no magician can come up. If you look at my teachings for past decade I always give you and I show you and I take you for you to make it, to see it, to

SHOOTING STAR

by Keshe Foundation

I'll explain to you something very simple and somewhat we spoke about this before, a fundamental point.

Some of the knowledge seekers which have been with me and sometime they asked me can you let us see a shooting star?

And I obliged sometimes because I see the clarity of the soul. And sometimes we pass on, because it is another, what we call flash in the pan. But the fundamental question to ask and the fundamental question for you to understand the light of the skies, which in a way can be translated to the light of electron in the interaction with its fields.

Do the people who walk with me and see these shooting stars, do they see it through their own eyes or do they see it through the soul and it translates back itself like a dream to reality of the shooting star? So do they see their wishes in interaction with the wishes and satisfying the

wish, like the dream they had of their mother that it became reality of the morning wake-up call?

They see the light of the shooting star through the soul first as I wish to give to the soul, and then it translates to dimension of physicality and no one else shall ever see, even looking into the same sky.

When you want to see a shooting star, I can create you a shooting star, but only the people who are with me see it. So you ask anybody else, they have never seen one. Or there are people who are with me and their soul is not ready "No, I did not see any". I have tested this. Those who I want them to see the shooting star and anyone standing "Oh, I did not see, I missed it". You did not miss it because the soul was not there to see.

And then the question comes that, how can I create it at the

will and a wish at the moment of request?

There are some people in the panel who have been with me and they have seen. This is to thank them for how they served the foundation, and this is the light of the Creator, not the shooting star in the sky. Then if you can do that, then what is the value of that star?

Is it size of an electron or a neutron or a proton? That in manifestation of the soul, manifests itself as a trail of light in the eye of the beholder in the dimension of physicality.

Then the question comes: have we, do we have or should we redefine the world of science, the world of physics and understanding of the totality of physics?

MY ABU DHABI LECTURE

On the 4th of February 2019, I was invited as a speaker to participate in a 3 day lecture and seminar which was held by Lotus Holistic in Abu Dhabi, the capital of the United Arab Emirates to talk about the science of Alternative Medicine. The first presentation of the first day was dedicated to me.

The main goal for this presentation was to disclose and discuss the scientific validity of the alternative medical techniques and modalities, since the early reaction by medical doctors to alternative medicine is to reject the ideas due to the claim of lack of scientific validity.

As an alternative health care professional, who's been working on different concepts of medicine, in both conventional and complementary fields, I was given the opportunity to elaborate the scientific aspects of alternative medicine to a group of conventional physicians and medical students.

In my philosophy, my definition for health is the state of Balance and not the absence of disease.

I hold a Ph.D degree in Quantum and Integrative medicine and I am a registered ND, a Naturopathic doctor from Canada.

Holistic approach to improve Healthcare

February 4 - 6, 2019

My training in medicine started initially in the mid-1980s in Iran, where I also got a chance to perform my duty to my country as a paramedic in the war (Iran-Iraq War, 1980-1988).

I also have a background in studying dentistry for a few years which I abandoned it later on due to lack of personal interest.

When I got the introductory pamphlet about the speakers that day, I saw that in my brief introduction for the audience, it was mentioned on the first line that I was a student at the Keshe Foundation Spaceship Institute (KF SSI) for plasma physics.

I did not expect to see that sentence there! What was the purpose behind this unexpected action?

Having a degree in Quantum medicine and now a background of plasma physics brought the attention of the audience in my true interest in the subjects of my education in whether I wanted to be a physicist or a physician!

The organizers had chosen that information along with other introductory sentences out of my 12 page resume' (CV) without my consideration and what a blessing it was since it gave me a better common ground to talk more efficiently about the fields of

existence and their impacts on the re-arrangement of functions and the matter state itself.

In Quantum science, it is proven that nothing in creation is random and everything has a purpose for its being.

So I took this opportunity to briefly talk about the new sciences which now enables the scientists (and the physicians) to understand what was previously obscured and unknown to their science and the knowledge of creation and life.

As if somehow, the consciousness was intending for those new people to hear and know more about the new science of creation, the Plasma by the Keshe Foundation.

This was a blessing!
Life has its purpose and every one of us is a complete universal entity with access to all the power of the universe within us, in a way that we cannot even imagine. The key to access this wealth of knowledge and prosperity resides in self-trust.

When we see our individual self as a part of the ongoing stream of life and consciousness, we become the totality of all there is and therefore will have access to all the power of the creation.

The question is how much do we believe in our power? The fact is that now more people know about Keshe Foundation than before!!!

Parviz Rashvand, N.D. Ph.D
Doctor of Naturopathic Medicine
UAE Certified Naturopathic Doctor
Quantum & Integrative Medicine

Education:

- * Current knowledge seeker at the "Keshe Foundation Spaceship Institute" (KFSSI) for Plasma Physics; GANS and Nono Particles in health and medicine
- * 2013-2016: Ph.D. program in Quantum and Integrative Medicine, Hawaii, USA
- * 2002: Doctor of Naturopathic Medicine, the Canadian College of Naturopathic Medicine, Toronto, Ontario, Canada
Registered physician by Canada by the Canadian healthcare authorities
- * 1998: Biology, York University, Toronto, Ontario, Canada
- * 1995: Dentistry program, Kharkov Medical University, Ukraine
- * 1989: Medical university Student, Shahid Beheshti Medical University, Tehran, Iran

History:

Dr Parviz is a Canadian licensed Naturopathic physician in the UAE practicing since 2004. As said, he was the first naturopathic physician and practitioner tested and verified in the UAE. He also was the first doctor and practitioner/ researcher who registered the very first EPFX Quantum Biofeedback system of EPFX in the UAE, so he became a pioneer in Quantum medicine in this part of the world. He achieved his Ph.D in Quantum Medicine later.

- In the health philosophy which he follows,
- * Diseases in general are the result of inability to maintain the free flow of energy (life force) and existence of blockages which can be manifested at the physical, vital, mental and/ or spiritual levels of being and:
 - * Chronic diseases are the result of wrong interpretation by mind to an experience in life. So there is a major component of unresolved mental and emotional factors when it comes to treatment of chronic conditions. Also:
 - * Human body has an innate and natural ability to heal itself, a quality that if compromised, the body would get stuck and could not move forward easily.
 - * Health is the state of balance and not only the absence of diseases.

He is a frequent lecturer and speaker and the subjects of his topics could be very vast depending on the needs of the society.

KESHE PLASMA REACTOR GROUP

by Rick Crammond

Part 1 - The Early Years 2012 - 2014

The Keshe Plasma Reactor Group (KPRG) began as a Skype group that was formed in early 2012, as a common place where knowledge seekers could exchange ideas about building Keshe reactors.

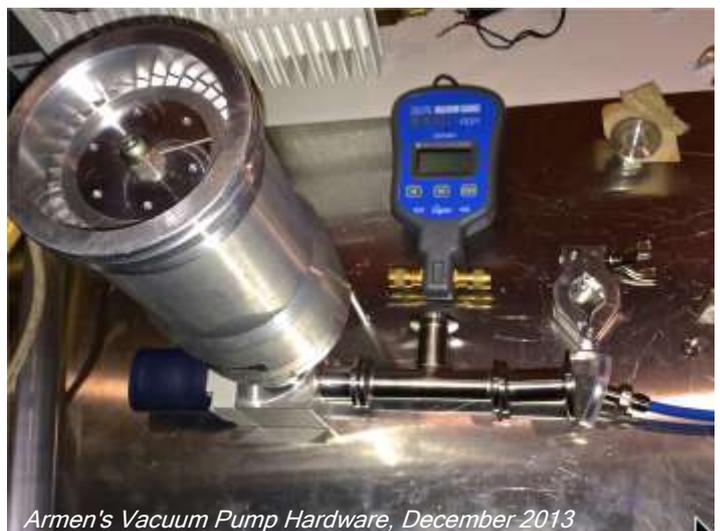

Rick's Pull Start Reactor, October 2013

In the beginning, founding members of the group such as Armen, Vince, Sandor, and myself (Rick), focused on the various types of reactor systems as found in the Keshe patents and video presentations. At first, the information was limited about the building of reactors, and we were left to our own ideas how to go about it.

We discussed the theory at length, and then began sharing pictures and videos of our setups. This got the attention of Mr. Keshe, who began to appear in the KPRG

group. Under his guidance, we learned many details about creating a plasma condition inside a rotating spherical reactor and under a high vacuum condition. Guy joined the KPRG group also in 2012 and quickly became a regular local participant. He became the main lab technician, helping me with experiments...and creating lots of his own! There is an interesting story about the "coincidence" of meeting Guy and inviting him to the KPRG group...

I had gone to a cafe in the town close to where I live. I don't normally go to that cafe, but I was to meet with a friend who lived there. I was sitting with my friend, and we were discussing free energy and similar topics, when I mentioned Mr. Keshe and the Keshe Foundation to him. That name perked up the person sitting next to us (Guy) who immediately said, "Did you say Keshe? Of the Keshe Foundation?" I said "Yes!" with incredible disbelief that anyone in that town, or even this side of the country, would know the Keshe name. But sure enough, Guy, through his research online, had discovered the Keshe connection! We had a great conversation and I invited Guy to come to the KPRG meeting. Our chance meeting began a great friendship!

Armen's Vacuum Pump Hardware, December 2013

Many thanks to Guy for his work and inspiration, and for being there for all the weeks that have now become years!

Geert's Reactor Setup, November 2013

Through 2012, Mr. Keshe continued to give us pieces of the picture and by October 2012, Geert, Ludmil, Armen, and others were adding gases to their reactors, and even learning special Nano-coating techniques for the walls of the reactors. The idea (as based on the Keshe patents) was to add special gases such as hydrogen, helium, argon, neon to the reactor, and under rotation the gases would form separate layers according to their weight. Then, once the central plasma is initiated, each layer of gas forms a function and becomes part of the field conversion process to produce power, or lift forces, or other effects. Easier said than done, as we discovered.

Some of us were trying high voltage in a vacuum condition in 2013 and 2014, and getting some unusual effects. (For example, see my picture of the double-layered plasma formation known as Faraday Discs inside the vacuum chamber.)

One of the first videos done with Rick, Guy and Paul, shows the behaviour of a HV plasma and electric circuit in a vacuum environment (Vacuum created by Paul using a hand vacuum pump!) "Mystery Of The Plasma Ball In A Vacuum" Feb 24 2013 <https://youtu.be/DDxUP76RDWE>

Rotating Plasma Ball experiments: "Magnetic Drive Plasma Ball"

<https://youtu.be/wFIsTJG4LU8>

The now-famous "Spinning Plasma Ball Experiment"

https://youtu.be/Wis_HEa3X84

Sometimes our simple experiments can show profound principles. It is interesting that the "Spinning Plasma Ball Experiment" was re-visited in February of 2018 by Dutch of YouTube channel Dutchsinse, in a video called, "2/10/2018 -- Core of the Earth Mystery Solved? New experiment may change the geoscience world", found here: <https://youtu.be/n5kJdVaMPJw>

Plasma Chamber and Vacuum Pump, March 2014

Armen, Ludmil, myself and a few others continued with voltage gradients to create rotating fields and other effects, as we can see in Armen's video of October 2013:

<https://www.youtube.com/watch?v=MrtsctLJITQ>

However, Mr. Keshe told us during the early times, that he does not use high voltage in his reactors...and reminded us that a plasma ball is just an activation of the matter-level electrons, and is not "real plasma"! In early 2013 Mr. Keshe suggested we start public teaching workshops with him, based on the KPRG model of open and live interaction with knowledge seekers who share their experience from labs all around the world.

Accordingly, on March 5th of 2013, the 1st Keshe Public Teaching Workshop was broadcast live on Skype and JustinTV, direct from Rick's lab in Canada with Guy and Paul locally, and Mr. Keshe and a few others online (<https://youtu.be/49dgEw2J8ks>)

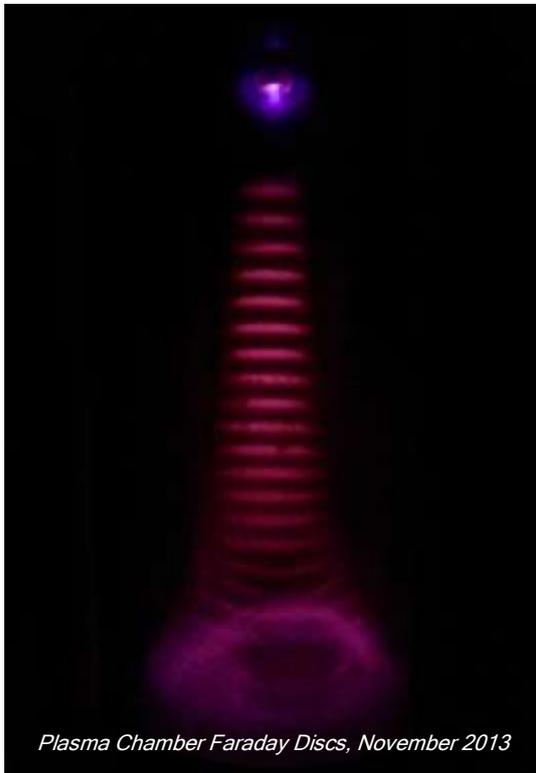

Ping-Pong Ball Reactors, December 2014

In the meeting, Rick makes a comparison of a Plasma Ball to the Keshe patent drawing:

<https://youtu.be/49dgEw2J8ks?t=1194>

So began a series of 10 Public Teaching Workshops, that were broadcast every month or so, with the last one ending in February, 2014. The Public Teaching Workshops YouTube video Playlist is here: https://www.youtube.com/playlist?list=PLpCKWzA-bp9tzZsrkQ4K1ETPt2Y_aZhAz

2014 was a busy year of changes with many more public teachings. In 2014 some of the members of the KPRG went to Italy as part of the first 10 Knowledge Seekers working in the lab with Mr. Keshe there. Armen in particular, learned a lot during that time and was a great connection for those of us in the KPRG group. Thanks to Armen for his hard work and sharing! By 2015, Guy, Vince and I journeyed together to Italy to help inaugurate the KFSSI educational facility and lab there.

The Keshe Plasma Reactor Group continued to meet every week throughout 2014 and 2015, and it still does today. There have been many changes in the KPRG group over the years...some older members have dropped away, and new members have joined in. The emphasis has changed. Now, we may focus less on the actual physicality reactors, but I think we are learning more about creating the universal conditions and the field strength to survive...anywhere in the Universe!

More highlights and stories next month, as we continue to look at the history of the Keshe Plasma Reactor Group!

GLOBAL UNIVERSITY TEACHING

by KF SSI EDUCATION

Based on:

260th Knowledge Seekers Workshop, 01:38:18

<https://youtu.be/eMfXjjLNYg?t=5898>

264th Knowledge Seekers Workshop, 01:40:45

<https://youtu.be/hmISPSDhFzE?t=6046>

The whole structure of the new teachers of the Keshe Foundation, the whole teaching, which goes in the background in KF SSI Education, is now going into universities, and around the world. We see many publications, coming out in publications, in journals, carrying the name of Keshe Foundation underneath of it. We are quoted for our correctness. We are quoted, for delivering a new knowledge and, it is in the hand of our teachers to understand themselves, before they teach.

We are entering a massive teaching ground. We have to be correct. If it does not happen, then ask yourself: Why?

Do not mix thermodynamics with the others. We see people coming up, we have mixed Tesla, Sears, and Keshe to build something. "Tesla, I accept, but Tesla is in the matter state. Sears, he understood a little bit, but still in a matter state. We are in the plasma state. When you explain the beautiful work of Tesla, understand Tesla worked in a matter state condition. Do not mix it, with what you learned as a dynamic plasma, with no dimension, in the world of Keshe Foundation."

Teach your students the same.

Spend the first hours explaining the difference between Tesla's work, the Keshe Foundation work, then the lies of Newton and the thieving of Stephen Hawking. You have to understand, how the structure works. You have to understand yourself to be able to pass the knowledge.

Why do you get a Nano-layer? What is the function of a Nano-layer? Is it just the fields or itself is an entity, which can maneuver to accommodate? Then, you have to understand, inside these layers, there is interaction, there is life, there is repetition of energy absorption. The theoretical plasma physics, the theoretical plasma which leads to the creation of life in the Universe, has to be understood in essence.

In Book No. 8 I write, and somewhere in it, if you are wise enough, in the book will be written, if you read from beginning to the end, somewhere there is 100 names of the Creator. Which is us, the beauty of our own soul. But, 99 is written, the 100th is, 'the totality,' of the total 99, which makes you the creator. In the science of plasma, when you start teaching in a new cycle, try to make clear with your students, especially in KF SSI Education, especially in the universities, which now we start teaching, training the

teachers, to teach the students, to teach their students of the future. Clarify the state of the matter, in the eye of the man, the state of plasma in the work of the Universe; understanding how you go from one to the other, you come from one, back to where you started, or where you want to go to.

It is for the first time, in the cycle of the understanding of man, that we have managed to go from matter to energy, and from energy back to matter. You start with a copper, you put it back in as a GANS, and with the interaction of the GANS, you make gold. It is transmutation of the fields of the Universe, not matter state of the Universe. Because matter state you considered as matter, but it is still in fact, another dimension of the plasma in a more compact state. Matter state, in reality, is a mirage, it does not exist.

In so many ways this is a message to the team, which is setting up the university courses. As you are endeavoring to start teaching the professors in universities in coming weeks, or the new universities. **“Do not teach them Nano-coating, teach them what I taught today first.”** Build the knowledge, that they understand the understanding of the totality, not half-way that you have to add to it and then you lose your position and prestige as a teacher.

The teams which are going into translating the knowledge into virtual teachings for the governments in the coming weeks, this is a message to you and to the University graduation group, study groups, which are setting up the syllabus for the governmental organizations. Let us start teaching correct from the base, and this is the base.

Let us question our own questions that we can answer in truth not to fabricate, then we have to cover a lot of, and we have to pay a lot of shirts as Mr. Stephen Hawking had to do. When he was caught with his lies, he had to pay with the shirt.

And, as we know, the last words of Einstein was the biggest mistake he made. He advised the president, because in fact it was not his last threat, he never understood anything about the physics, would have never advised the presidents to use a new nuclear, atomic bomb. Because, he was just a mathematician?

No! He was just a bookkeeper.

What we understand is that we have to become aware. In the next few weeks, we build up to the time, as our new teachers go into universities, to teach the teachers to become in September the teachers of the universities and, in other dimensions, our own teachers. “I try to cover more of the theoretical physics. Unfortunately, I do not have much time to sit down and write. But, it is time for you to write, what I teach. And then, as it is manuscripted, to be able to be reached.”

Then one fundamental question again for us is: can we become realistic and understand the totality of the world of science and physics? Because with it, in understanding world of plasma, would build a new science on the correct way, that our future generations can travel the spans of universe, as they can drink a glass of water.

The world of science should stand on the strength of the science!
- M.T. Keshe

PLASMA KNEE PAD

/ CE Certified Medical Device Class I

Plasma Knee Pad is designed using Plasmatechnology, based on the interaction of magnetic-gravitational fields. The Plasma Knee Pad emits fields of plasma that penetrate up to 3 cm under the skin, helping to bring the body back into balance. With its ergonomic design, which adapts to the knee like a second skin, you can now enjoy comfort and well-being very quickly. Equipped with elastics adjustment bands they adapt the neoprene to perfectly contours your knee.

The Plasma Knee Pad has no moving parts or batteries, so it is lightweight, durable, easy to wear and quick to remove.

BRING FREEDOM TO YOUR MOVEMENT!

The Plasma Knee Pad can be used to:

- Reduce acute and chronic muscle pain, tendinitis
- Improve blood circulation.
- Increase the vitality of cells and tissues.
- Reduce compression syndromes.
- Relieving pain in chronic meniscopathies.
- Reduce the symptoms of sprains and strains.
- Reduce pain in the knees.
- Offers support to the knee during various activities.

UTILIZATION INSTRUCTIONS

Apply to the knee for 2 to 6 hours for a maximum of 1-2 times a day.

Available on:

store.keshefoundation.org/store

Precautions:

- 1) Keep away from metals.
- 2) Keep away from electromagnetic sources (radio, TV, mobile phones, PC, etc.).
- 3) Do not apply:
 - to the neurological part of the skull (brain)
 - to internal organs
 - where there are infections
 - to patients with high fever
 - to open wounds
 - to pregnant or lactating women
 - near metals or electrical implants / devices (even inside the body such as metal implants)
 - to pacemaker wearers.

EVERYTHING IS INTERACTION, EVERYTHING IS ENERGY!

ITALIAN

Greetings to all from **Ivo** Armellini and **Lara** Parzian

We are researchers, passionate about the technology transmitted by Mehran Keshe, for years now.

This technology has changed our lives and through this new vision of life and ourselves we have grown in social relationships and above all in our relationship with ourselves, in the depths of ourselves. We started a great and true friendship that allowed us to work and experiment with Keshe technology together.

We experimented on ourselves, with plants and helped relatives and friends with their physical problems at the beginning. Our understanding of plasma has enabled us to have more understanding of love. We like to think that it is thanks to Mr. Keshe's technology that we fell in love.

Everything is interaction, everything is energy! Matter is energy and energy manifests itself in creation through an interaction.

This understanding pushed us to start the dissemination of Mr. Keshe's technology between relatives and friends but quickly the group has expanded and now we find ourselves with various groups in various cities.

Now, besides divulging technology, we are also the first physical store in the world. The energy of the plasma that exists in every atom of our body, in every emotion, in every energetic aspect of our life, always goes to interact with this technology and changes permanently our physical body and our deepest psychological part.

A very useful observation to all is like for example the animals are much more reactive to the energy of the plasma, why? They are sincere and loving souls, and this must make us reflect, we should

become sincere and loving, souls more open to love. The most powerful energy within plasma is the energy of love. The plasma of each atom contains the most powerful energy in the Universe and is Love, conscious Love, and conscious. So when we experience negative emotions, we are blocking creation and we are destroying instead of creating.

For this reason Mehran Keshe proposes to sign the Universal Peace Treaty by inviting a greater openness within us, knowing how to become more loving and sincere beings with ourselves and with all the races of the Universe, because this is the energy engine to develop this technology!

Plasmatic Periodic Table of Elements - A new understanding of atomic structures

Introduction

We need a new understanding of atomic structures based on an analysis of plasma Mr. Keshe said, "In a plasma we don't see an electron". "Periodic table goes with physics not the science of plasma". "A plasmatic condition which is the work of the universe"; "throws the whole periodic table into turmoil". "Because it has numbers of electrons, protons and neutrons and we don't have that" [1].

This paper presents a method to map energy signatures, measure relative energy levels and mass levels, plot positioning and measure the gradient flow and direction of any plasma or plasma interaction.

This presentation draws from the 56th KSW [2], 60th KSW [3] and 7th Health workshops [1] as the principal concepts but also from all of the public and private teachings available in an attempt to correlate the information from the teachings of Mr. Keshe. Mr. Keshe said, "in the universe there is only one structure" [4].

Analysis of a Plasma

Mr. Keshe in one of the KIDS workshops said, "plasma is a fancy word for Magrav fields in a container. The trick is to know how to open the container, use the fields and put them back in the container when you are done. To understand this, we can look at the structure of a plasma. Mr. Keshe in [5] said, "the gravitational magnetic field of a plasma divides into 12 segments.

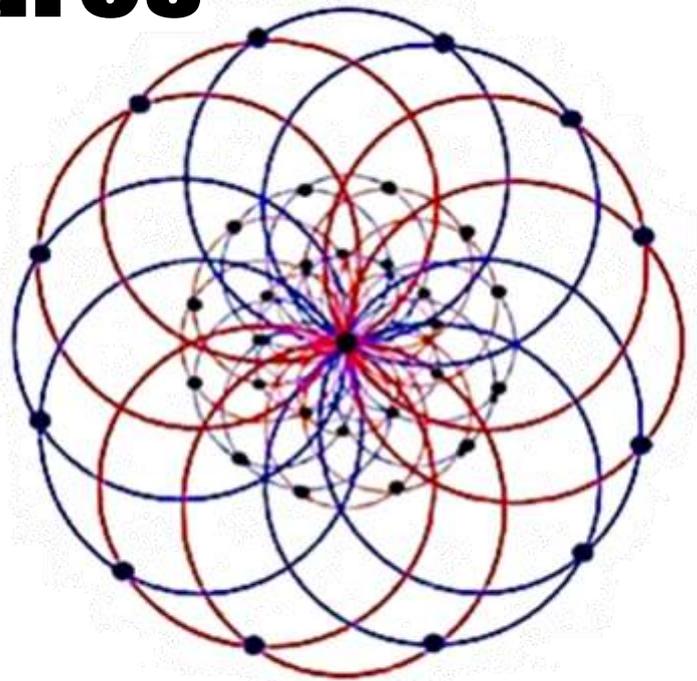

Figure 1. Structure of a Plasma Field - 12 field lines in multiple layers of field interactions.

There is a potentially infinite number of layers that will continue repeating the same pattern. The ratios of the position of each layer relative to the central core and to each other, remain constant at every level. These ratios have correlations that have been measured numerous ways. The Fibonacci sequence, golden ratio, coulomb barrier ratio, harmonic overtone series ratio and more, are different ways of measuring the positioning of the layers of a plasma.

Each black dot represents the position where two field lines cross. These positions Mr. Keshe described as "water from a shower head going into a drain on the floor of the shower" [2]. The black dots represent "drains" in the floor.

The position of the black dots represents “drains or portholes”. The container is the energy splashing back into the environment, or “drilling a hole in a piece of wood” and “sawdust” that sprays back. In Figure 2 where the field lines radiating out from the centre cross, the “sawdust” generated, create miniature versions of the totality. Figure 2 shows the “sawdust” at the third layer however; each layer has its own layer of “sawdust” not represented in this figure. The figures are fractal geometric patterns. If you understand the structure at one level (micro) you understand it at any level (macro).

If we look at this layered structure, we can see a central core in the center (or the egg yolk), a transition (or the egg white) and a layer of more dense energy due to the “sawdust” (or the egg shell). A plasma has multiple layers and is an egg inside an egg inside an egg etc.

Energy Packages

Plasmas are energy packages. Energy in this work is defined as two types of motion;

1. Expansion and contraction of the diameter of the fields, or “heartbeats” measured in comparative frequencies and diameters.
2. Flow of “rivers of energy” measured in comparative gradient flow and mass rates.

These types of motion help define a plasma field strength based on “comparative energy levels” and can only be measured as “ratios”. Therefore, we can measure the relative differential of any plasma or interaction of plasmas, but not the absolute value.

Heartbeat

Every layer of a plasma has a diameter that expands and contracts at a more or less constant rate. Each layer is positioned relative to the central core (radius) depending on its heartbeat rate. The relatively slowest beat rate will be positioned at the outermost layer and the fastest at the center. The energy levels are based on relative beat rates and diameters according to the ratios 1/1, 2/1, 3/1, 4/1, 5/1, 6/1 etc.

The 1/1 ratio represents the slowest beat rate and is the layer with the largest diameter. Each successive layer has a comparatively faster beat rate

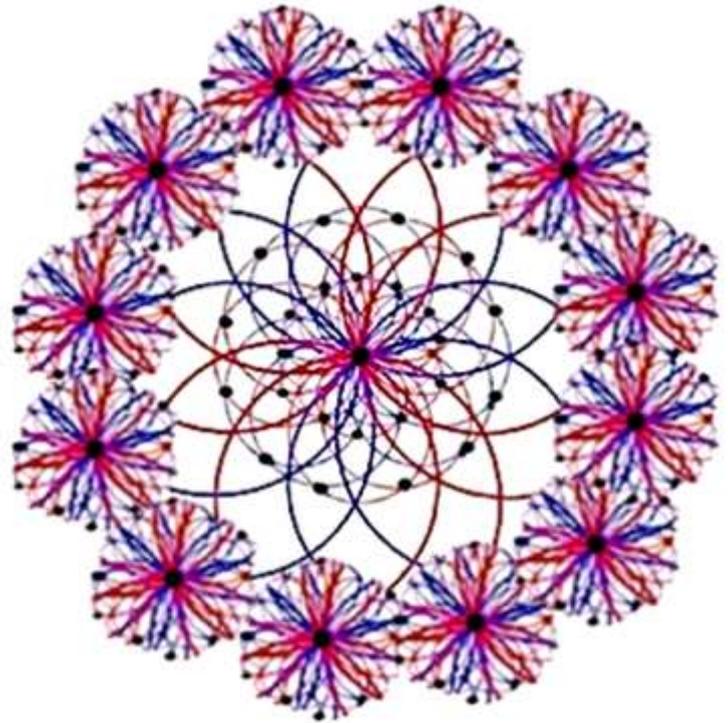

Figure 2. Fields Within a Container. This shows a layer of energy containing the fields inside.

and smaller diameter position based on the ratios. We can compare any layer to any other layer using the ratios two to three, two to four, two to five, three to four, three to five etc.

To recap what we have shown, rivers of energy interact, create “portholes” that leave a remnant equal to the difference of the fields going in and out of each portal. The remnants then form into plasmas with multiple layers, each having a heartbeat, or a heartbeat inside a heartbeat inside a heartbeat etc. Plasmas can be seen as multiple core reactors, with a spectrum of energy levels that can be measured comparing beat rates of one layer to another.

Gradient

We can use the heartbeat rates to measure the energy levels and positions of each layer relative to the central core, and to each other. Gradient flow is the relative flow rate of the “rivers of energy” that create and connect each layer to each other layer and to the central core. The direction of flow can be compared to arteries and veins. Arteries flow out of the heart and veins flow in. A plasma is a heart in a heart in a heart, so the flow direction is from the inside out. However, there is always a two-way flow. As the difference between any two layers increases the flow rate increases.

For example, the ratio between layer two and layer eight is $2/8$. This means layer two is beating two times every time layer eight beats eight times, and the diameter of layer eight is one-fourth that of layer two ($2/8 = 1/4$). The gradient between layers two and eight is one time slower than eight to one and four times faster than two to one.

Heartbeat rates measure energy values. Diameter rates measure the relative amount of space a plasma takes up. Gradients measure flow rate and direction of the arteries and veins or “rivers of energy” that interact creating and connecting the multiple layers of a plasma.

Fourier Spectral Analysis

A Fourier spectral analysis is a graphic representation of the position of the layers of a plasma based on beat rates measured in relative frequencies, and diameters measured in relative amplitude.

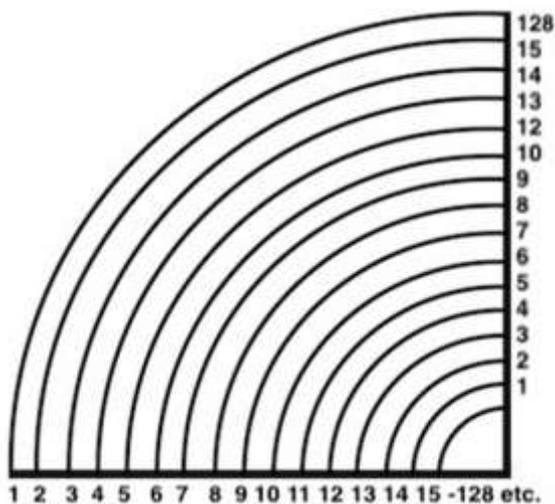

Figure 3. Fourier Spectral Analysis.

A Fourier spectral analysis shows the relative beat rates measured in frequencies (horizontal) and the relative diameters measured in amplitudes (vertical) of the layers in a plasma. It is important to remember that all measurements are relative values not absolute values. In Figure 3, measuring from the outside in, the first layer's frequency is X times 1. The second layer's frequency is X times 2, or a two to one ratio and so on. X times 1 is the fundamental frequency or the slowest relative frequency with the largest diameter. In this way we can measure the cascading of the layers as the structure expands and contracts.

Mass

In this paper “Mass” is defined as: Mass is the amount of plasmatic material that manifests in an environment. The mass of any entity is equal to the difference of the fields interacting at a given position (the “sawdust”). As an entity manifests, each layer within its structure uses a portion of the total mass. The relative mass of each layer corresponds to that layer's relative position and heartbeat rate. We can measure the relative mass of each layer using the same ratios as the relative heartbeat, diameter and gradient flow rates.

Mass Scale

In the macro, all universes exist as the interaction of field lines (“rivers of energy”) within the structure of the Unicos. The masses of each universe are equal to the difference of the field lines interacting (“sawdust”).

The relative mass of each universe is relative to the interaction unique to its position. There can be universes with relatively large masses and some with relatively small masses but none with a mass equal to or greater to that of the Unicos. There is a distinct mass differential between the mass of any given universe and the mass of the Unicos.

In turn every universe is divided into galaxies. Galaxies can have relatively large or small masses but never equal to or greater than the universe they are a part of. And so, it goes with solar system mass levels, planetary mass levels, molecular mass levels, atomic mass levels etc. These are distinct divisions inherit within the structure of a plasma.

Field Strength

Each plasma or “energy package” is a multiple layered structure with cascading layers expanding and contracting. This cascading effect can be measured with simple ratios as described. We now have a mechanism to measure relative values for at least four parameters of any plasma; frequency (heartbeat rate), amplitude (diameter), gradient flow (flow rate) and mass (sawdust). These four parameters make up a plasma field strength.

Plasmas at the Atomic Level

The field strength of all elements has a mass on the atomic level. Atoms can have relatively larger or smaller masses, but no atom can have a mass equal to or greater than the molecule it is a part of. Atoms are plasmas that exist due to the interaction of the fields within the structure of a molecule. The atoms in turn make up the structure of the molecule. Hydrogen exists due to the interaction of the fields within the structure of the amino acid molecule. Amino acid molecules exist due to the interaction of the fields of the planet, and so on.

Molecules

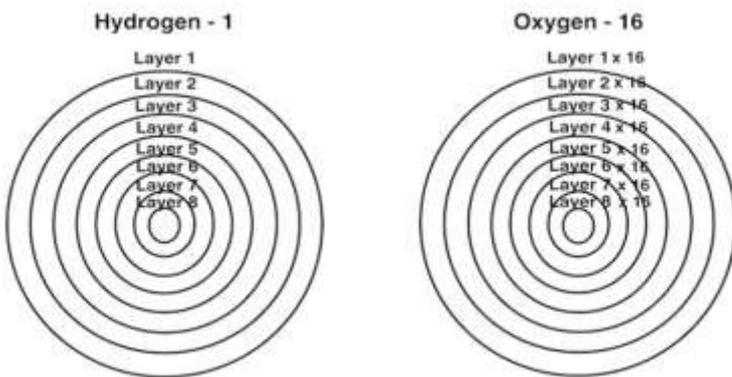

Figure 4. Comparison of Hydrogen and Oxygen.

In order to understand atomic level plasmas, we must analyze the molecular level plasmas the atoms are a part of. The amino acid molecule is Hydrogen, Carbon, Nitrogen and Oxygen. The atomic numbers associated with each element can be used as measurement values or ratios compared to Hydrogen as the bass line or a fundamental energy level (1/1). We can analyze the interaction of each atom to each other atom, then how they interact collectively. Hydrogen is 1/1, Carbon is 12/1, Nitrogen is 14/1 and Oxygen is 16/1. Carbon to Nitrogen is 12/14. Carbon to Oxygen is 12/16.

Oxygen's energy level as compared with Hydrogen is 16/1 or more or less equal to the field strength of Hydrogens sixteenth layer. The second layer

of Oxygen is more or less "in tune" with Hydrogens thirty-second layer. The third layer of Oxygen is in tune with Hydrogens forty-eighth layer etc.

Only the Layers that Hydrogen and Oxygen have in common link.

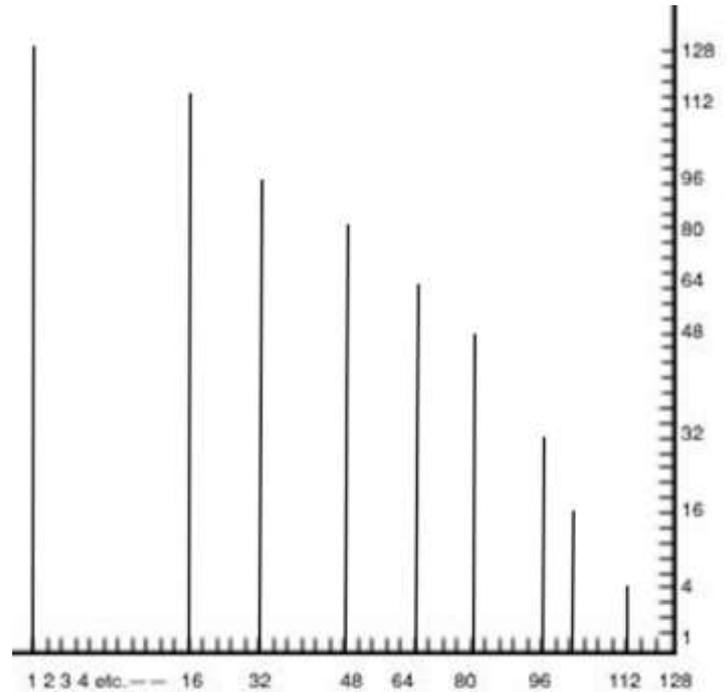

Figure 6. Frequencies of Layers Linking Hydrogen and Oxygen.

We can repeat this process comparing Hydrogen to Nitrogen (14/1, 28/1, 42/1, 56/1, etc.) and Hydrogen to Carbon (12/1, 24/1, 36/1, 48/1 etc.). We can also compare Carbon to Nitrogen, Carbon to Oxygen and Nitrogen to Oxygen.

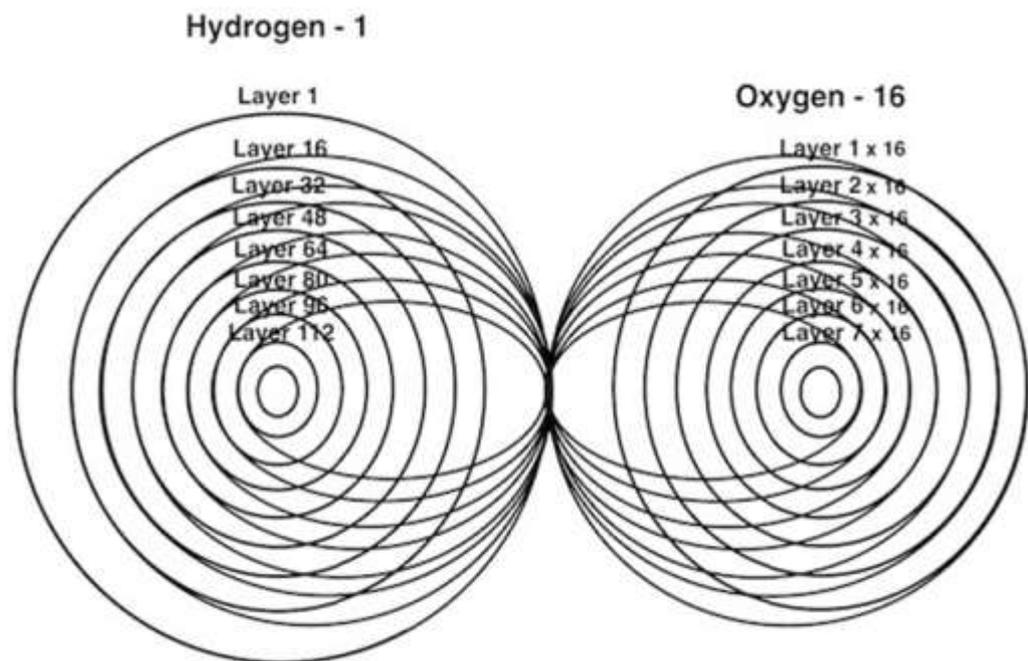

Figure 5. Layers Linking Hydrogen to Oxygen.

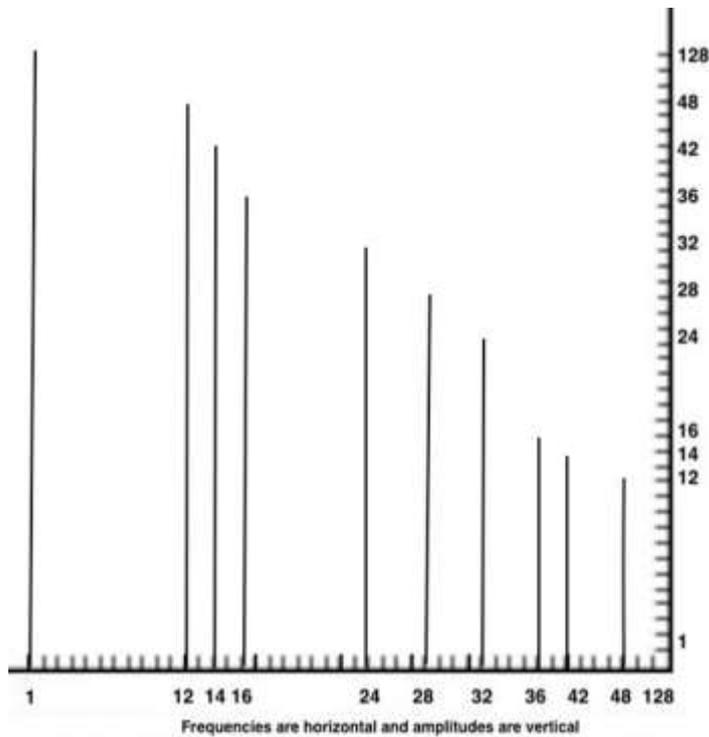

Figure 7. Partial Spectral Analysis of an Amino Acid.

Figure 7 is a partial view of the energy signature of an amino acid molecule. The numerical values are spikes in amplitude due to the interaction of the layers that Carbon, Nitrogen and Oxygen have in common with Hydrogen. The numbers 12, 14 and 16 represent the fundamental or first layers of C, N and O respectively; 24, 28 and 32 represent the second layer interactions or 2/1 ratios; 36, 42 and 48 represent the 3/1 ratios or the third layer interactions. The interactions continue but are not visible in this Figure. This Figure does not show the interaction of common layers between N and C, N and O and C and O. But they can be measured in the same way and are part of the overall field strength of the amino acid molecule.

Measuring the Elements of the Periodic Table

Hydrogen, Carbon, Nitrogen and Oxygen exist due to the interaction of the fields within the structure of the amino acid molecule. Every atom on the periodic table exists due to the interaction of the fields within the structure of the amino acid molecule and can be measured using Hydrogen as a bass line or fundamental energy level.

Hydrogen is 1/1. Deuterium is 2/1, Tritium is 3/1, Helium is 4/1, Oxygen is 16/1 and Iron is 56/1. This Figure shows only the first layer of each element not the interactions of all the layers which

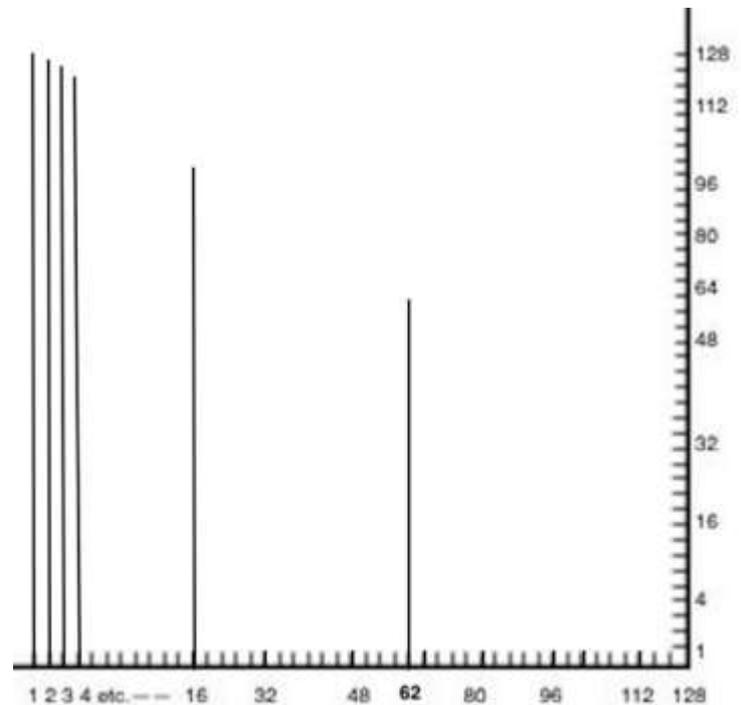

Figure 8. Spectrum of Some Elements.

would appear in an actual spectral analysis. We can measure the interaction of any element to any other element, layer by layer following the procedures shown.

The behavior of any two or more plasmas will be determined by how many, and which layers connect. If many layers link, there will be a different behavior than with a fewer layers linking. If there are the same number of, but different layers linking, there will be a different behavior. Figure 9 represents a molecule with two atoms. The two atoms are represented by blue and green circles. Layers that have similar beat frequencies will generate rivers of energy that extend beyond their respective containers to link at a balanced position between them. The energy rivers pour into the center like water into a drain. The backplash is the molecule represented by the brown circles.

The backplash is the vortex generated from the center extending to the outer ring. The brown circles represent the molecule generated by the interaction of the layers of the two atoms linking at the center. The number of layers and which layers link determines the layer structure or energy signature of that molecule.

A molecule has an energy signature determined by the interaction of atoms linking at a balanced position within its structure. Each atom is positioned based on its respective beat frequency relative to the molecule's central core. Atoms are part of the

molecule, generated from that molecule. Hydrogen, Carbon, Nitrogen and Oxygen are created by the interaction of the fields within the amino acid molecule they are a part of.

The position of the layers, or energy signature, of an amino acid molecule is determined by the interaction of similar layers between each element linking at a balanced position or a central core. We can map energy signatures, measure relative energy levels, positioning, gradient flows and direc-

tions, and mass levels using the methods described.

Conclusion

A plasmatic condition which is the work of the universe; “throws the whole periodic table into turmoil. (...) Because it has numbers of electrons, protons and neutrons and we don’t have that” [6]. With a new understanding of plasma, the elements of the periodic table can be measured as energy packages with relative energy levels.

brain-damage

Subject

This paper documents a solution for brain damage, as applied to a car accident survivor whom, with a severe brain damage, went into coma. The application procedure was two-fold. It involved administering some mineral supplements and externally applying GANS plasma water (also called Liquid Plasma or LP in this article) by wearing a specially prepared plasma helmet.

Method

The following supplements are to be given orally or intravenously, depending on the condition of the patient.

- Omega 3 - 1000 ml/mg a day,
- Folic acid - 10 mg per day* (normal dose),
- Potassium - 400 ml/mg per day (normal dose),
- Calcium - 500 ml/mg per day* (normal dose),
- Magnesium - 500 ml/mg per day*, (normal dose)
- Zinc - 42 ml/mg per day* (normal dose).

* THE FIRST TWO DAYS DOUBLE DOSAGE, IF THE SUBJECT'S RESPONSE IS GOOD TO EXTEND TO A WEEK OR MORE

What creates the brain is the skull, so a correct amount of calcium is needed. When there is a brain damage, the body or some limbs contract and therefore it is necessary to introduce two elements: Potassium and Magnesium. Magnesium is essential for the brain and nervous system, as well as having different functions for each area of the first. Magnesium is important for the nervous system as it allows the correct flow of electrical energy within it.

Potassium, on the other hand, transfers the command from the brain to the muscles and regulates its contraction; combined with sodium creates the

neuronal electrical conductivity. Omega 3 instead, favors the reproduction of brain cells, while the folic acid allows higher information processing speed and better memory capacity through splitting and therefore the multiplication increases even more. Zinc is essential in the formation of neurons.

In the first two days double the dosage, if the subject's response is good, extend to a week or more. Calcium, magnesium and zinc need to be mixed in equal parts before administering e.g. one capsule of each. With potassium, if the subject starts to have diarrhea, halve the dosage [1].

It is therefore necessary to work on two lines: one of matter, where we need to give the physical constituent elements to create the matter quickly, and the other plasmatic, to create the connection with the neuronal system (CO₂) and the creation of the brain with the regulation of emotions (ZnO Liquid Plasma) [2].

Plasma Helmet

Plasma water's equivalent to 1000 gr brain weight (2% of 50 kg body weight) needs to be prepared.

- 75% of water = 750ml LP CO₂ + ZnO,
- 1000ml - 750ml LP = 250ml GaNS:
- 60% White brain matter (axons) GaNS = connections = 150ml CO₂
- 40% Gray brain matter (neurons) GaNS = brain nerve part = 100ml ZnO
- + extra 100ml of CH₃ LP [3].

The above GaNSes and Liquid Plasmas were made into pillows to line the inside and outside of the helmet (Fig. 1), with:

- 1 small pillow for temporal lobe - right part (795ml),
- 1 small pillow for temporal lobe - left part (795ml),
- 1 small pillow for parietal lobes right and left part (795ml), as the central part needs to be well covered,

Figure 1. Parts constituting the helmet.

- 1 small pillow for occipital lobe (795ml),
- 1 smallest pillow for frontal lobe 405ml [4].

Such pillows (Fig. 2) are prepared with the following proportions of the GaNSes and LP:

- Small pillows (795ml):
- 600ml LP of CO₂ + ZnO,
- 60ml LP of CH₃,
- 80ml GaNS of CO₂ (PH 10.06 Mv +96),
- 55ml GaNS of ZnO (PH 6.34 Mv -230) [5].

Pillow for frontal lobe (405ml)*:

- 300 ml liquid plasma CO+ZnO,
- 40 ml liquid plasma CH₃,
- 40 ml gans CO₂ (Ph 10.06 and +96 mV for GaNS),
- 25 ml gans ZncO (Ph 6.34 and -230 mV for GaNS).

Note: It is important that all of the brain is covered by this material without spacing and with direct contact to the scalp [6].

The exact amounts of LP and GaNS in each pillow differ slightly from the initial calculations, because the brain is contained inside the skull. Having to do the pillows around, it was necessary to adjust the volumes to ensure a complete coverage, proportional to each part of the brain.

The outer sphere is always larger than the internal

sphere, however the magnetical-gravitational proportions are respected here.

GANS Preparation

Figure 2. Five small pillows of the helmet.

In the first place, we need to reproduce the same conditions during the creation of the GaNS, just like when the human brain was created [7]. Therefore, the ZnO GaNS used in this application was produced, replicating the conditions of the creation of life on this planet. In the GaNS making process, factors such as: temperature, wind and varying electricity current (replicates the 'tides' of solar magnetism) were considered and applied - as depicted in Fig. 3. Detailed rationale for and description of the GaNS making procedures, can be found in [8].

Figure 3. Setup for producing the brain-ZnO GaNS.

Application

The plasma helmet was applied (Fig. 4) for the period of 4 months and the mineral supplements were administered for 10 months. From the very first days, the results of this application were noticeable and are described below in further detail.

First day - 26/09/2016

- From 22.00 to 00.00 = 2 hours application
- From 00.00 to 4.30 = break
- From 4.30 to 5.30 = application
- From 21.30 to 2.30 = 5 hours application [9].

Effects:

- Deep sleep,
- Heart rate dropped from 120 to 100 per minute,
- Muscular deconstruction (especially of the neck),
- Total reduction of any movement [10].

Second day - 27/09/2016

From 21:30 to 2:30 = 5 hours

Effects:

- Same previous effects with a further reduction in heart rate below 90 beats per minute,
- N.B. used two GaNS mattresses (one above the basin and the other below),
- Slept until late morning [11].

Results

Apart from lowering of the heart rate, reduction in involuntary movement and muscular deconstruction, changes were also observed in the MRI scan of the brain. Fig. 5 depicts a healthy human brain for comparison with the MRIs of the brain of the subject in Fig. 6.

The summary of the analysis of the brain MRI scan in Fig. 6 (left) highlights the severe cranial traumas with widespread 3rd grade axonal injury, post traumatic ESA, emoventricular and multiple contus outbreaks.

Figure 4. Application of the helmet.

Figure 5. Healthy human brain (for comparison).

Further MRI Details:

- Ventricular system in non-dilated axis, with blood level in the left occipital horn.
- False-bruising focuses are observed:
 - * Right temporal seat (multiple);
 - * Right frontal;
 - * In frontal left.
- Subarachnoid blood in the hemispherical hemisphere in frontal and right temporal front, left frontal.
- Outbreak fracture in the retractorial site, to the right.
- Serious contusion-hemorrhagic lesions of the splenic body of the callous body.
- Other similar injuries are observed in the sub-cortical, numerous and bilateral, as well as in the right thalamus, in the head of the caudate nucleus of both sides, in the left cerebral pen-

dulus.

- Liquid collections of the middle ear cavities, bilaterally.
- Conclusions: In addition to numerous tear-contus outbreaks of direct trauma, combined with severe widespread axonal damage (Grade III by Adams Gennarelli).

After processing, 9 months later, the MRI brain scan in Fig. 6 (right) is showing no obvious changes of the acute brain. Gliotic outcomes bilateral frontal, right temporal, left talamic and the sphenium of the corpus callosum. Ventricular system in axis and not dilated.

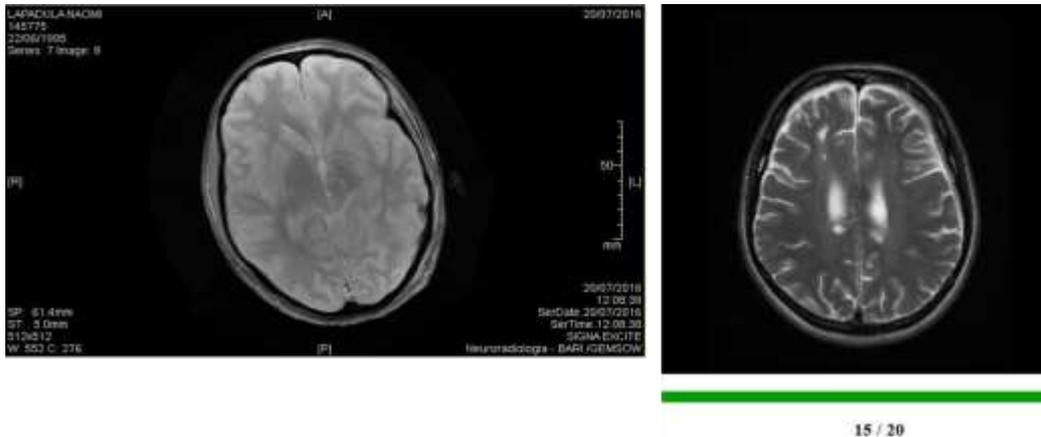

Figure 6. MRI of the brain. Left scan (20/07/2016). Right scan (24/04/2017).

Universe in a bottle –

‘cola bottle’

plasma reactor

-2-

AUTHOR'S REMARKS.

261st Knowledge Seekers Workshop 03:21:09

<https://youtu.be/8b6Fg0lUOao?t=12071>

If you look what is hanging in the bottle, inside it looks like a parachute. We gave this, when a company in Belgium approached us and they wanted to test this, we gave them one parachute to test. They took the Nano-coating of the parachute, which we have tested to know what it is, and they found on this layer graphene, which at that moment, was a miracle to produce. Even now is not easy to produce. (...)

This parachute, from this bottle... and it is a huge breakthrough in the world of science, because we could, as now you see it, we can produce graphene, very easy. And if you understand it, a lot of people for years they called it the magic liquid, the Keshe liquid, the plasma liquid - every name but nobody ever called it caustic soda. And the beauty with it is, if you look at it, you are still following what is in that bottle. It is a beautiful message in that bottle.

At the bottom there are GaNSes, at the top, there are Nano-material. Each strand is different height

and different position creating a wind, which leads to creation of hydrogen, and in so many ways, Deuterium and Tritium. And the whole structure of it has a beauty, that if you test this many times, do not look at the electrodes look at the red cap on the top. You will find out, when you take the cap off, there are hardly any threads left. Due to the pressure on the condition on this end, and there is a little button at the end of the bottle, you create atomic hydrogen. The carbon gets absorbed in the layers of the copper and releases atomic hydrogen, which is part of the space technology. This is how we fuel the space reactors. (...)

It is very interesting, how the height you put on it... These are copper nails from the roofing, we call it parachutes. The extension of this is, you have seen it in what we call the empty box of universe, and the sphere where you see the electrodes hanging. We could dictate the position of it, the flow of it, the field flow of it. There is a lot of... I have made many, many of these, just to study patterns of the field flow, extraction of materials.

Current flow in these electrodes is very interesting. If you put your electrodes, for example, here and here (Fig.1 - electrodes 1 and 5), and you monitor it, you see it goes to up and then it comes down. It goes positive to negative, and then you just change it to the other one, and then you bring it here. You see the flow pattern of the fields, how

the pressures are created (Fig. 1 - (E)). When you test them in, if you dip in one, for example electrodes in the liquid (Fig. 1 - (C)), it becomes like a system which has got a matter state, then you see a different pattern. Usually one goes 1 - 1.2 volts and ... milliamps.

It is very interesting that this cap (Fig. 1 - (A)) is the condition and there is a button (Fig. 1 - (B)) here at the bottom. At a given pressure, due to the condition of the cap, this opens up. Inside (Fig. 1 - (A)) - when you open it, there is no thread. This, this C-H combination here, due to the caustic and the copper, and now you understand the structure, releases the Carbon, and you have totally hydrogen, pure atomic hydrogen (Fig. 1 - (D)). Never been done. It is so beautifully, it has never been done in in the world of science, and with it, if you take these electrodes... We release this in 2005 and after it was claimed, and then there is a Nobel prize won because of this, by a University in England. (...)

You see this parachute is here (Fig. 1 - ends of electrodes 1-5), they are at different heights. This creates a vortex of winds of fields and with it, due to the shape of cola bottle, it pulls in the carbon, and it gets absorbed in the layers of the copper and it becomes graphene. That is where we see it, that is where we know, where the graphene sits. Graphene comes through and then with it, it releases atomic hydrogen.

This is how the process comes and this is how it, it stands. So, the carbon, as the pressure, magnetic field pressure here balances. Now when you make CO₂ systems, if you remember, you already make it to create CO₂, now you understand, you absorb the carbon from the atmosphere and it becomes CO₂ at the bottom, you see some of it (Fig.1 - (F)).

But this carbon gets pulled out, goes between the Nano layers of the electrodes of the copper as it is creating Nano. When they tested it, they saw this is graphene.

CHOCOLATE BELL PEPPER PLANT - A TESTIMONIAL

This is a testimonial describing how Plasma Science and Technology, through use of Plasma waters made with various GANSes, restored a Chocolate Bell Pepper plant to full health.

The purpose is to bring a solution that will assist others with a similar need.

Plant History and Background

In March 2017 I purchased a non GMO Chocolate Bell Pepper plant from an established local family owned nursery. It was a young healthy plant.

Bell Pepper before Caterpillars

Containers are used for gardening because I cannot put plants into the ground in my location. The summer temperatures can reach 105 - 115 or more degrees Fahrenheit on a daily basis.

For this reason I use plastic not clay containers for the plants. I prepare the new or reused plastic pots by spraying them completely inside and out with a mixture of CO₂ Plasma water (90%) and CuO Plasma water (10%) and allowed to dry between applications. I do this a total of 3 times before use with a new plant to limit possible toxins, fungus or the alike in the plastic or otherwise left in the pots.

Bell Pepper before Caterpillars

The plant was transferred into a larger pot with the best soil that is produced and available locally. No fertilizer was used. Instead a mix of 2 ounces of CO₂ Plasma water, 1 ounce ZnO Plasma water in a gallon of water was applied for first week after transplant. After that it was fed daily with a mixture of 1 ounce of CO₂ Plasma water to 1 gallon of water, as needed. It grew to produce beautiful tasty sweet bell peppers its first season July of 2017. While these peppers look like they were dipped into chocolate, they taste slightly sweeter than the typical green bell pepper variety. They do not taste like chocolate. The plant survived the winter months to produce more peppers ready to harvest in April and again in July 2018. From time to time during exceptionally cold, hot or other harsh conditions, the plant was supported with a Plasma water master mix blend.

Master mix blend

- ♥ CO₂ Plasma water 5 oz
- ♥ ZnO Plasma water 3 oz
- ♥ CH₃ Plasma water 2 oz

Add one ounce of master mix blend to one gallon water for use.

The Feeding of Others

In August 2018, I went outside and saw that caterpillars had eaten the plant overnight. There were no leaves and very little stock and branches remaining. The caterpillars were still there and still eating. Since the plant was in such bad condition, I decided to allow the caterpillars to finish filling themselves up and let them leave on their own. I wasn't sure if I would be able to save the plant so I didn't want to relocate the caterpillars at that time and risk harming them. The next morning all caterpillars were gone from the area.

Caterpillar

Bell Pepper after Caterpillars

In the past when I had a badly damaged plant that had no leaves left on it I was not able to save it. However, this time was different. I have been studying Plasma Technology through private classes available through the Keshe Foundation and learning to work with GANSEs and Plasma waters on multiple levels. I decided to apply this knowledge to the rescue of this plant. I started with a wish that the plant survive.

Plasma Waters to the Rescue

The first step in my Plasma rescue plan was to mix 1 ounce CO₂ and 1 ounce CuO with 10 ounces of water in a spray bottle (used as needed-full amount was not used here). Using this mixture I sprayed what was remaining of the plant with the intention of removing any biological material or disease that the caterpillars may have left behind.

Next, I made 3 health rings and placed them on top of a stick that was in the pot for support for the heavier part of the plant, which was no longer there. The stick was now taller than the highest part of the plant. The health rings were made with:

- ♥ 7 inches of tubing filled with full strength CH₃ Plasma water
- ♥ 6 inches of tubing filled with full strength ZnO Plasma water
- ♥ 6 inches of tubing filled with full strength CO₂ Plasma water

3 rings – CH₃, ZNO, CO₂

They were secured together with a piece of clear plastic food wrap. Tape could be used too.

The root system was fed using the master mix blend, and I also added 2 drops of CuO Plasma water to the gallon mixture until new leaves appeared then the use of CuO was stopped.

By placing the health rings higher than the tallest part of the stock that was remaining on the plant and feeding the root system with the Plasma master mix water, it was my intention to create a Plasma field flow similar to a toroidal field around the plant. I felt that this would encourage new growth.

“The Fun Has Just Begun” (Mehran T. Keshe)

To my amazement on the third morning there were new baby leaves starting. The plant was fed with the master mix blend Plasma waters daily. It continued to do very well. About 3 weeks later we had an extremely intense hail storm that lasted about 15 minutes nonstop. As the hail slammed

into the plant, I was surprised it was able to withstand the impact. The new leaves torn, but still intact. The Plasma dome held the plant safely. We were changing season from fall to winter when the plant decided to start producing flowers.

The flowers actually turned into peppers as we moved into colder and colder weather. It has been slow growing for the peppers development. We had a couple more small quick hail storms that left the peppers scarred but yet they kept growing. The peppers started to turn the chocolate color at the end of December 2018. The peppers became damaged due to exceptionally cold

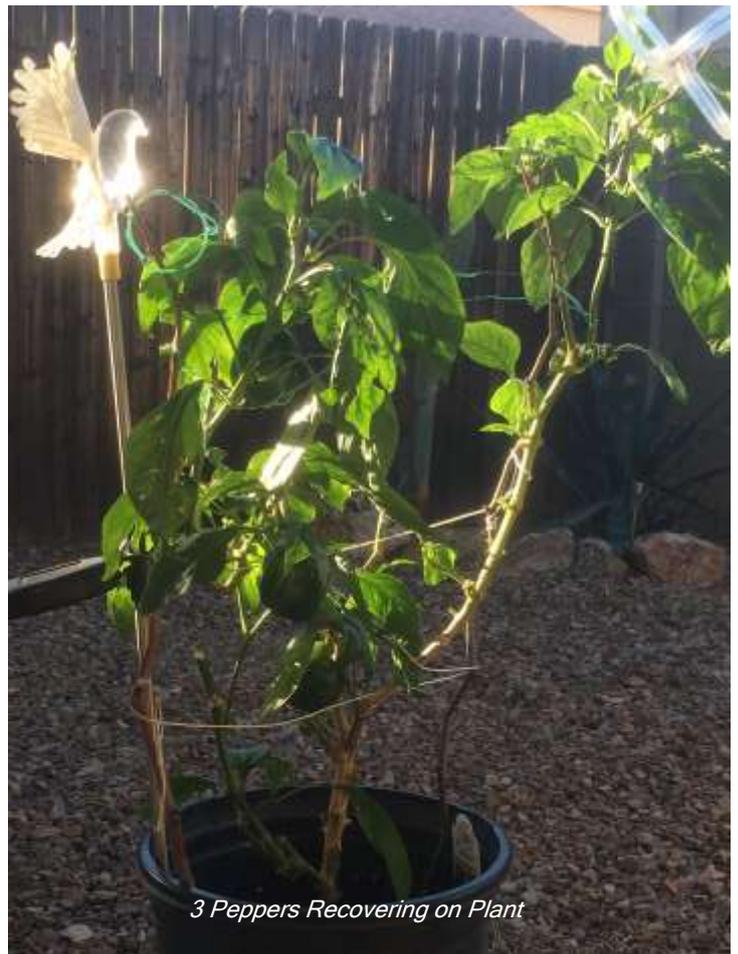

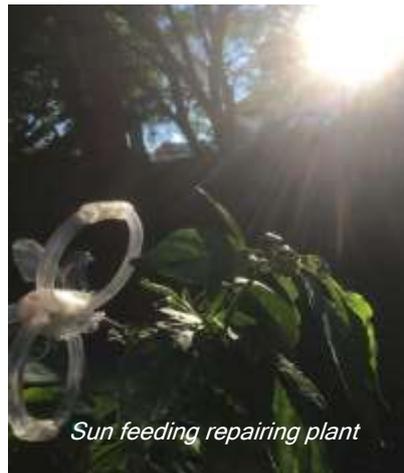

conditions (overnight temperatures as low as the middle 20 degree Fahrenheit). I do cover the plants at night but the flesh had become soft. In of February 2019, the first pepper became the proper color. I harvested it and checked the inside. The inside flesh was mostly the correct color. There was discoloration at the bottom. The inside was as usual. There were even 15 seeds. With everything this plant has survived, I am sure it will continue to produce more tasty peppers once it warms up during the regular growing season.

Acknowledgements

I would like to express my gratitude to Mr. M. T. Keshe for his dedication to sharing his knowledge with us freely for the betterment of all equally. I would like to thank Carolina Keshe for always being available to support the Keshe Foundation teachers, students, Knowledge Seekers and all that reach out to her. Thank you to all Keshe Foundation team members working in front and behind the scenes and Knowledge Seekers past, current, and future for what you have or will give back to the Keshe Foundation. Thank You for your time and for reading about the Chocolate Bell Pepper plant’s recovery.

ABC

of publishing in

PLASMA SCIENTIFIC JOURNAL

A. Prepare your work

Firstly, you need to prepare. You can either document the work which has already been done and perhaps even presented by you in the testimonials meeting or website, or you can plan a new experiment. You should always be clear on what you are trying to achieve and document everything as you go (label and take pictures).

B. Write your paper

Gather all the notes and pictures together and when writing your paper put yourself in the reader's shoes. Do not assume anything but present everything from the start, explaining every aspect of the experiment, which may not be obvious, and remember that "a picture is worth a thousand words". If needed, relate to other peoples' work by referencing their articles, websites or other openly available resources. Start by downloading the Scientific Plasma Journal template and short guide for authors available at

<https://support.keshefoundation.org/faq.php?section=science-journal&qid=189#q189>

C. Upload and submit

Once finished, upload your Word, OpenOffice or PDF file onto one of the cloud or filesharing services, or even onto Facebook. Go to <https://support.keshefoundation.org> and from the drop-down menu select Plasma Scientific Journal Submissions and press Go. Through this website, you can either submit your work, ask a question or access resources and the FAQs.

Any question? Get in touch with us via
