Nowruz (Persian: نوروز Nowruz, [nou'ru:z]; literally "new day") is the Iranian New Year, also known as the Persian New Year, which is celebrated worldwide by various ethnolinguistic groups.

Despite its Iranian and Zoroastrian origins, Nowruz has been celebrated by diverse communities. It has been celebrated for over 3,000 years in Western Asia, Central Asia, the Caucasus, the Black Sea Basin, and the Balkans. It is a secular holiday for most celebrants that is enjoyed by people of several different faiths but remains a holy day for Zoroastrians, Bahais, and some Muslim communities.

Nowruz is the day of the vernal equinox and marks the beginning of spring in the Northern Hemisphere. It marks the first day of the first month (Farvardin) of the Iranian calendar. It usually occurs on March 21 or the previous or following day, depending on where it is observed. The moment the Sun crosses the celestial equator and equalizes night and day is calculated exactly every year, and families gather together to observe the rituals.

Typically, before the arrival of Nowruz, family members gather around the Haft-sin table and await the exact moment of the March equinox to celebrate the New Year.¹ Everything that is symbolized represents the life, the creation, what man has achieved.

- ♥ "Serkeh" (Vinegar) it means Man has matured to convert, to produce from the Earth.
- ♥ Goldfish is the sea. It represents the life of the sea.
- ♥ "Sib" (Apple) is what comes from the trees, representing the access to above.
- ♥ "Sonbol" (Hyacinth flower) by the strong scent this flower produces it is announcing the beginning of the spring.

¹ <https://en.wikipedia.org/wiki/Nowruz>

- ♥ Decorated Eggs. The eggs were usually put on a flat surface or on a mirror with another mirror in front of it. It is said that in winter the Earth is on the horn of a bull. When the change of winter to spring happens, the bull throws the Earth from one horn to the other and the Earth shakes. And usually one looks for that vibration of the egg and you see it is the beginning of the spring.
- ♥ "Sabze" (Grass) is usually a grain, wheat or lentils which is soaked in water 20 days before the New Year and it is let to grow. On the 13th day, this grass has a special effect. It must be taken out of the house, symbolizing that if anyone came in and put bad luck or similar on the house members, then the grass is thrown out on the running river, so it can take everything with it. On the 13th day of the Nowruz hundreds of thousands of this grass bunches are seen floating on the rivers. Before being thrown away, one must knot a few grass strands together and make a wish.
- ♥ "Somaq" (Sumac), the orange dust is showing the maturity of the man that managed to process the grains, it represents the dust of the Earth.
- ♥ "Sham'dan" (Candlesticks) are lighted and stay on. The superstition is that no one should blow the candle out.
- ♥ A gold coin must also be put on the table and it represents the wealth for the family.

"The Iranian culture understood 3-4000 years ago the cycle of this planet which is now called annual. The Iranian New Year goes to the precise second of the change, is it not by 12 o'clock. So 365 days, we have so many hours and so many seconds, brings Earth back to the point of the New Year. The Iranian New Year and the whole of the Silk Road countries calculate to that second. 2019 the change of the time was 23:58 and a few seconds CET on 20th of March. Next year it can be different. If it is before 12:00 noontime that day becomes the first day of the New Year. If it is after 12:00 noontime, the next day becomes the beginning of the New Year. The table prepared with all the elements stays as is from the New Year day for 12 days. In those 12 days, all the family members and friends meet and celebrate together. On the 13th day of New Year, no one in Iran should do anything, no one should work anything because it brings bad luck."

Iranian culture is about love, care, and respect and it was a pleasure to share such celebration within the Keshe Foundation.

THE UNIVERSE IS **NOT** COOLING DOWN

by Keshe Foundation

One of the biggest errors in the world of the cosmology, error that represents the creator of the understanding of problems in the Cosmo-physics, Astrophysics, and in the present physics, that even Einstein emphasizes on, is that they use the terminology of the cooling of the Universe and not the reduction, in the magnetic field strength of the fields of the Universe. The Universe never cooled down. In the interaction of the fields, it has lost its strength and it is a reduction in the field strength, that leads to the creation of the new matter, in the new dimension and strength. This is something that as the understanding of the total structure of the cosmology, it cannot get out from the scientific circles. "There was never heat in the creation of the Universe. It is a step-down reduction in magnetic field strength, which leads to the creation of new matters, at the strength of their vision, not in the totality of it. Otherwise, it would have been one solid block of Universe because it is all matter, all the time. We see matter, in different strength, in our line of vision and confirmation of existence, not in cooling of the fields. This is not a cooking pot, it

is the interaction of the fields, that in reduction, create the creation. When you speak about the truth, about the fields of the Universe, and somebody tells you, 'It cooled down and life was created.' I do not see any cooling down when a neutron splits into an electron and a proton. I see a reduction of fields, and according to the package, the size of the fields, their strength, they create a new dimension as electron and proton. We have heat in the nuclear reactors because the fields interact with the matter state of the liquid and they lose their heat to it. Inside the plasma of a neutron, there is no heat, as it is a reduction in the field strength." "Is the center of the Sun billions of degrees, as they tell us? Or, it is just a reduction in the field strength, and in touch like a nuclear reactor, when we touch the water of a different matter state, with the fields of the radiation of the nuclear material in their motion, we create heat. This is what happens, on the surface of the Sun. This is what happens on the surface of the Earth. Due to the interaction of the fields, of the Universe, with the inertia matter state of the planet, we create heat. Not due to the interaction of the

gravitational magnetic field, from the center of the planet. The whole world of physics is totally upside down. When you read the Paper about the 'Unified Field Theory', you understand where you stand in respect to yourself. All the misconceptions as the extension, breaking, gravity are different than magnetical and magnetical. It is totally something else than gravity. It is just a point of reference. For the field to get to you, it reduces its strength, as it gets closer to you because it has to interact with so many other fields. In that process, it heats up, because it loses so much of its energy. If this was so, that by the interaction of the fields, we create heat, and the heat reduction leads to the creation of Universe, then when you put two magnets together, North and South, you should see creation of a lot of Universes, because, there should be a lot of heat in there, and you can cook on it. It does not happen! This terminology, of the cooling of the Universe, led to the creation of the stars, it is a much false as Hawking's, "black hole" and Einstein's, "the speed of light".

CARBON-14: THE PATHWAY, THE FREE ENGINE, THE FREE ENERGY RESOURCE FOR THE STRUCTURE

If we look and understand how mankind has taken a step and has gone through the process of creation, a lot of mysteries about the life of the man, operation of the life of the man, the soul of the man, operation of the soul of the man, operation of physicality of the man - all can be understood. All can be taken to the next step. What does this mean?

One of the fundamental problems, in the whole cycle of the understanding of the physiology of man, is the construction of the physicality of the man, and how **everything has been based on one or two elements**. The man has calculated everything else but these one or two elements. This is very much like we have missed half of the equation. We have missed half of the knowledge. We have missed part of it, which was really there, and we did not see. Or, we never understood that this is part of totality; this is part of what we have been missing. This is in essence part, which will bring us to understand it.

This Carbon-14, as the energy of the plasma, as the energy of the fields of the plasma, has never been understood, in clarity. Man has made, because of his

presence, a lot of mistakes in this structure of the amino acid of the body of the man. It causes cancers and it cures cancers. It creates the destruction of the connection layers of the brain of the man; it leads to your age, your stroke; it leads to the understanding of the total work. It affects every operation of the physicality of the man. It affects every operation of the soul of the man. It affects every connection between the soul of the man and the soul of physicality. And most of the time the world of science has never considered, or never understood, what this means.

What can be created, what can be given, what can be added, what can be amalgamated from an understanding of the work of the Carbon-14?

One of the problems of it is that the scientific world has not managed to produce it - the way it works in the body of the man, in what we call as a GANS condition, as a plasmatic condition. It has a sequence, it repeats itself in different combinations, and because of its dynamism, and it has separation of the physicality from the neuro-system, man has always ignored it.

If you look in the dimension of the work of nitrogen, we look to the work of Carbon-14, and we look into the operation of CH_3 . It has and should have given us a lot of clues because, with it, you will understand the work of the transmutation.

How transmutation becomes possible? It comes to the work of transportation across the Universe. It comes from the point of insulation and isolation of the fields of the Universe. It comes to understanding the totality and the relationship between different parts and structure of the physicality and the soul of the man. And in so many ways, it is the pathway of the soul of the man, to connect with the Universal Community, in the path of the line of communication.

When we spoke about the Carbon in CO_2 , when it is used for conductivity and connection in medical applications, or in other fields; Carbon-14 is the same but in the dimension with a connection with the soul of the man and physicality of the man. **Is the pathway**, the way, the wire, the string where the soul of the man leaves the physicality of the man. It is the connection, where you go -

a dream time. But it knows where to connect to. It happens through that. It has a fingerprint of the interaction of the soul. It has a fingerprint of the interaction and action of the Universe. And in so many different ways, we have to understand the work of Carbon-14, Carbon at all - all together.

What is Carbon-14? We look at Carbon-14 in a plasmatic state, not in a matter state. But in so many ways, if we look at a Carbon-14, partially in the world of the science, the present science, they call it graphene. It behaves that way, on some occasions because it looks as to be the end, and at the same time, is the beginning of every nerve. One end of the neural system, where your nerves stop is the orientation of the Carbon-14, which creates the feedback. It is Carbon-14, which gives you the isolation at the point of amputation, and the release of energy, the phantom pain. And it is part of the whole structure of our existence in real life.

"Carbon-14, radiocarbon is a radioactive isotope of Carbon, with an atomic nucleus containing 6 protons and 8 neutrons. It is present in organic materials. On organic material is the basis of the radiocarbon dating method pioneered by William Libby and colleagues to date archaeological, geological and hydrogeological samples. Carbon-14 was discovered on February 27th, 1940, by Martin Kamen and Sam Ruben at the University of California Radiation Laboratory in Berkeley, California. Its existence had been suggested by Franz Kurie in 1934.

There are three naturally occurring isotopes of Carbon on Earth: Carbon-12, which makes up 99% of all Carbon on Earth; Carbon-13, which makes up 1%, and Carbon-14, which occurs in trace amounts, making up about 1 or 1.5 atoms per 10 to the twelfth atoms of Carbon in the atmosphere. Carbon-12 and Carbon-13 are both stable, while Carbon-14 is unstable and has a half-life of

5730 years plus or minus 40 years. Carbon-14 decays into Nitrogen-14 through beta decay. A gram of Carbon, containing one atom of Carbon-14 per 10 to the twelfth atoms will emit about 0.2 beta particles per second. The primary natural source of Carbon-14 on Earth is cosmic ray action on Nitrogen in the atmosphere and is, therefore, a cosmogenic nuclide.

However, open-air nuclear testing between 1955-1980 contributed to this pool. The different isotopes of Carbon do not differ appreciably in their chemical properties. This resemblance is used in chemical and biological research, in the technique called Carbon labeling Carbon-14 atoms can be used to replace nonradioactive Carbon, in order to trace chemical and biochemical reactions involving Carbon atoms from any given organic compound."¹

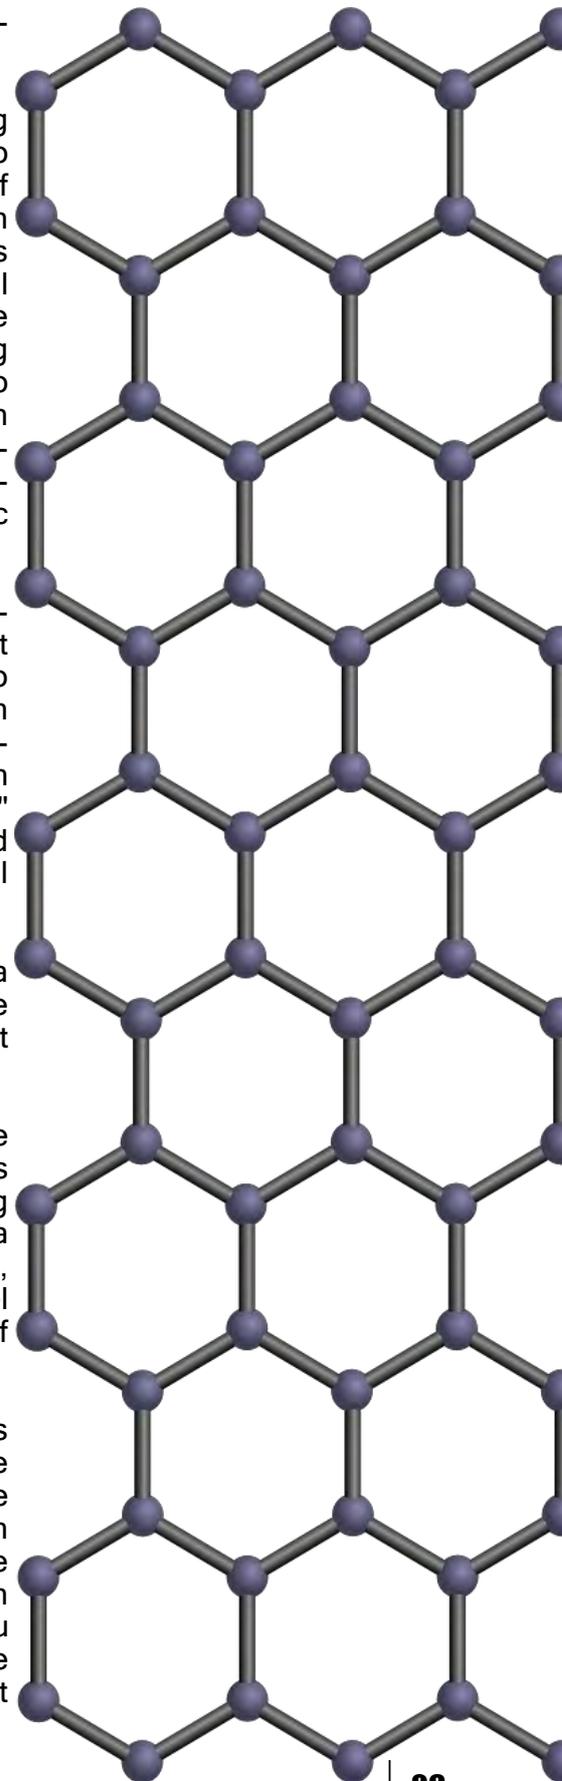

It says, "Carbon-14 is a radioactive isotope of Carbon", and then it says, "Carbon-14 can be used to replace nonradioactive Carbon, in order to trace chemical and biological reactions involving Carbon atom for any organic compound." When you read it, it is explained that it decays to nitrogen, but all this is in a matter state.

In the condition of the plasma body of the man, and in the dimension of the Universe, what does 'radioactive' mean?

It means energetic, and the energetic dimension of this Carbon-14 is absolutely amazing because it is not being a beta decay, it is being dynamic, plasmatic fields, which travel continuously beyond the speed of light, on the matter state.

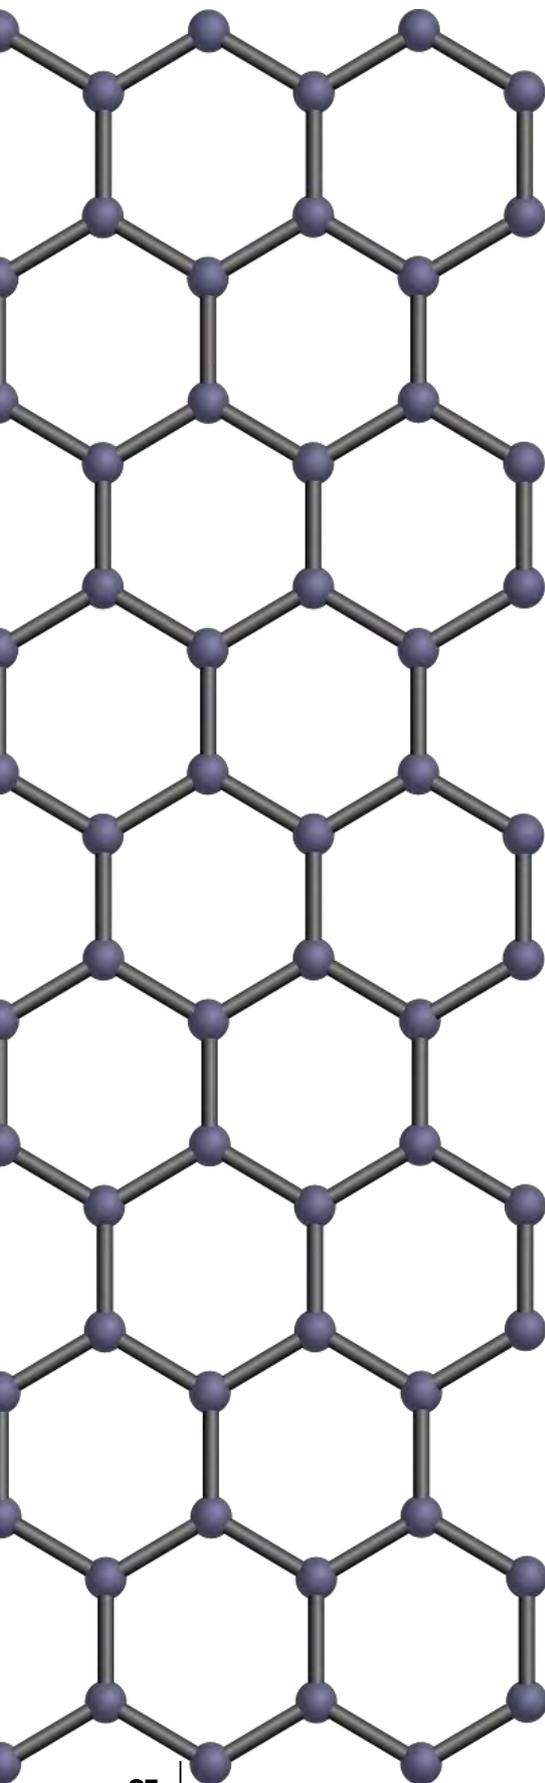

The reason for it is that neutrons are the source of energy because they want to decay to create stability. They split into a proton and an electron to create a stable condition for themselves. But, in the case of the Carbon-14, you have two neutrons, at the same time busy releasing, and in that

process to do dynamic point centers, trying to balance, or create a balance in their field interaction, creates a line of insulation. A line of the magnetic field, which does not accept any more because at the moment it has circled itself. In the term of magnetic insulation and isolation -

when you have the double neutron-base, like this - it means that the matter state of it is within itself. It isolates itself.

It has a huge amount of energy to release, and that gives a very high dynamic center to its Carbon structure and to the other 6 pro-

tons and neutrons, and it literally, it catapults this material. A normal Carbon does not behave like this - a radioactive material, which means has a huge amount of energy. In a plasmatic condition has a huge, huge amount of energy, which in balance with having no electron to feed off, to split into, that it can create a balance of itself to become an atom - it creates "super bullet" out of Carbon-14, and that allows the man to travel the depth of a space.

If you can replicate it, it teaches a lot to those of us, who want to understand. Because of this higher-speed, it creates a **line of transportation** for the field matter states of it. Carbon-14 is a plasmatic-radioactive, not a matter state radioactive. It is a source of energy, which is so much like a virus; it sits around the nucleus of the Carbon. And because of that amount of energy it gives to it, it just makes a fireball out of the others. It is a **free engine**; it is a **free energy resource** for the structure.

And when you enter the dimension of the matter state, a lot of doctors make a mistake between it and nitrogen. It is the cause of many cancers, but it can be understood due to its weight. Compared to the other Carbon, it leads to the combination of matter state interactions. It is a massive ball of fire and this fire does not stop. Because the energy released by one neutron to go through - what we call splitting, to become nuclear decay - is automatically absorbed by the other neutron, and in that process, in the dynamic magnetic fields, part of the energy given to other protons and neutrons - they become active too.

If you understand aging by, what we call, Carbon-14 dating, it should give you a very clear understanding - it is the time when you stop the whole process. Then you can trace it, when and how it was stopped by itself or, in the process, it went through, a condition that it had to stop, because of

lack of energy transfer.

Interesting enough, if we go to the next step and understand that you have Carbon and you have, in a way, a Tritium - two cells working together. Two cells working, in a way, like Helium, or in a way, as a Tritium, and sometimes due to their energy balance, they behave as just two neutrons.

What is the extension in how to understand how we age. How fast we age and why when we use the GANS plasma technology on the cell of the man, we see huge changes. Because we interfere with the line of field transfer energy. This is why our CH₃ GANS shows a lot of characteristics of Carbon-14. And if we understand it, we can fully utilize it.

When we take measurements on the decay of any material, we always make a mistake in the conversion of the energy of Carbon-14 with nitrogen. It is so common that because of it we have missed many, many parts of the whole structure of the understanding the body of the man works.

Name of the Agriculture Secretary

Administer of Agriculture

Country or Region

Date

Dear Name of the Agriculture Secretary

The Universal Council with support of the Keshe Foundation agriculture team is proud to announce a new developmental milestone in the world of agriculture. We offer cooperation and support to governments and their agriculture ministries that allow them to realize national and global food security through newly discovered GANS (Gases in Nano Solid State) plasma technology. This technology introduces farming and agricultural practices that improve yields, nutrition, and incomes without need for costly external inputs.

Plasma Science Agriculture Achievements:

- Use of newly discovered natural state of matter products known as GANS plasma water.
- Use of non GMO agriculture processes (proven through governmental tests).
- Reduction in use of groundwater in agricultural systems.
- Increased incomes for farmers.
- More than 30% increase in crop yields.
- Reduction of chemical agriculture inputs - no fertilizers and no pesticides.
- Progressive reduction of land nitrates and chemical soil contaminants.
- Decontamination of agricultural water from poisons and metals.
- Reduction in the use of antibiotics in farming practices.
- Reduction in growth and harvesting time.
- Increase of shelf life of agricultural produce.
- Greater crop tolerance to temperature variations.
- Increase in grain protein content without interfering with seed genes.
- Increase in fisheries and other aquatic farming systems.
- Improved health for people and the environment.
- Increase in national and global food security.

We invite you for a productive talk and look forward to meeting with you soon.

Thank you.

Sincerely Yours,

Your Name

When a weaker field comes to feed the stronger, it creates a vortex. The interaction of the fields of the vortex creates light: visibility. At the same time, the interaction of these two fields create noise, sound, so we have the "images of sound". We know the images of sound very well. But we never understood them. We know the images of a sound, of light in the perfect motion, and we have learned how to convert it. Yet we never sit and think to literally understand this process. This will become a painful barrier for many of mankind, in the depth of Space. Many men, who are human beings, will return from Space,

what is happening and, the soul uses the eye, the cavity of the eye, or the hole of the eye, to be able to break into the open spans of the Universe, in a much easier way, without the bandwidth. When we go to sleep the vision of the soul of the man, does not matter if the physicality of the eye of the man is closed, the man comes across the mother (Fig 1D). He can see, and in return recognizes this soul, through its image, as the mother (Fig 1E). But... since when we listen through our eyes? When you dream, does the voice of the mother goes through the earhole, that you hear the conversation? Or, on the return of it, it is convert-

you will not hear him because you blocked the hearing part from the physicality of the man? Now you understand how the soul of the man, through dimension of itself, not only sees, but hears through the same, feels and shares through the same. It does not need an arm and a leg, to feed itself; through the span of Universe, in what has seen. He can take what he likes. When it comes to the depth of the Space, you see the soul of the Creator, or the soul of the creation, and it is for you to understand, what it says, through the light of the eye of the man. It does not make a noise that it can come through the ear of the man.

IMAGES OF SOUND

by Keshe Foundation

260th Knowledge Seekers Workshop
<https://youtu.be/eMfXjilNYg?t=3409>

totally mentally disorientated. What is the reason? Man knows this effect on this planet, but has never stood still to understand it? In the Space, we will face this and man has to sort this problem, for himself. We have the soul (Fig 1A). In time of sleep, or of a weakness, the eye is the doorway for the soul. As much information goes out (Fig 1B), more comes in (Fig 1C). Day or night. It does not matter if we close the eye lids or not it continuously absorbs a vision of seeing

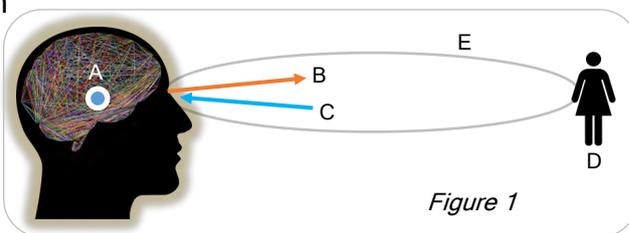

Figure 1

ed to the noise of the mother, the voice of the mother, as it returns back to itself? Then, is there a reason, that man considers that he hears the voice of the mother and what she says through his ear, in the soul? The information actually transformed to the knowledge of the words we understand at the entry through the eye of the man, and not through the ear of the man? Would you hear God, if he speaks to you? Or, if you put your fingers in your ears,

What we understand is when we dream about our mother, and she speaks, do we convert the voice, in the eye of the man, in the direction of the soul of the man? If you are deaf you should not be able to hear the mother? If you are blind you should not be able to dream of the mother and see how she looks? Or, when you sleep, and close your eyes, you cannot hear, or see your mother but you remember everything about what she said, how she looked, what she was wearing. Now you understand, how simple the truth about creation of life is and how much we have misinformed ourselves.

CARBON-14: PLASMATIC CALCULUS AND A HIGHWAY TO TRAVEL THE UNIVERSE

by Keshe Foundation

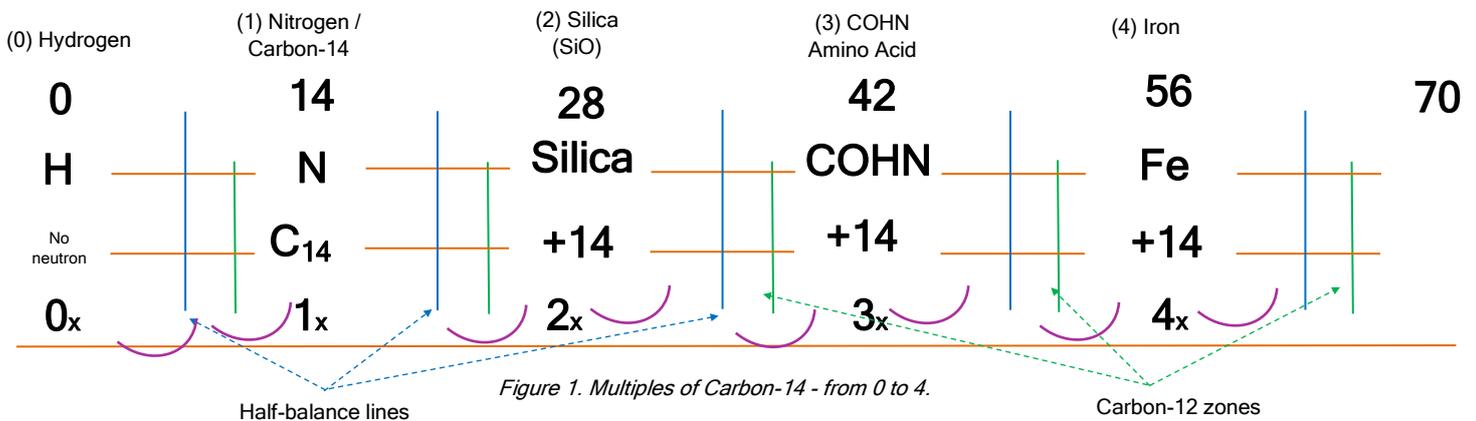

262th Knowledge Seekers Workshop

<https://youtu.be/VgNGpve4Haw?t=4582> / <https://youtu.be/VgNGpve4Haw?t=10113>

When you have a Hydrogen (Fig. 1 - Hydrogen), it is not an atom, in a way, it is a half atom because it does not carry any neutrons. The next here is Nitrogen, or if we can put it, Carbon-14 (Fig. 1 - Nitrogen). Then you understand the process 0 to 14. Now the next 14 comes here again Carbon-14 but it shows itself as silica (Fig. 1 - silica). You understand, you see it there; another 14 - one of the main components of the life of the man. When you take this to another step - another 14, is dynamic, 42 (still Fig. 1 - COHN). In the transition of the strength of the magnetic field, is Mr. COHN. Where does it take this to?

our scientists of the past have forgotten and have not seen. Because they never considered a dynamic structure that none of it, one of it, two of it, three of it, four of it (Fig. 1 - marked (0)-(4)) has created the cycle of life on this planet for mankind. And look at the half-balance lines (Fig. 1 Blue) and then you see how the life of the man has gradually taken shape on this planet. This raises a fantastic question. Would the body of the man, working on a Carbon-14, will suit to travel the depth of the Universe on the lines of the Carbon-14 magnetic field of the Universe? It is absolutely a perfect match. And if you look at every

line of communication of our soul. Through the physicality, we communicate the energy transfer to come on top, but the work of the Universe through the transfer of the soul is Carbon-14. We live through Carbon-12, our soul lives in the line of communication of Carbon-14, and this is how we will travel the space of the Universe. Then you understand how easy should be for mankind to become travelers of the Universe. Every indication on the transfer of gravitational-magnetic field of the space of the Universe speed sits within the structure of the amino acid and the physicality of the man, in a dimension of magnetic

Now you see, how Carbon-14 has been the backbone, and different combination of it - here is 56 (Fig. 1 - Fe), the next one is 70 (Fig. 1 - to the right of Fe); and then look what 70 does. At COHN we do not see usually what takes place as another element we know, with number 42 [Mo - Molybdenum]. Then you understand how much

other zone with Carbon-12 (Fig. 1 Green), then you understand how the soul of the man and the physicality of the man, physicality of the man the soul of the man continuously repeat themselves (Fig. 1 - Purple arcs). **That is how we dream.** This is how the two are so close to each other, that we have lost the sight of our soul, the

fields. You are a perfect match! Does the man understand that much, that by checking the physical dimensions in matter state, sees silica, Nitrogen, amino acid, and iron; or is it in reality, multiple combinations of Carbon-14? Then it comes to us, a new dimension in the line of communication for the control of our space reactors.

Understanding the creation of the soul, the dimension of the emotion of the man in the line of physicality, and the soul of the man is to understand how to travel, how to nourish, how to multiply anywhere in the Universe.

Q&A, Holger: Can you please give us practical advice and training, on how to use emotions for communication with our soul, or Soul?

Find a common denominator, between the strength of the soul, line of communication, and the strength of matter line of communication. It is somewhere around 160, which is ten times the magnetic gravitational field of the oxygen, gravitational field of the oxygen. If you multiply 12 by 14 gives you something like 166. You have somewhere between that and then somewhere with iodine - which is a soul of the man with the dimension of containment of the strength of it. Now you know the strength of it. To contain it, you have to be higher. Dividing what is 126, you have to give a stronger cage, that you can contain it - which is 166. If it is lower, it escapes. If you find a combination of elements of the totality of the structure, which is very much the containment of the amino acid of the man - then it gives you the dimension of the existence, taking into consideration possibilities of all the fields. If you multiply 42-43 by four times, it gives you how it comes to be part of the structure of the creation of the matter state of the brain of the man. (...) Those of you, who work on the dimension of any transfer, transportation in the dimension of a structural conductivity of the physicality of the man, or the soul of the man, now you have found the answer.

When you look at the Alex beads Magrav systems. You use CO_2 for communication line for diabetic and everything else. Now, you can add the dimension of the transportation of the soul to it. Now man has two choices: Do I want to travel in the dimension of the slow of a Carbon? Or, do I want to

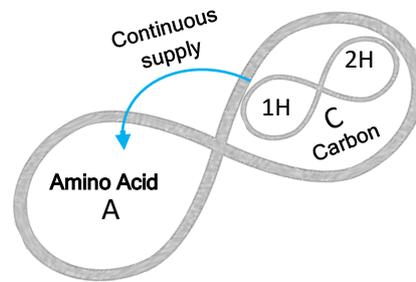

Figure 2. Release of energy from CH_3 / carbon-14 to the amino acid of the body of the man.

travel in the dimension of super-speed of the soul? Can I use the plasmatic-magnetic field of CH_3 , which I can produce so easy, to become the giver of energy, as Carbon-14? Is there a shortcut to it, or does the sugar behave like Carbon-14 in superconductivity of the energy of one Hydrogen atom? Is this why the body of the man evolves so fast on this planet, because of the presence of the basic sugar, which gives you a Carbon-14? Which itself, already very active, has an additional way to release the energy of, to become energy, the source of energy. Or is the additional electron, or additional neutron, or additional proton - depends how you define it - which becomes a point that, due to interaction of the two neutrons in Carbon-14, in a physical collision with the additional proton, leads to release of energy, that man needs to create the dynamism in the amino acid and become the source of energy?

In a way, we introduce a barrier. When the bullet comes, let us absorb the energy of it and that energy, with that bullet, which the bullet releases continuously, is by the double protons or neutrons, as you have an energy confirmation in the plasma condition, which with the interaction of the lighter one - two to one - that is two protons confirming with the electron as a neutron. In the CH_3 with a third one, it is like putting a barrier or creating in a plasmatic field force, very much like you create a motion (Fig. 2 - small infinity symbol). The two Hydrogens and the single Hydrogen (Fig. 2 -

1H and 2H). In the process, where you already have a Carbon (Fig. 2 - C)- you create a release of energy to the amino acid, which is bound to it (Fig. 2 - A). This amino acid becomes active, it receives energy, it can survive. If we can increase the binding of CH_3 , or a Carbon-14 in the presence of the body of the man, which creates a continuous supply into the amino acid - it means the amino acid does not need to continuously deplete and then replete. It gives a life of centuries to man because there is no damage.

There is no continuous depletion and refilling it. This is how you can extend life on this planet. A simple understanding of the transfer of the fields of the Universe can make a lot of difference for the man. Now you understand how we can even extend the life of the man, through understanding the operation of Carbon-14. And how we can use this operation of Carbon-14 to create the fast-dynamic motion of the protein or the body of the man in the dimension of the soul of the transportation.

Now we can understand much more. Now we can act upon it. We can operate through it, we can extend the life with it, and then we do not depend on a cycle of the rotation of one thing called the day, the year, or anything mankind has chosen to call it.

Have the scientists been right to measure the decay of life of anything on a Carbon-14, or did they miss the boat? Can we use the operation of Carbon-14 to create a new dimension for the life of man in the space?

FEEDING

FROM BLACK HOLE FIELDS by Keshe Foundation

What is important for mankind, is to understand the strength that this black hole pulls from the environment of the Universe, and so in the depth of the Space, we can use it to feed the physicality of the man. It is for the man to peacefully sustain life.

In the depth of the Space, where do we go? What do we look for? The only thing available with us are the fields which are free within the span of the Universe. The black hole is called the center of the soul of the man. If you look at it, the size of the brain of the man is a magnetosphere of this black hole. Then, you have to decide, through the emotion, by in a way controlling it, do you want this field? Or, do you want that field? Or, you are interested in the other field?

Depending on what you want to reflect yourself as to be or which part and which organ of this physicality, you want to feed the way we open our eyes and we go to a supermarket, and we see a chicken leg, breast, sirloin steak, can of tomato, and orange and apple.

Why do we do this? Because, we have learned something very simple, 'We can take this, put it in our mouth, and convert it to what we need. What our body needs. We need vitamin C, and we need vitamin A.

Why not work through the soul of the man, to absorb the fields, which led to the creation of the plasma, for it to be converted to the man, to be converted back on?

In so many ways, the secret is very simple to unravel. If this (Fig 1. A) is the black hole, the soul of the man, man exists in the dimension of his entity on Earth. And,

the black hole in a galaxy, somewhere in the distance (Fig 1. B). Can the man release so much, that he can tap, not only to the black hole itself, but to its magnetosphere, at a given strength, as it needs, and feed itself that man does not need to kill?

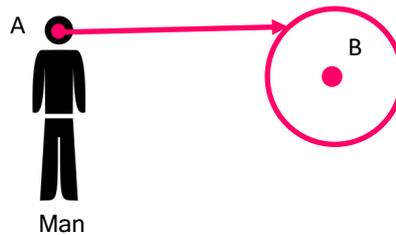

Figure 1. Man and the black hole

Do we always look at absorbing energy from the orange? What about absorbing energy from the depth of the Universe, as it is free and it brings what every cell of the man needs.

The truth of magnetic fields

To understand this, the creation of fields, and the direction of motion, and in a way, the feedback of it, that it can become part of what we need, it needs a little bit more understanding, about the truth of magnetic fields. If you look at it, the magnetic field, from a magnet (Fig. 2 Blue squares), moves from one magnet to another (Fig. 2 Pink arrows).

We know by the condition of the existence that the field will come back on itself. (Fig. 2 Pink interrupted line). In reality, there is a field flow in the opposite direction, in the whole process, as well (Fig. 2 Green arrows).

When we put two North Poles against each other, it creates a

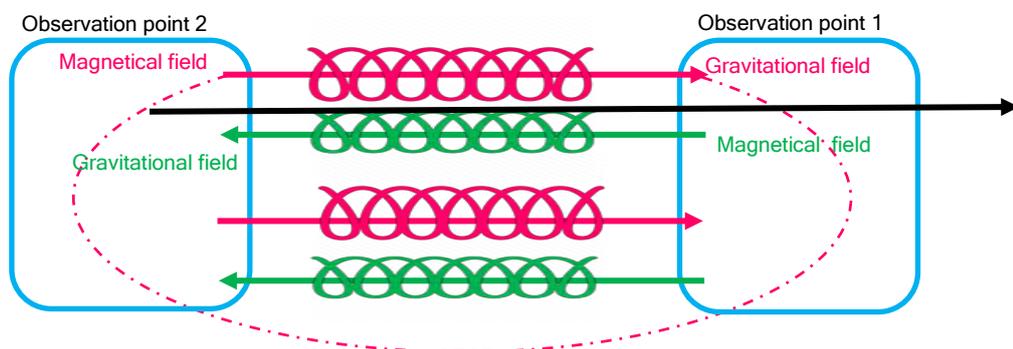

Figure 2. Direction and motion of Magnetical and Gravitational fields

space. As we are in the plasmatic condition, there is numerous amount of North and South Poles in the plasma of the matter. From the point of observer 1 the magnetical and gravitational are reversed as from the point of observation 2 (Fig. 2).

These fields in the interaction with its environment, it creates, very much, a magnetosphere of itself. (Fig. 2 Pink spiral). At the same time, the same happens and applies to the other fields, that they create their own magnetosphere. (Fig. 2 Green spiral). What will be interesting to see, is the interaction of the two magnetic fields, floating in the direction, but by the compactness of the material inside the matter states, will create light in this region, which creates a very effective line of interaction. If the man understands, become a trajectory, for a speed of light to travel, depending on what strength of the light you wish to travel in? (Fig 2 Black arrow).

What does this mean? Every field we see, which floats, every dimension we see, and we understand as we have the gravitational field in respect to where we have magnetical, which is in opposite direction (Fig. 3). In being dynamic, they create a vortex of life and light, which man can use. In so many ways, one is stronger and one is weaker. As the weaker comes to feed the stronger, it creates a vortex (Fig. 3 Vortex) that the interaction of the field of the vortex creates light, or what we call visibility. At the same time, the interaction of these two fields creates noise, or sound, or images of sound. The fields from the Central Line of the Universe, as they spread out, they interact.

In interaction, they lead to the reduction of fields, that in respect to that position, in the Universe, it leads to compactness, of what we call observation of matter state, in the eye of the man. In that position, we call it a galaxy or a star. But, if you are from another dimension, you do not see anything, it is non-existence. To us, galaxies exist, according to us, to point of observation of us.

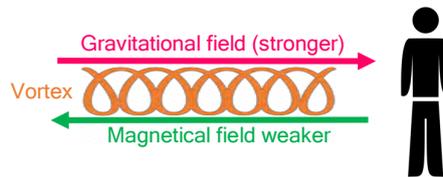

Figure 3. The vortex of life and light.

If you are from another Universe, if you are of the highest order of the strength, in the creation of the structure of your soul, the galaxies are just like walking through the cloud, they do not exist. Because it is not at the strength of my strength, it is below. So, to me, it has no matter state. But then, I

between the stars. There is never ever emptiness! Our vision, our point of vision magnetic field strength at the level of the protein of the man does not see the entities, which are sitting in these captured areas. We are galaxies, within the galaxies but we do not see the outer layers. In fact, there are more structures within the galaxies that they are not visible to us because our amino acid, at 43 proton/electron, only can create fields at the given strength, and not beyond it. And then, we say "Nothing exists." Because we do not see it? Can a blind man say "The Sun does not exist" because, he does not have the eye to see the brightness of the day?

As you become a man of Space you have to open your mind, you have to understand the totality. Because somewhere you can make a mistake and you end up in the center of a stone. Not necessarily stone, in the strength of the

260th Knowledge Seekers Workshop
<https://youtu.be/eMfXjjILNYg?t=3145>

see other galaxies, in the position, and different dimensions or times, according to my point of observation. We see, there is a lot of emptiness between the galaxies. We see, a lot of emptiness

field of the man, but in a stone in the strength of the field of the other dimensions of the Universe.

Now, get yourself out of that...

CARBON-14: A KEY TO THE CREATION OF 'BUS STOPS' PORTALS ON THE SUPERHIGHWAY OF THE UNIVERSE

262nd Knowledge Seekers Workshop

<https://youtu.be/VgNGpve4Haw?t=5901>

<https://youtu.be/VgNGpve4Haw?t=8369>

When I spoke about the separation of the gaps between the galaxies, I spoke about Carbon-14. The teaching now starts getting meaning, it starts having understanding, because if you can create a condition of transfer of the energy in the level of Carbon-14, we can tap into the universal transportation line. You can **tap into the understanding**, creating a life for the others who are the passenger of this line, to manifest themselves in the portal of life you create. All you do is create a new bus stop. Would anybody like to take off here? I have created a condition, which I can create in that replication.

It is the superconductivity within the conductivity of the plasma itself. Now you can imagine what the scientists were telling us. Not only now you have the superconductive materials in the form of the Nano-layering, now you have a superconductive path to

transport - now that we understand the body of the man is made of GANSEs.

Start adding up! But, do you want to invite everyone in or, do you want to have a specific length or specific people? You do not want to invite your cousins, but you would like uncles to come. And you do not know if the uncle will be dressed in the suit, or they will come in pajamas. How do you manifest that, only the uncle turns up and no cousins, only the cousins come, you do not want the uncles? Go back to the understanding of the field interaction of the gravitational field with inertia, which leads to the creation of manifestation of material or matter state.

Then you understand you can create the condition of the confirmation of existence by the introduction of the third strength in Carbon-14. Any passenger of the

Universe, which matches into that, will manifest in your portal. It is very much when you create a matter state with the interaction of the fields of your cores, it is you who by the introduction of inertia, dictates what matter from the energy of the atmosphere will manifest itself. In the case of liquid and Iron we manifested, we produced blood. In a case of interaction of the fields, we created Gold, Zinc, Magnesium and the others, which we have seen the test results as was done independently to confirm what has been collected.

Understand the transfer, the transportation and the connection between the soul of the man, which now becomes the language of the Universal Community in the understanding of this transportation line. Now, you can invite friends home, and then you dictate what friends. "I do not want this. I want to see what it gives me, at such

and such a strength in the spectrum of the Magnesium, with the Carbon-14, and see which creatures of God come up and appear - like the way inertia lead to the creation and manifestation of the energy of the Universe in the Gold or Copper. "Now we have learned how to manifest our guests.

But, you can use the same process to become part of, to join into the link of the superhighway of the Universe. Until your cousin or your son on the planet Zeus has created a condition of the amino acid strength of your Carbon-14, which leads you to land there with him. In that dimension, you travel through the communication line of high-speed, through what we call, the soul-speed of the man. Because, it is still its combination of amino acid but still is dynamic, that it can link into. (...)

You should be able to think, and your system should fly. Why we dream at that level, but we live at this level? Now, where do you think a line of connection to the strength of the soul of the man sits?

Armen: It goes to Iodine.

MTK: You have to understand this if you are going to play with the portals. Are you moving the soul? Are you moving the physicality? Because, if you take the element of Iodine - 126 magnetic energy fields, it is in fact, 11 times, 11.5 times, taking a percentage of field conductivity of the Carbon. It is around the interaction of the field forces of the matter state of the body of the man - which is Carbon -12. This is where the soul of the man, connects to the physicality of the man, in the dimension of their strength.

When you make your portals, the random calculation is: how many times the strength of the gravitational and magnetical fields of Carbon-14, gives you the speed of the travel, in the dimension of the lines of the transportation of the lines of the fields of the Universe by the order of magnitude.

The speed of light does not come into it anymore. It is like they say, you have a yacht with an engine or a boat with an engine which can do 100 km/h, but they do not tell you, the river you are on is already traveling at 400 km/h.

When it comes to measuring and understanding the transportation through the dimension of the portal, or dimension of the soul of the man; in so many ways the dimension, multiple of Carbon-14, fits directly to the soul of the man.

In a way, you travel nine times by speed, to the direction of the position. And then you can tighten it, by the order of magnitude. We are not talking about the speed of light. **The speed of light does not exist, it is only in the matter state.** And it does not go through phase-change.

Somebody said we go through another dimension and I explained that very simply. When you travel with the speed of sound you break the sound barrier, as you go through it. The aircraft with a pilot, does it change on the other side of the sound barrier? Does it become a different aircraft, or does it become a different man?

The sound barrier is again a magnetic field compression - even we call it air compression. Air is made of magnetic fields. So, when the man goes through the speed of light in the matter state, would he come out to a new dimension? Or as we pass, every time does the pilot become a donkey, and the plane becomes a monkey and everything else changes, every time we pass through?

We come to understand - we have found a way, a measuring method. A way to be able to roughly guess, what speed we are going to go, where we are going to go, and where we have set the dimension to the amino acid strength of the soul of the man, to land down where we want to be. We move the man through the strength of his soul.

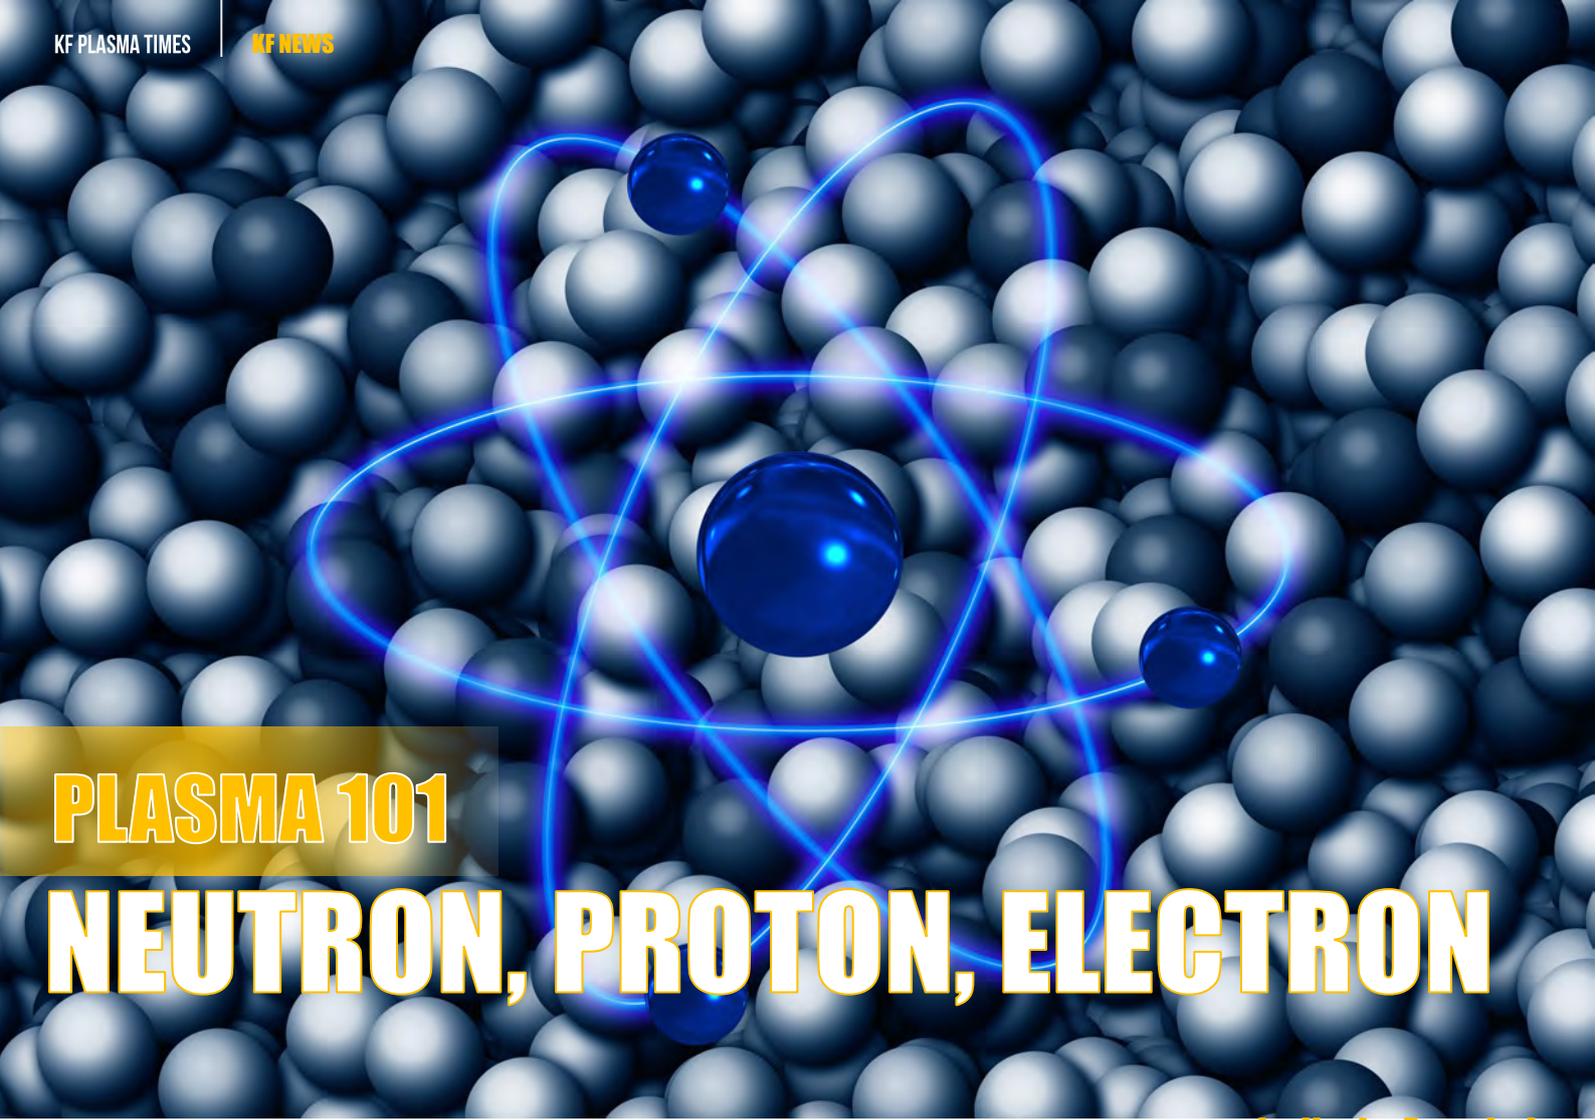

Now we understand the process, now we start learning how to make the framework. You have to make a common denominator framework, which allows and respects not only the soul of the physicality - if you want to go in the dimension of physicality - but it respects the soul of the man too. A strange thing is that not many creatures have this combination to be able to travel the span of the Universe. Now you see the advantage of being a human. Very, very few races come to this combination.

Now we start building a framework. We start putting new rules, new dimensions.... which is actually CH₃. Then you understand, how close man is to be able to become the passengers of the Universe. (...)

Those of you who understood, those of you who maybe understand in the future, I have already understood, and you have already entered to produce the portals. But be careful when you do. What did your mother say when you were young and you went on the street? "Do not speak with the strangers, and do not every time go out, come back home with a cat and a dog." How many of you had that? "Mum, it is the last, last cat I ever bring. I promise you that." Now we open you the portals, who is going to turn up, and how would you make the confirmation and the process of the soul level, which you have invited? What does this mean to you, those of you who were hoping that something might pop out of the jackpot?

Q: "So, using Carbon-14 within ourselves, is a result of conduct?" I think that is when you mentioned super-conductivity. Is the use of Carbon-14 a result of conduct? It is kind of a play on words, but maybe it is true?

MTK: What a beautiful day. We do not leave guesswork, it is understanding and understanding the knowledge, comprehending the totality. This is what it is about. It is about total existence.

PLASMA 101

NEUTRON, PROTON, ELECTRON

by Keshe Foundation

This is to understand the difference between the matter state and the fields of the motion of the Universe, as we call the plasma of the Universe. Still, the matter state is part of this structure of the motion, but in a lower strength because it has done all its interactions. In nuclear physics, it is called nuclear decay. Why does it decay if it still has the same energy? It decays to be able to sustain the next life by splitting itself and annihilating itself. It has chosen characteristics of the field difference, that it splits itself to a neutron and a proton. What happens in the cycle of an electron? The electron again divides into sub-electrons. The man has not gone that far to be able to see it yet. Life does not end as an electron, as a package of energy. Life splits.

“The electron is powered by proton energy, inside the neutron environment. So is the soul physically energized by the central soul in the Universe.”

We all are energized at different levels, once the structure is complete. When the soul of a man is created it has a full spectrum.

Different parts of the soul of the man interact, take shape and function from different strength of the Universe. What does this mean? You have the soul of the man, we try to show it as a plasma.

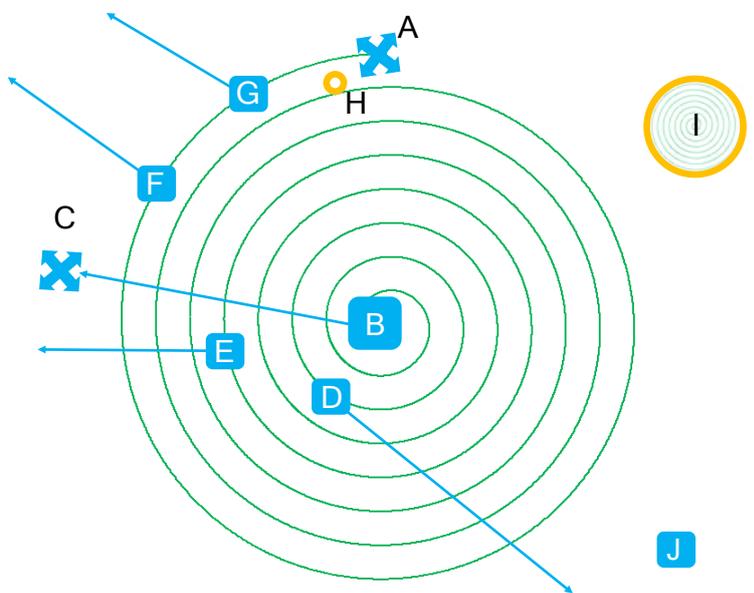

Figure 1

The soul of the man, at this point, manifests itself as a physicality (Fig 1. A). At this point (Fig 1. B), it is at the strength of the soul of the creator because it has dictated its position (Fig 1. C). The soul of the man, in part of itself, is dictated by the soul of the Universe. (Fig 1. D) The soul of the man, in another part, is dictated by the strength, by the soul of this galaxy. (Fig 1. E) The soul of the man is dictated by strength, by the soul of his Solar System (Fig 1. F). The soul of the man is dictated in strength by the soul of the planet (Fig 1. G) which has created the man.

In essence, a man carries all the strength of the creation. But, he is not aware of it because the only thing he sees is at this level (Fig 1. A). We carry the full dimension because, without B, D would not have been there. And, without D, E would not have been there and so forth down the spiral. The life did not start from point A down the spiral to point B, the life started from the strength of the creation, from point B up on the spiral to point A.

The size of an atom (Fig 1. H), on this galaxy, on this Universe, is dictated by the Central Line of the Universe.

But, the size of the atom (Fig 1. I), in another Universe has a different strength and it is a different size, which means it has different package energy, it is like another virus. Can man exist when he moves from one Universe to another understanding the difference or does he prepare himself to mutate to a higher strength?

In essence, this outer atom still has the same strength, as the soul of the creator in common.

What you call electron is a certain amount of packages of energies, which the condition of the central gravitational field force of the galaxy dictates (Fig 1. J). The same is, the soul of the Creator decides on it, and the galaxy, and the

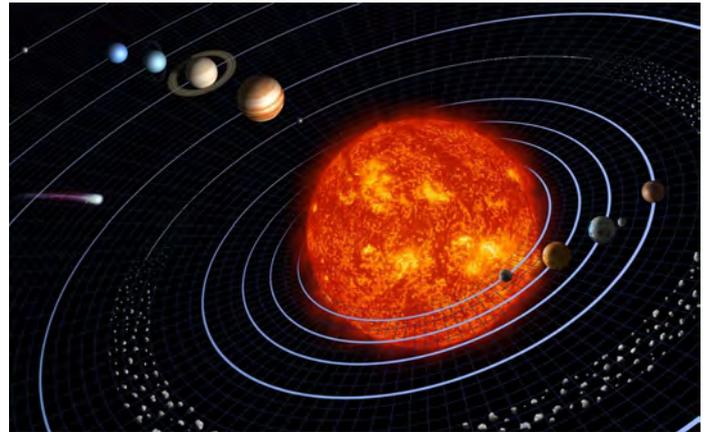

Figure 2

Solar System, and the planet. In essence, it has to have a given size, which dictates, what essence of the soul, or the field of the central point. Otherwise, it would not take its position from it.

If you look at it, (Fig 2. 1) is the soul of the creator. Then, you have the soul of the Universe (Fig 2. 2). Then, you have the soul of the galaxy (Fig 2. 3), you have the soul of the Solar System (Fig 2. 4), you have the soul of the planet (Fig 2. 5), and you have the soul of the man (Fig 2. 6). Each one of them has a say and dictates the position. Each one of them moves the same.

It is the same with electrons, the same as the planets. The position of the gravitational magnetic field of the Earth is not dictated only by Sun and Earth. It is dictated by Magrav positioning, of all these, with respect to each other, and to the Earth.

It is the same, with the soul of the man, and the dimension of the soul of the man. We are part of the totality even though we are made as part of it by the field strength, by the interaction of the fields. As the soul of the creator shines out, it leads to the creation of the soul of the man, to the dimension of its strength, to be created. So, did the Sun, in creating all the planets, in its Solar System. There is no difference! It is just the man who wants to make the difference for him to look more educated. Saturn would not exist if there was no Sun. And, it would not be in this position, if there wasn't Jupiter, and the Earth, and all the other planets. You take the Earth out of the equation, Saturn will be in a different position. It is the same as the soul of the man and the creator.

There is no soul of the man if there is no soul of the creator. In the condition where it is, in the strength, in essence, in the center, it carries the same strength, because it came from it. It dictates by its fields. It has to have part of me in it. The galaxy adds its part to it. The Sun and the soul of the creator, in the creation of the Solar System and in the creation of the man have exactly the same function but in a different dimension.

What is in the Sun leads to the creation of the Sun, the Earth, the Moon, Saturn, and everything else. So is the essence of the soul of the man, leads to the creation of everything else including the soul of the man, which came from the dimension of the tangibility of physicality of itself. Then, what is the dimension of life in a man?

There is a fundamental understanding in the world of science. I take mankind to the point of understanding the totality and if you read all the three books you will understand something very fundamental.

We are all in our age, we have come through a number of symbolic names, but what do we understand about the history of these symbolic names? What is the truth and how do these entities exist, what is the measure of them, what is the reason of existence of them? Why are they the same on Earth than they are on the Moon and when we follow what we created, we see the same entity adds up and exists on Saturn and in other matters of the galaxy?

One of these things which exist but has never been explained in the world of science, especially in the world of physics. The creation started with the motion of the magnetic fields. Fields like lines that are just straight things until they interact with another field then create friction of fields and then they become vortexes, they create friction, they create residual and then we are coming into the world of physics. The physics in two or three physical things in the energy level, gravitational magnetic field level interact, we get chemistry and then more of them becomes biology.

One fundamental point that we all have accepted, most of us did. We consider that all the people who are listeners of the Keshe Foundation Knowledge Seekers have been and heard somewhere about electrons, about protons, about neutrons.

"I refer to it freely, I am a nuclear physicist, it is my blood, it is my essence. I feel the nucleus, I can see the motion and emotion within it. It is like a glider, he can feel the direction of the wind, he flies into it, he plays with it, he flies across it. It does not exist, but he feels, he has a sensation of the motion of the fields. A nuclear physicist who understands its sciences is very much the same. We fly within the

structure of a nucleus, we feel the motion of the fields." When one does this, when one teaches the world of nuclear, the world of science of plasma, it will leave many people behind because they do not have that finesse, they do not have the understanding. To them it is just electron, they say something and then you have a proton and a neutron.

"There is a fundamental question to ask from the scientists at this conjunction. This is a question I have put to many nuclear physicists, it is a question I have put to many world scientists and nobody has managed to answer and when I explain it to my understanding, it unravels the secrets of creation."

We say in the world of knowledge seekers coming here, that we have an electron, we have a proton and if I ask you what an electron and a proton is, many of us are baffled with it. And in so many ways if we can work in the dimension of the existence by size-wise, what we will see is a very interesting point.

In so many ways, we do not see this. This (Fig 3. A) is an illusion, but we know of its existence because of other things which we do, and we know it is correct. The nucleus (Fig 3. B) is a magnetic field boundary of two entities entering and interacting. The balanced field between (Fig 3. E1) and (Fig 3. E2), represented by (Fig 3. C) which is very much equal to the energy of the electron, creates a new dynamic (Fig 3. D). This is why an atom exists. This is why an atomic structure exists.

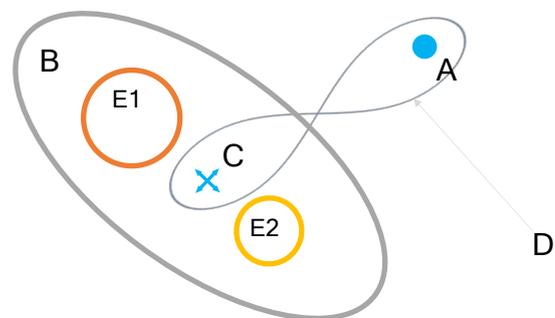

Figure 3. A: Electron; B: Nucleus; C: Balanced field between E1 and E2; D: Dynamic field interaction; E1, E2: Entities

If we understand the history of the creation of life in the universe, when we say we have an electron, a proton, a neutron, if you understand that is the neutron which is divided into two: proton and electron, then you understand very simply (Fig 3.

E1) has an electron and proton energy in it. When it comes to balancing with (Fig 3. E2) and with (Fig 3. D) it creates a point of interaction and that is why we have an atomic structure.

There is an electron balance between these two (Fig 3. E1) and (Fig 3. E2) which is in a way in opposite field flow as the electron (Fig 3. A) which was created by the division of the other. This is the first time we can understand how, when we say an atom of deuterium exists, scientifically we understand why.

“The reason I explain this, in this way is that when it comes to building your gateways, your portals, your motion of your soul and floatation in the dimension of the universe if you do not understand this, you come to be in a big problem. But up to now, no one has ever explained the phenomena, the understanding and the history of the creation of the physical structure and how these physical structures lead to the creation of elements; how these elements stay in a field dimension or they stay in a matter state depending on the inertial mass of their environment.”

Now that we understand how the atomic structure is created, now we understand in a further point how multiple molecular atomic is created. This is deuterium.

What about when we go to the next step and we add two neutrons and two protons? Now we see how the electrons manifest themselves. When we go to multimolecular atomic, beyond two and three neutrons and two and three protons, we see why it jumps to another secondary ring, sp1, sp2, etc. which the scientific world explains.

If you look at the first one (Fig. 3), with one single proton and one single electron had a space gap. But now look at the space gap in (Fig. 4). These all have to accommodate themselves magnetic-gravitationally. The equation changes. The electrons move further and then the more and more you add as protons and neutrons, the field expands. The size and the dimension expand.

Now for the first time, we understand the world of creation as bundles of magnetic fields which they try to accommodate each other and then the screen widens. The volume of neutrons, protons,

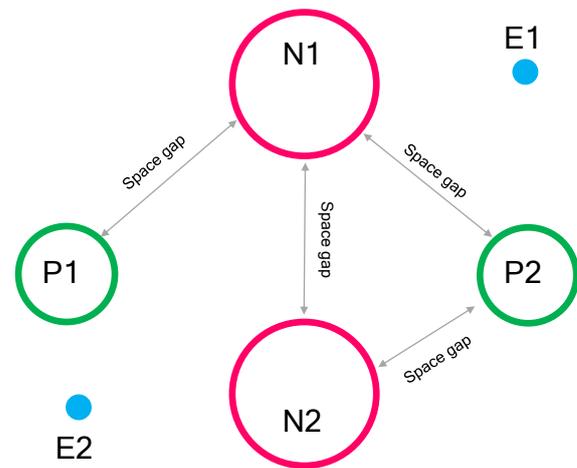

Figure 4. E1, E2: Electrons; N1, N2: Neutrons; P1, P2: Protons

and electrons widens and they are dynamic, they do not stay in one position, they move continuously to accommodate the other plus the fields which are lost and gain to the environment by each one.

The dynamism starts. In some cases, the matching electron-protons need the bigger the space gap because they are entangled, they get locked and cannot move. You find these gaps where neutrons come in and then you get, so many protons of what it used to be; for example 5 plus 5 of each and it creates the atomic mass and the number now it gave 5 plus 6 of the other. The number of neutrons starts increasing and increasing, and you find different dimensions and different isotopes.

“None of the world of science, no scientists up to this point has put this question which I put to my professors and many of my colleagues in the world of nuclear and atomic some 40 years ago. It was put aside because we could not answer it. Now that we have entered the world of existence, the world of universal community, the world of universal transportation, we cannot put it aside anymore. The world of science, the world of physics, this scientific world has to answer this question:

We accepted the theory of the electron, proton, and neutron. In any combination of the mass of this, we add up in blocks, other neutrons or neutrons combinations. On Earth we get Zinc, on Moon we get Zinc, on planet Zeus we get Zinc, in this Universe. But the unanswered question I put to all of you to think.

Why all the electrons have the same size and gravitational magnetic field approximately? Why all the neutrons have the same and why all the protons have the same?

How come a neutron created out of the splitting of another structure which itself now is the mother, now splits into another electron and a proton, creates the same size mass energy electron in every dimension of this universe? There is no God sitting there scaling: yes, this is the size of electron energy, we keep it there; yes, this is the size of the proton energy, we keep it there; yes, this is the neutron; and that is it. There is nobody making a big dough and cuts it.

What dictates the size of an electron, the amount of mass of energy in an electron, this size and the mass in this planet, in the planet Zeus, in the galaxy of the mass of a proton? And they are all roughly by about 10% up and down, the same. There is no scale, there is no cutting machine in the universe."

What phenomena dictates this amount to be an electron and whenever you split a neutron you get the electron, it comes on its own and it comes with a proton. The most fundamental question to ask in the world of physics is **who has dictated, what dictates the mass, the size and amount of energy of a neutron which is more or less within 10 to 15 percent gravitational magnetic field mass across this universe?**

The world of science has never answered this. This is why physics is something beyond the reach of many people because the fundamental cornerstones of the creation of this knowledge have never been explained, never been understood to be explained. Mathematicians come up with all sorts of formulas but what is the formula of an electron? What is the structure that an electron on Earth is the same as an electron in mass-energy, in motion and speed as in any other place in the Universe?

What is the volume, what is the mass of one electron? How come electrons are all of the same anywhere in the universe, in this universe? Where in other universes of the Unicos there could be different and the size of, the energy of, the speed of, could be slightly different for those universes which are closest to the Creator.

"In the world of physics, the physicians, the fathers of the physics, when they explained there is some-

thing called the electron they just left it. No one has ever opened it. Nobody has ever discussed it and blindly we have accepted it."

The energy the amount of fields which is within one electron, if you understand the connection of it to the other electrons, and other protons, and other neutrons in this universe, then you ask a simple question: "We are not asking what is inside electron, I am not asking what is inside a proton, I am not asking what is inside a neutron. I am asking a simple fundamental question. Why all the electrons are of the same within the proximity of 10 to 15%? We do not find an electron the size of a neutron in the atomic structure of the copper that will be different for the zinc or will be different for plutonium. What dictates the fundamental size, the cornerstones of the creation of these entities in our universe?"

If we go in a bigger dimension, in the plasma of the solar system, put on the screen how many names have they made for things which they assumed to be inside the plasma a proton. Whatever they have come up with, with different names we call it Earth, we call it Moon and we made it so sophisticated, we made it so elaborate that now we made it impossible for anybody to understand.

"When you look inside all these fancy names they made about what is inside a nucleus... I tell you what is inside a nucleus. There is a center of energy called the Sun and the fields around it interact and imagine how many quarks and qorks and everything else has been made. Every quark is a Moon, every other quark is a planet, then everything else those fancy little things we call it asteroids and meteorites.

Now we have put the facts of science on the table. The quarks, one of them up quarks and down quarks, we call it the Earth and the Moon and the other upside-down quarks we call it the Saturn. There is no difference.

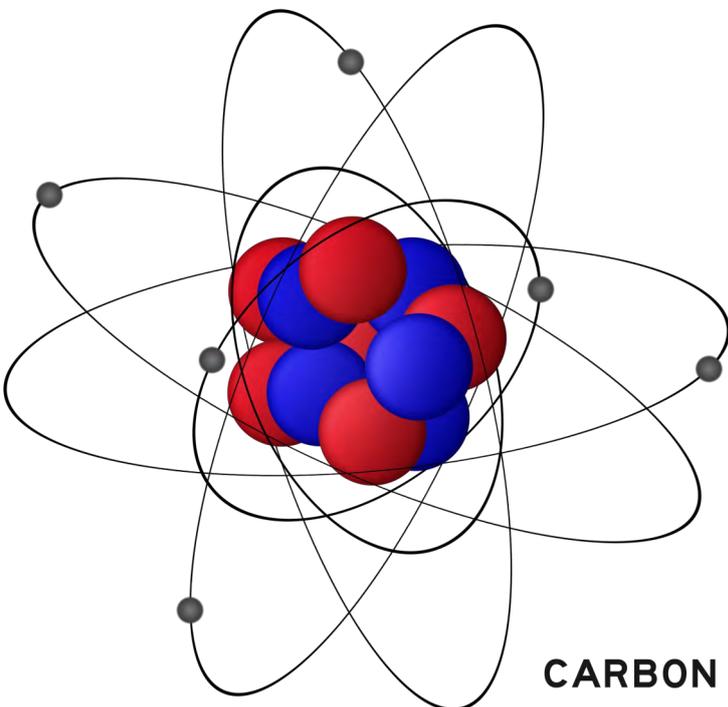

"Now we understand the science, we understand the totality of the world of physics from basic, now we have to address it. It is the job of scientists, especially physicists. Not theoretical physicists. Theoretical physicists have a habit of putting things down and they make a mess of it.

We see the plasma of a proton, we see a plasma of a neutron, we see the plasma electron. And now for

the first time, we have opened the structure of these entities: the plasma. All these fancy words of quarks and up quark and down quark and a lot of other things which in my nuclear education time I laughed at them, I have never prepared to accept it and I was told theoretical physics it is a backbone of the physics and I said the theory is wrong, so I carry on with my own.

The theory is very simple what is in macro is in micro and reverse. The Sun, the solar system is a plasma, is a neutron. In time it will divide when the center cannot hold on and in our solar system, our Sun will split. From it come others and those others will be exactly in the same ratio as the ratio of neutron and proton and electron division coming from the neutron itself. “

Up quark we call it Earth, down quark is called Mars, the funny up quark is called Jupiter and the funnier one which is a little bit dodgy is called Saturn. And all other bits which are flying in there are meteorites and ice belts and the moons. If we can explain how the Earth was created and how the Jupiter was created and how these icy belts on the edge of the solar system and around different moons and planets have created, then we have found the answer to all these crimson and quarks. Change the name of the quarks to Moon and see how quarky the Moon and the Earth are.

It is time to open the science that every man understands the simplicity of it, the truth about it.

“What dictates the size of that solar system which we call electron? What dictates the size of that solar system which we call proton, that across this universe wherever we look with our new science and depth of the telescopes we have created, we say planets so and so has Zinc in it or it is made of Helium because in a matter state gravitational magnetic field we see the characteristic of what we see on this planet as Helium so we assume that it has got two electrons, two protons, and two neutrons. The measure, the size, the structure of the electron on this planet and there is the same.”

This is part of the space technology if you want to travel the dimensions of this universe. **What dictates the size of the electron which is the same in any point in this universe? What dictates it to have a motion of clockwise or anti-clockwise?**

What dictates its speed? Is the speed of the electron in a Hydrogen the same as the electron in the outer boundary of Plutonium? The world of science has not answered any of these yet because they cannot, they never brought the subject of the table. It has been pushed aside. They do not know we can play.

It is one fundamental question and one fundamental answer which you need to find to be able to open the doors of the universal community, the doors in the knowledge of the universe. That is not Carbon-14. Carbon-14 is made of 7 Deuterium.

Your question, what mankind has to answer, what has dictated the gravitational magnetic field and the size of that neutron, proton, and electron in that deuterium. Do you want to travel in a spaceship the size of Deuterium? Do you want to travel in a spaceship the size of a neutron? Or you want to travel in a spaceship the size of an electron? Can I fit into that or can I by proportions build the system that can travel with the speed of electron beyond the speeds of Lights in the dimension of the Carbon-14 structure of the universal field and travel the span of the universe in no time?

This is the cornerstone of the question of the physics. This is what we need to answer. Why all the electrons which come as a natural break up of

a neutron, are the same size and in different elements take the same position and are the same across this universe? Who cuts them? What forces dictate the size of them?

We accepted blindly that a neutron divide into an electron and a proton. **Where did the neutron come from?**

“We accepted fundamentally that the neutron divides into electron and proton, we call it the nuclear decay. Fundamental nuclear decay I put in the Book 1 – The Universal Order of Creation of Matters. What dictates the neutron?”

When do enough fields come together to know that they are the size of a neutron, that it makes enough fields that its division can lead to the creation of an electron and a proton in such a mass? Or is it gravitational magnetic field replication within the structure of the central line of this universe, which dictates the size of these three elements?

We cannot become man of universal transportation when we do not understand where our fuel is coming from.

How is the path of the work of the universe set?

We are on the tenth floor we think in knowledge of the matter, but this building has no foundation. Nobody has built this for us. Nobody has brought to tell us what condition dictates that so much magnetic field become a neutron. What is the mother, what is the measure, what is the reference point that all the neutrons on this universe are all the same or near enough within 10 to 15 percent of magnetic field gravitational mass?

These questions turn the world of physics on its head because we have to answer it. If we do not answer it if you do not understand it, if we get away from all there quarks and everything which is getting worse.

Can they define, can they tell us how a neutron has actually come to take shape out of the energy gravitational magnetic fields of the Sun? Or the Sun of the universe, the essence of the creation of the Creator. This goes back to the fundamental principle of two things. What we call black holes and one now understanding the principles of the gravitational field

forces and at the same time the ratio of the interaction of the fields of the universal plasma. Which means the stronger plasma feeds the weaker plasma for it to reach is balanced fields. This brings a very big question in the creation of the Black Holes which we see physically in part of the universe due to the creation of its own Nanostructure and its own absorption.

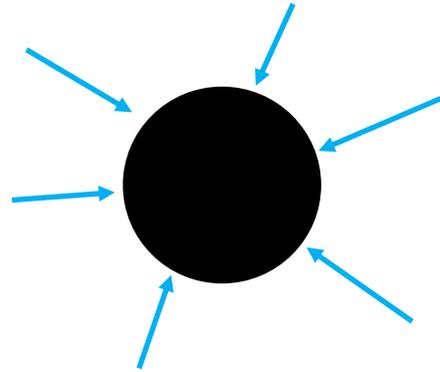

Figure 5. Black hole attracting from its surroundings.

The black hole pulls through to its gravitational field forces everything in its surrounding. In a way, this is correct because it has assumed to have a huge combination of fields which are negative to their environment. That is why it is pulling. (Fig. 5)

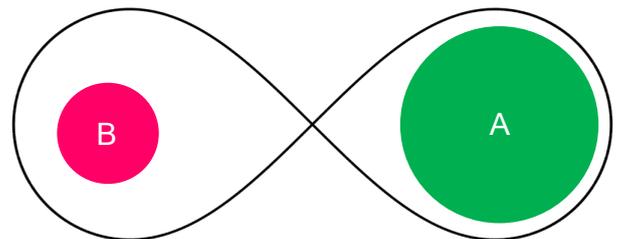

Figure 6. A: Big plasma; B: Small plasma.

When we have a small plasma and a big plasma (Fig 6.), the big plasma shares its fields with the small one to bring it up to its balance and builds this up in field energy. The big plasma becomes the feeder and this the small plasma starts absorbing very small.

Does the black hole absorbs and takes everything in from the universe, in its environment due to its heavy fields which are opposite in direction of their environment or is it fed by a bigger black hole? When we speak about the plasma are we talking about the work of the universe. If this is so much that

it absorbs, it is it possible that the center of the black hole is a single element of deuterium?

Which through its strength it is so weak enough that through the magnetic gravitational field of the universe in his environment, trying to be fed, it becomes absorber of the bigger field. And the interaction of layers and layers of fields create that illusion of darkness.

When the fields are in the motion and they interact with the others we see radiation of fields coming out which is, in fact, this essence of the creation. Black holes are not all absorbing but some of the frictions, some of the energies reflect. It is exactly like our Sun.

If we do not understand, we cannot take off, we cannot fuel ourselves, we cannot understand suddenly we are a proton and the field measurements or the field force of this universe dictates at a point in a condition that it is needed to add an electron to it or divide itself to another electron.

An electron, a proton and a neutron what we see, what we absorb is at a matter level of the strengths of the observation of the man. The Neutron in giving and taking energy from its environment has divided into an electron and a proton. The size of all three of them is divided by something in the universe because wherever you are, in planet Zeus or Earth, this size is always the same. When we observe the planet Zeus, we see six of protons and six neutrons, we say that the planet has a carbon. It must have the same mass ratio structure.

If this plasmatic-magnetic field called neutron, in receiving and giving, in balancing with its environment divides into an electron and a proton. The proton and electron follow the same proposition. What does the electron divide into? What does the proton divide into? Whatever they divide into, what phenomena decide their size in the sub matter, sub plasma level.

“These are the questions which the world of physics, the physicists have to answer. It is the principle work of people like me to put these on the table, try to make you understand what dictates this and then what is going to happen in understanding these things. What happens to sub matter level electron, protons, and neutrons, because I made a

“mother” out of the “mother” and what happens now to the new “mother”? And the strange thing is where did the first “mother” [neutron] come from?

We have created the condition in the dimension of the matter strength gravitational magnetic field that anywhere in this universe in the presence of the field effect of the environment we manifest in a matter dimension. This means every electron in this universe is the same.

The proposition of its creation comes out of the division of the neutron or the collective mass of entities are continuously created in our universe which in sizes is an electron, a proton, and a neutron, and they come together and establish an atomic structure.”

This turns the whole of physics upside down. We assumed, we have made so many theoretical physics assumption and completion that the neutron decay has led to the creation of an electron and a proton. Does this universe lead to the creation of a specific tree size plasmatic packages that in them coming together they can stay as a matter level of one atom?

We need an electron to create and expands dynamically that in its existence we create that non-tangible field only without manifestation of elements. In the world of medicine now we call it RNA is created in the same, where the DNA is the structure of the electron, and proton and neutron.

In the interaction of the three, neutron, proton, electron why do we have three? If you understand this and understanding that that free plasma creation comes to existence, isn't that the replication of amino acid?

How many different measures of this amino acid has come together to lead to the creation of life and intelligence across this universe and the universes to come?

“It is for us to take this step better. This is for us to start telling these scientists misguiding us, enough is enough. In the fundamental reality of the science of physics, we have to address before we can go to the next step before we spend billions of dollars making these things to collide and splash and then we say we found the origin of the universe.”

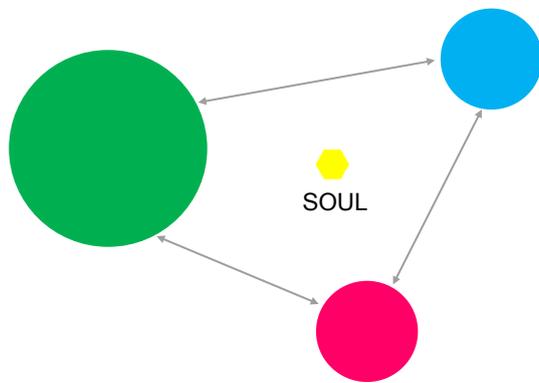

Figure 7. Three plasmas of different sizes interacting and creating the soul

The origin of the universe is within us, is part of our existence, it dictates every cell of us in this atomic structure.

If the existence three plasmas, in different sizes, led to the creation of a field force with that dimension, the soul, is the physical existence connected to a three-dimensional field balance?

What and where in the universe dictates that all the electrons, and all the protons, and all the neutrons in this universe would have this measurement? There must be a replication field transfer which allows this or there is a size of dimension of the fields which at a given point manages to encircle itself to a plasma world which with reference to a central line gravitational field of this universe each sized has a fixed dimension and then it comes to the question why only three? Are there other entities bigger and smaller than a neutron that man has never considered?

We do not look for the respect of some people who think they know more. We look for respect of the man for himself to understand more, to be able to answer these questions in the depth of the space.

“What did your mother teach you before you leave home? I teach you how to iron and I teach you how to cook that when you're on your own, you can look after yourself. In a way, I have brought you in the kitchen of the universe to teach you how to cook and not how to be fooled by some cooks that they sell you a fish as a steak and you taste and say what a beautiful steak. “

The world of science has to be in the heart of every man because it is the science which has built the

man and not the man which has built the science. We become mathematicians, physicists, chemists, biologists, and professors because nobody explained the fundamental basic understanding of the creation. No one has a master.

We are educators of the universe and we are good in our jobs.

Mankind and the knowledge of the man in the level of education of the man have touched, have to touch and must touch the fundamental cornerstones of the creation which is now we call plasma. We have to make the knowledge of the universe the plasma that we understand from the point of birth.

“In the direction and in the understanding of the world of science these questions of today I should have put on the first teachings six years ago. But mankind was not ready. Now mankind is ready because he is so eager to take into the spans of the universe, he has to answer it because you cannot go anywhere without the fuel. And even having the fuel, you cannot travel if you do not know how and the way that fuel responds and how fast you travel the spans of the universe. This time it is not burning, this time is a sliding job.”

During the orange experiment, we transferred the energy, the protein, the taste of the orange into the water. It comes to this point through gravitational magnetic fields which were created in the cup by putting different GANs around it, creating that condition of the orange transfer. Is and has the universe of the man a field transfer level within it or in the boundary outside the universe which dictates what is the orange inside, that filled up the water we drink? Is this how the sizes of the electron, proton, and neutron are dictated? It goes back is this the true essence of the creation in the universe dictated by the position of the soul of the Creator. That itself is made of three dimensions and the interaction of the three dimensions gives dimension to the soul of the creator, or what we see as a fourth element.

Is the life of existence a copy of the life of the Creator? Have you found an answer for who and how the size of every electron in this universe is decided? Is it on the basis of the theory of the Aleks' orange and banana or is it more fundamental, the creation of the field balances within the unicos has set a presidential package for all the universes?

Then there is the fundamental question to ask behind this where did that orange come from? The energy balance level of the universe is divided into three sets of the high speed but small packages, which makes the electron. Intermediary packages of the strength strands of a specific dimension which makes the proton. And a mixture of the strong and small packages and then a big one and the weaker packages which make the neutron.

The gravitational magnetic fields of the central line of this universe dictates the size of energy pack which beyond that opens up and below that it does not exist and within a given field the strength and amount in the package, it makes itself through its dynamic interaction of the fields of the universe, in condition and interaction with the matter state inertia which is created to manifest itself as a neutron. The neutrons do not see, the neutron is waiting to divide to have an electron and a proton otherwise the universe will be full of neutrons waiting to divide.

“The universe continuously produces packages of electrons, neutrons, and protons that in interaction with each other lead to the creation of an atom. Depending on what packages of energy they come across so many the fields strength will divide and become Zinc, Copper, Hydrogen, etc.

Is the transmutation of the elements reality or the transfer of the fields of the universe according to the condition of the environment leads to the manifestation of the elements and there is no transmutation. If I make a field environment in this area that is equal to Gold any field which passes which has that package would land here.”

“One fundamental point for us in sitting where we are in our knowledge and in our understanding of the macro and micro of the world of plasma, we see the Sun does not throw Gold and the Earth catches it. The Sun creates field packages. If that field package has a space gap strength of the Gold I take, its mine if I am in the right place to catch it because the other side goes to Jupiter or to Mars or to Saturn.”

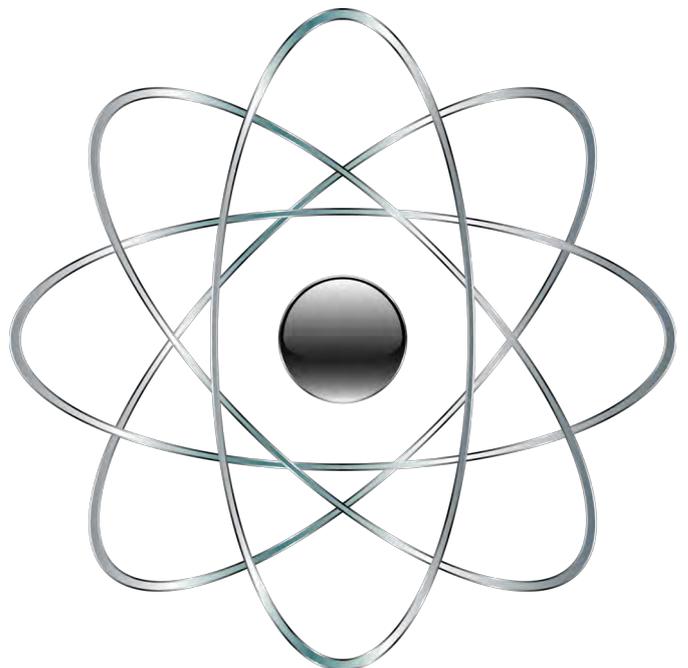

Can we become realistic and understand the totality of the world of science and physics? Because we will, in understanding the world of plasma, build a new science on the correct way

that our future generations can travel the spans of the universe as they can drink a glass of water.

Try to ascertain the interaction of the fields. Why do I feel this? Try to understand if it is impossible how do I feel in my soul and the soul of my physicality and my physicality. And the physicality which I live within. Is the physicality I live within the neutron and my physicality the proton and the soul of my physicality that electron? How do I, how can I interact with it?

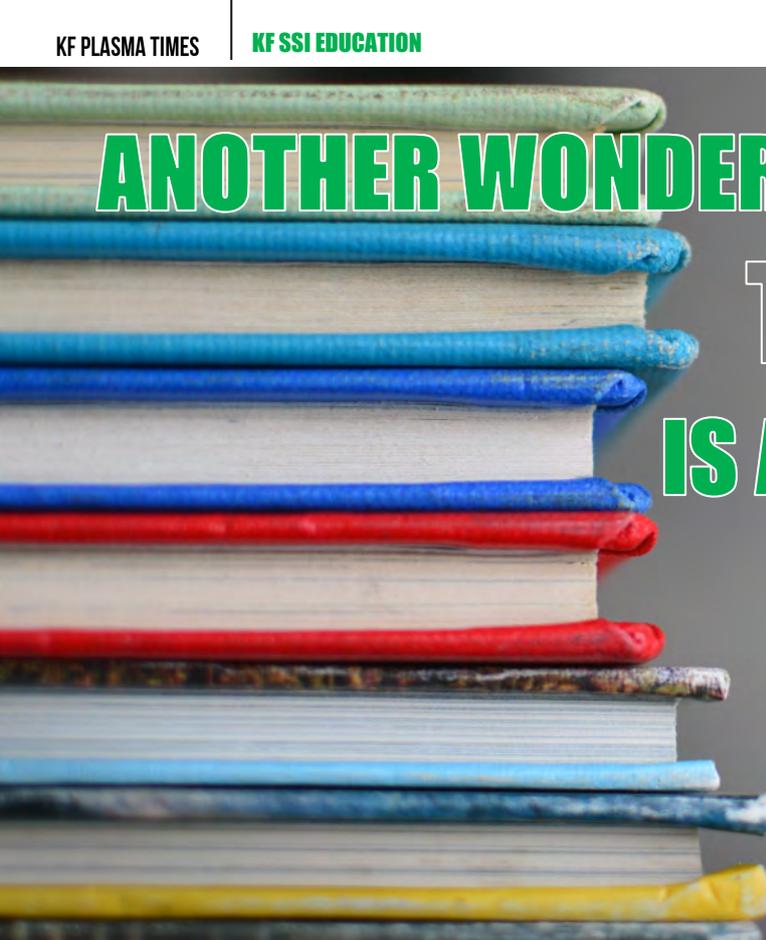

Is the soul of the man so ashamed to take the soul of physicality with himself to the dimension of the universal community that he goes on his own, he does not want to bring the embarrassment with it? Because he goes every night or day and you call, and you call it the dream.

What I put on the table today has to be answered by every single man before every man can become men of the universe, by himself. This is the point where we separate the man and the man. The man of the universe and the man of the village of the Earth. The man who will decide to stand and keeps his next generation on this planet is vulnerable to the physicality of the accidents of this universe and a final point of amalgamation with the Creator of itself which is the Sun.

ANOTHER WONDERFUL

TRIMESTER

IS ABOUT TO REACH

by KF SSI Education

ITS

TERM

Dear students of KF SSI Education and those knowledge-seekers around the world who do not know about our study programs yet as well as those who are close to applying but still thinking what would change if you do, we are glad to announce that first trimester of 2019 will end on the 14th of April and next one starts on the 6th of May. Time here on Earth is passing fast. And the good news is that there shall be no time during our travel in the depths of the Universe.

We congratulate existing students for their enlightenment obtained in the first trimester. If the truth of the world of creation inspired you enough, you will surely be back for more. Most of you are totally familiar with the next paragraphs and the best ambassadors of the profound knowledge you obtained. Still, for your own satisfaction, have a read and feel the joy for how much you achieved up to now.

And the rest of the population, do not hesitate for too long. [Apply today!](#)

We are still holding a large collection of private teachings for you where our top scientist, Nuclear Engineer Mehran Tavakoli Keshe explains the totality of the knowledge from his perspective, enough for you to launch yourself among the stars and become a star.

If you ever asked yourself those heavy questions about who we are, what are we doing here and what is possibly the best reason to be here in this reality on Earth then you definitely need some undoubtful answers or let say at least sufficient scientific base to explore more on your own and finally find your answers.

If you are among those who do not see the beautiful world without peace for all then you are knocking on the right door of knowledge how to bring peace to all and forgive and never forget what humanity did wrong in the past. You need to understand the scientific reason why human behavior goes violent that you could know what to do to bring the change.

If you are curious about everything inside out, your questions are reaching the boundaries of space beyond your imagination, you want to know what is the origin of everything as far as it can go and of course how does it all interact, how much of the world is invisible to us and can still be explained, and

even if you agree that there is lots of knowledge in schools out there somehow your curiosity could not be fed and satisfied, your path brought you to the right spot and there is a reason why you are reading this magazine now.

Or you either want to reach an abundant life on Earth using the most advanced technology with less or no worries about your health and how will this planet end up in pollution but you do not know how to bring a solution or you are losing hope this is possible at all? Or you do not see just the Earth but something pulls you out of Earth atmosphere into the spans of Universe to explore unknown to Man? Do not worry! We have answers for all. And we do not use jet propulsion technology and spacesuits for walks in space. You know why? Because we do not look only at birds. We look at Earth, Moon, Mars, Sun, etc. No rockets. Rocket science is obsolete. Welcome to the Plasma Science. Keshe Plasma Science and Technology that you do not mix up with all plasma sciences available because none will teach you about the spaceship which you need to understand by answering both questions above.

Join us and see the power of change in your hands and by your soul. We are here to serve and not to be served! What does it mean and how does it reflect our lives? Find for yourself. Very likely you will find yourself the purpose you were always looking for but could not define. And if not, you will still end up satisfied that your comprehension of everything improved.

Remember, the Keshe Foundation is a scientific, non-religious, non-profit organization. It is about the right to know. It is about the power of change by knowledge. Jump on your internet surf and chose the right destination: <http://keshe.foundation/education>

We are waiting for you all.
KF SSI Education of Keshe Foundation,
The place where science meets the soul of the Man

PLASMA NECK PAD

/ CE Certified Medical Device Class I

The Plasma Neck Pad uses plasma technology, which is based on the interaction between magnetic-gravitational fields. These fields in turn generate plasma fields, which help to restore balance in the body by reducing stress and, in the specific case, this product reduces tension in the neck, shoulders and cervical vertebrae.

Plasma Neck Pad works for:

- Neck pain and shoulder soreness
- Neck cold
- Cervical vertebral discomfort
- Cervical vertebral stiffness
- Mandibular pain
- Toothache
- Ear ache
- Sore throat
- Reduces acute and chronic neck pain
- Improves blood circulation to soothe aching muscles and joints for recovery
- Increases the vitality of cells and tissues

The Plasma Neck Pad is a Class I Medical Device designed for long use treatment. It has no moving parts or batteries, making it a lightweight, durable, portable and versatile device that can easily be carried. The Plasma Neck Pad, with its ergonomic design, adapts to any neck size, bringing comfort and well-being very quickly. The Plasma Neck Pad is made of neoprene with a Velcro fastener, making it light, durable and easy to install and remove. No plug-in is necessary, and it is adjustable with Velcro straps to ensure a custom fit; that is one size fits all.

Available on:
store.keshefoundation.org/store

USAGE

Wrap it around the neck carefully not too tight and fix in place it with the appropriate Velcro end.

Apply to the neck for 2 to 6 hours for a maximum of 1-2 times a day.

PRECAUTIONS

Keep away from metals.

Keep out of reach of children.

Keep away from electromagnetic sources (radio, TV, mobile phones, PC, etc.).

Do not apply:

- to the neurological part of the skull (brain)
- to internal organs
- where there are infections
- to patients with high fever
- to open wounds
- to pregnant or lactating women
- near metals or electrical implants / devices (even inside the body such as metal implants), including pacemakers.

NEW FARSI

(PERSIAN) TEACHINGS

How we came about starting the Farsi teaching?

Well, I usually do not think about starting anything. I like to dream about things that I love to do or be in. This was one of my dreams, that we can have Farsi teaching and many more opportunities for the Farsi speaking community. Getting involved with plasma technology especially since the man who brought it comes from the same land.

Then everything started by itself. I asked Hassan and at the same time I was in communication with Shahrzad - the story of getting to know her happened more than a year ago; that by itself is another story. It seems everything has started two years ago or at least the foundation of it started two years ago. And when it started, it was like magic.

~ Azar

In 2012, I was working with an international group of global warming, a short program of Mr. Keshe shown in terms of carbon dioxide. And in 2016 there was another show of the same group from the Keshe Foundation.

Because of my husband's illness, in trying to save him, I tried to make contact with the Keshe Foundation. But I found it too late to process the condition with GANS. And then, in Mr. Keshe's teachings, I found that there are some conditions that have been planned for thousands of years. I have experienced a romantic life and that same love taught me to share it. It was a guide to my husband's loss to pursue this course of instruction in Keshe Plasma Science and Technology. And now my whole life is the science of plasma. I decided not to miss a loved one because of some condition without knowing the science of plasma. After a while, I was much interested in the philosophy of plasma science. I started translating some videos into the YouTube channel. In this way, a group of interested seekers called me and formed a group that was very active.

Hopefully, we will be able to extend the plasma science to Iran next to one another.

~Shahrzad

Public Teachings in Persian/Farsi
آموزشهای عمومی به زبان فارسی

<https://www.youtube.com/playlist?list=PLpCKWzA-bp9vQ1JhGZISkVyRZgVOIY569>

It was in early December when Azar mentioned about going to Iran and make a workshop. In this workshop, the intent was to teach the alphabet of Keshe Plasma Science and Technology and how to make the Magravs device. Soon after, she talked about teaching online on January 14th, 2019 as a startup, idea which was followed with Mr. Keshe.

As enthusiastic as I was about it, I was also nervous because it is a big responsibility and I wanted to be able to serve and deliver the Keshe Plasma knowledge the way it deserves, with all the hard work Mr. Keshe and Keshe family put into it.

So, I dedicated all my time to learn more, to learn the tools to deliver and be a speaker. As the session started I felt a birth as my mic opened and I began to speak. I let go after a few minutes and I let the knowledge flow. I felt a connection with my audience although I was sitting thousands of miles away. I felt the energy poured into me.

By the time the session was over I was so much energized that I could not sleep until late that day. I felt the connection even stronger.

In the second teaching, Iranian participants were so enthusiastic. If there were 28 attendees when asked to raise hands if they have questions, there must have been 56 hands up, what I have not seen in teachings in English. I pray that I excel and learn more to be able to teach more and not to be a lead to knowledge. I feel soon we are going to have them [the students] teaching, which is my goal.

~Hassan

I have been following the Keshe Foundation Farsi workshops for the last few weeks. In my opinion, the teachings are being done very well and Mr. Hassan (who has been performing [hosting] them) is doing a great job.

The quality of the teaching is high, and the subjects are explained very well. It is important to understand that plasma science is complicated in its details and it will take some time for the students to grasp the essence of it. Therefore, a sophisticated team is required to support this teaching. I am glad that responsible people from the Keshe Foundation are assigned to perform this task and I will try my best to support them as well as the Farsi speaking students with the best of my abilities.

~ Parviz

Unusual interactions over physical matter

through the magnetic plasmatic fields of **IRON**

Introduction

In the present times, in formal education systems around the world, the fundamental idea of the field is being taught in a very incomplete way, which is limited to physicality. Thus, in classical/nowadays physics, the idea of fields defines a region in space in which every point has a determined measure/unit associated with it.

In the modern framework of quantum field theory, a field occupies a space, contains energy, and its presence hinders a classic "true vacuum". In classical physics the field is a form of matter, through which the interaction between particles takes place. A particle creates a field around itself and a field interacts over another particle.

With a much higher understanding, in Plasma Science, the field represents a plasmatic reality which defines a certain plasmatic condition of the space in which that field is manifested. Plasmatic interactions take place through the fields. The manifestations of magnetic plasmatic fields can be situated on different energy levels, much higher than the ones of the physical matter (or physicality, as it is known in Plasma Science).

This is why only a part of these phenomena is visible or measurable in current physics, which only accepts and studies the limited area of matter state. Magnetic phenomena (as we know from the physicality) are only a particular manifestation of

the plasmatic magnetic fields at the strength of the physicality.

Although this is a different approach than the one of modern physics, it is perfectly applicable, with objective results. This brings it an exceptional value; this is why it needs to be approached without any prejudice and with an open mind.

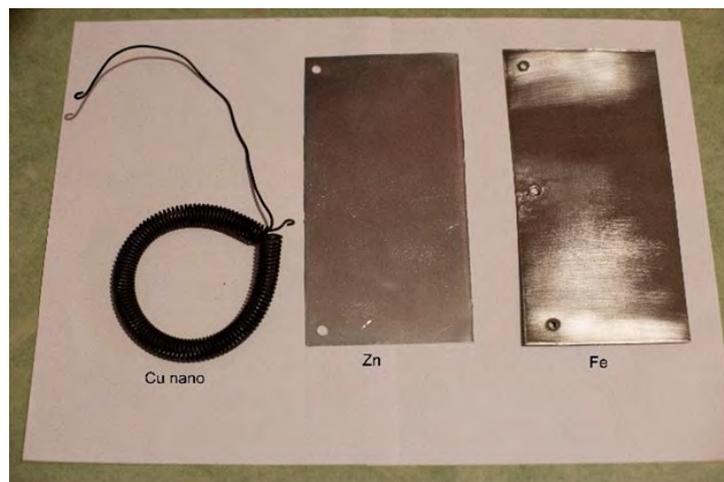

Figure 1. Materials for the CH_2 GaNS reactor.

Practical results of Plasma Science prove, for example, the existence of fields that can magnetize any kind of physical object. In the experiments that were shown since 2008 (Keshe, 2008), Mr. Keshe proved the existence of a form of ferromagnetism with visible manifestation in the case of a simple piece of plastic.

Ferromagnetism is the most frequent and powerful

type of magnetism in physicality. According to modern science, in normal conditions, only some of the metals have ferromagnetic properties: iron, nickel, cobalt and their alloys. These metals can be either attracted by magnets or they can become permanent magnets by magnetizing them. Other substances react very weakly to the action of the magnetic fields of physicality, under the action of two other forms of magnetism, such as Para magnetism and diamagnetism, but the forces that are manifested in this case are almost unnoticeable/insensible. (Wikipedia, 2019)

Figure 2. Tying two pieces of metal together.

As we know, through the interaction of galvanized iron and nano-coated copper we can create the CH_3 GaNS. By creating a certain plasmatic condition, the CH_3 GaNS can be reduced to Deuterium (H_2) GaNS. Another procedure of creating Deuterium GaNS is to reduce the CH_3 GaNS to CH_2 GaNS. The resulted GaNS will have a connection with the Iron which is used in the GaNS reactor. Magnetical and Gravitational fields of Deuterium GaNS that was produced by this method have a specific composition, being connected to the fields of the Iron. Thus, they carry the behavior of the Iron. This means that Deuterium will react similarly to the Iron in the presence of a magnet. What we need to understand is that this transfer of ferromagnetic properties is mediated by magnetic plasma fields. For the modern science it is difficult to overcome the strictly limited vision/understanding which links ferromagnetism only to aspects of physicality, such as the quantum mechanical spin. With all that, some very simple experiments can bring clarity upon the reality of the action of magnetic plasmatic fields over the magnetism of the physicality.

reactor is a specific way to obtain CH_2 GaNS rapidly. For this, use 10% salt water. Inside this reactor place a nano-coated copper coil or plate. 12-14 cm away place a double-metallic piece. This piece consists of a Zinc plate and an Iron plate (a very weak/low steel alloy) that are clean and have the same shape and size (Fig. 1).

One can obtain a single piece of metal by uniting tightly the two pieces of metal together. For this, we can use a few plastic cable ties - as in Fig. 2.

Then, connect the Nano-coated copper coil/plate to the negative (-) pole of a DC power source and

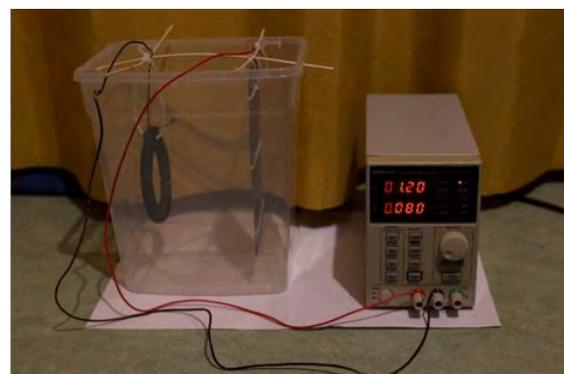

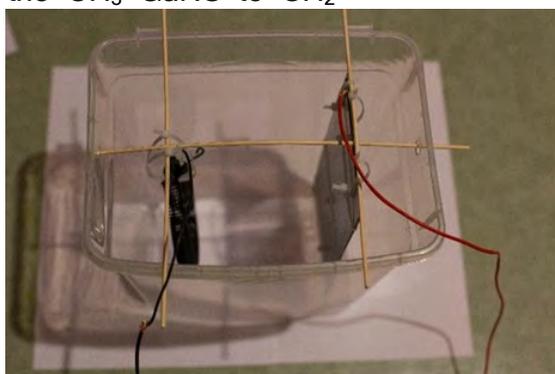

Figure 3. The CH_2 GaNS production setup.

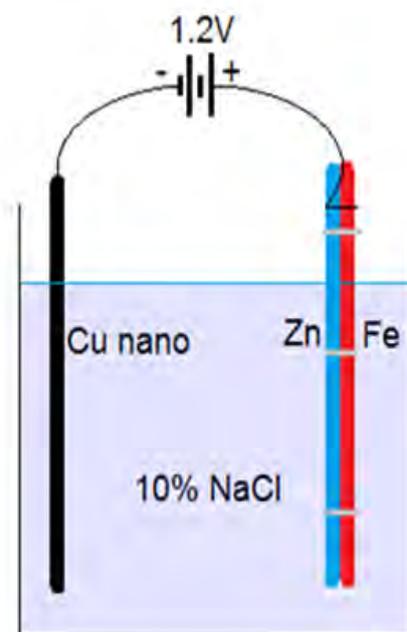

Figure 4. The CH_2 GaNS reactor.

The CH_2 GaNS Reactor

One can start by setting up a very simple reactor for the creation of CH_2 GaNS. The setup of this

the double-metallic piece to the positive (+) pole of the DC power source - as depicted in Fig. 3. One can use a copper wire to make the connections.

Subsequently, power up the GaNS reactor with a DC current of 1-1.2V and 80-150mA.

You will notice that this reactor (Fig. 4) produces ZnO GaNS in the first few days, sometimes in very large quantities. Then, the ZnO GaNS production will turn into a black GaNS. This is the CH₂ GaNS. We collect it separately and we store it in a hermetically sealed glass jar.

To further explain, there are several processes in this GaNS reactor:

1. The Nano-coated copper and zinc produce the ZnO GaNS;
2. The Nano-coated copper and iron creates the CH₂ GaNS. This phenomenon occurs due to the water electrolysis, which lead to the formation of hydroxyl ions HO⁻ near the cathode (the Nano-coated copper). Having a high affinity to hydrogen, they capture hydrogen for the formation of the CH₃ GaNS. Then, in this reactor, the CH₂ GaNS gets created.
3. The ZnO GaNS formed in the CH₂ GaNS reactor, gradually shifts to the strength of the CH₂ GaNS.

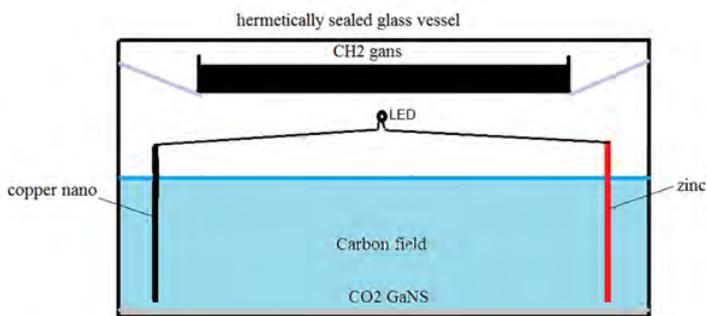

Figure 6. The Deuterium GaNS Reactor.

The CH₂ GaNS Reduction

Use a glass container and set up a CO₂ GaNS reactor in it. Inside this glass container, in its lower part, place a Nano-copper coil/plate and a zinc coil/plate, connected through an LED.

WARNING! For hanging these metal parts inside the reactor, use only glass hangers fixed to the inner walls of the reactor.

They can be made with the help of a glass blower. Inside the glass container, on top of the Nano-coated copper and zinc coils/plates, place a smaller container with a wide opening. This container is

also made of glass and it contains the previously obtained CH₂ GaNS. Similarly, the stand for it needs to be made only of glass. Hermetically seal the big glass container with a glass cover and silicone. Use the silicone on the outer side of the container, only.

Inside this glass container, in the interaction between the Nano-coated copper and zinc coils/plates, the Carbon field is created. This behaves as a magnet for the Carbon inside the CH₂ GaNS structure. In the smaller glass container above the CO₂ GaNS reactor, one obtains the Deuterium GaNS.

Plasmatic reduction using a magnet

Collect the Deuterium GaNS that was produced, which has a black color. Get a ping-pong ball and fill it with this liquid Deuterium GaNS (using a syringe). Then hermetically seal the ball and place it between the North and South poles of two magnets, which will generate a powerful process of energy extraction, after which the Deuterium will lose an atom of Hydrogen and hence the difference between the Deuterium and the extracted Hydrogen is one neutron.

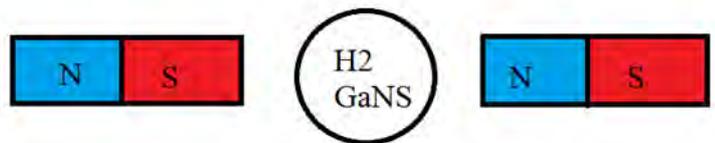

Figure 7. H₂ GaNS reduction

This is one way to obtain the plasma of a neutron. This process may take several weeks. You will notice that the liquid from the Deuterium GaNS container disappears/reduces. The ball will be almost empty, with small traces of Deuterium GaNS on its inner side.

Ferromagnetic phenomena induced through the plasma fields of Deuterium

When you take a few small sized neodymium magnets you can notice that the empty (Deuterium) ball has ferromagnetic properties as it gets attracted by the neodymium magnets. The ball is attracted by both poles of the magnets, same as a piece of Iron. One can observe that over time, the ferromagnetic properties of the ball become more and more powerful.

Figure 8. An empty ping-pong ball obtained by the presented method, which has a powerful ferromagnetic manifestation.

In my experiment, I surprisingly noticed that one can use this ball to lift more than 100g of magnets that get tightly stuck to the ball. This phenomenon cannot be explained though the assumption that inside the ball, some ferromagnetic powder result-

ing from the drying the GaNS of Deuterium, has remained. Simply, the dry material that remains inside the ball, on its inner walls, is in a small amount. In modern science no ferromagnetic material is known to exhibit such a force of attraction.

We can observe an amazing phenomenon by cutting this ball in two halves. It will instantly lose all its ferromagnetic properties. This proves to us, without any doubt, that the observed phenomenon is not caused by any alleged ferromagnetic powder remaining inside the ball. *Its ferromagnetism is caused by powerful plasmatic magnetic fields captured inside the ball.* The source of these powerful plasmatic magnetic fields can be the fields of the plasmatic neutron inside the ping-pong ball.

Another way to experiment

Get a piece of wood of the length of 5-10 cm. Then fill in a small glass bottle with Deuterium GaNS. Put the piece of wood inside the bottle and leave it like this for a few days. Then extract the piece of wood and let it dry. It will remain impregnated only at its surface with dry Deuterium GaNS. Then one can use a knife to peel this piece of wood to obtain smaller pieces - 2-3 mm thick. As we get closer to the center part of the wood, you get more perfectly clean pieces of wood. By placing a neodymium magnet close to these wood fragments, you will notice that they have ferromagnetic properties, as they get attracted by the magnet. As we (normally) know, wood does not have ferromagnetic properties. The only explanation for this phenomenon we have concluded, is that the wooden material stores plasmatic magnetic fields of the strength of Iron.

PLASMA TO THE RESCUE: THYROID NODULES

Anamnesis

A woman, 46 years old, diagnosed with thyroid nodules (Fig. 1). The escalating symptoms have caused concern and led to the diagnosis of the health condition, as shown in Fig. 1, included in the Supplementary Materials section. The main conclusions from the ultrasound scan were:

- Thyroid size (right lobe: 15x13x43mm vol 4.6ml, left: 17x12x47mm vol 5.2ml, crevicular throat),
- Small thyroid gland, with a total volume of 9.8ml lobes,
- In the middle and lower parts of both thyroid lobes, several well-defined nodules (the largest with dimensions of 11x8x9mm on the right side and 15x14x7mm on the left),
- Thyroid parenchyma with a clearly heterogeneous, hypoechogenic structure, fibrotic, with slightly increased vascularization,
- In the submandibular region, single reactive lymph nodes of size 24x8mm on the right, and 26x6mm on the left,
- Ultrasound picture as in the course of post-inflammatory changes (Hashimoto's disease). Thyroid gland for ultrasound control.

Balancing Process

The balancing of this case was done by drinking Liquid Plasma (LP - water collected from above the GaNS) and wearing three bracelets with LP and couple of drops of GaNS (CO₂/ZnO/Iodine, CuO, and CH₃ respectively). The application of patches with Liquid Plasma took place after the second test, which confirmed the return to normal parameters.

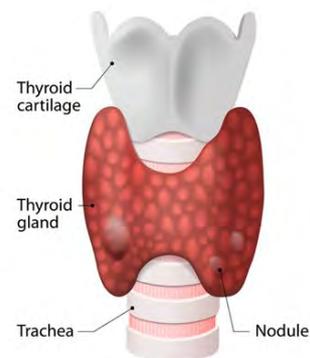

Figure 1. Thyroid nodules.

Oral Application of LP

- Liquid Plasma and amino acid of CO₂ GaNS - taken daily in any amount,
- Liquid Plasma of Iodine GaNS - 100ml, three times a day,
- Liquid Plasma of CuO GaNS - 100ml, three times a week.
- Liquid Plasma of CH₃ GaNS - 100ml, three times a week.

CO₂ and CuO GaNSes have been prepared using the traditional method (CO₂: Nano-copper and zinc, in 5% saline solution, CuO: Nano-copper and copper in 5% saline solution). Iodine GaNS was prepared using the caustic soda method using crystalline iodine, 99.8% purity. The Liquid Plasma of each of these GaNS was prepared directly by the user, through the field interaction process, in the absence of direct contact of the GaNS material with water. A small ampoule with GaNS is submerged in a bottle or jar filled with clean water and left to interact for a minimum of 24 hours.

Health Patches

The patches were prepared in a ratio of approximately 3:1. Each health patch contained 50% of the Liquid Plasma of CO₂ GaNS + couple of drops

of GaNS, and 50% of the Liquid Plasma of Iodine GaNS + couple of drops of GaNS material. As reported by the subject, the recommended balancing of the thyroid area (patches to be placed around the neck) was carried out after the second test, confirming the return of parameters to the norm.

Results

After 6 weeks of balancing the body using Liquid Plasma, there was a noticeable improvement in well-being. The symptoms subsided and the positive course of the whole process was confirmed by another ultrasound examination, carried out 7 months after the first examination. Plasma balancing took place shortly before this second USG scan. The full diagnosis is contained in Fig. 2 in the Supplementary Materials section. The main conclusions from the second scan are:

- Non-enlarged thyroid gland (right lobe: 11x11x22mm vol. 1.5ml, left: 10x11x28mm vol. 1.8ml; non-measurable beam),
- Total volume 3.3ml - below the standard.
- This test does not show the previously described focal lesions,
- No enlarged lymph nodes around the thyroid gland
- Conclusion: Ultrasound image of the thyroid gland as post Autoimmune Thyroiditis.

The circumstances of the described health problems are best described by the person concerned: "The diagnosis was quite accidental - around 8 years ago, the nodules were tiny. After a few years, I began to feel bad, so I went to the doctor. I had very high blood pressure, shortness of breath, a feeling of palpitations, I was very hot and had bursts of hot. The doctor recommended that I do all my thyroid's and ultrasound tests again. What later turned out to be that the nodules got very big and I was told to do a biopsy as soon as possible, and the blood test results also pointed to something nasty. In the meantime, the doctor prescribed tablets, which I still take today. (...) Processing lasted six weeks and (then) I made an ultrasound, and the rest you already know, the nodules have disappeared."

To confirm the complete resolution of the original problem that was diagnosed through the second ultrasound (autoimmune thyroiditis), it is appropriate to perform additional tests in the form of antibodies against thyroid peroxidase (anti-TPO) and antibodies against thyroglobulin (anti-TG). The results of these tests will be sent in by the author as soon as they are available.

SECOND TRIAL INVOLVING 30 PIGS' REVERSAL AND PREVENTION OF THE AFRICAN SWINE FEVER

TRIAL DESCRIPTION

THANK-YOU LETTER FROM THE KNOWLEDGE SEEKER

1. TEST BACKGROUND

The success of the first two trials of treating the African swine fever by Keshe Foundation, has attracted the attention of relevant department in pig farming sector in China.

1.1. FIRST TRIAL

In the first trial carried out by the Keshe Foundation, the GANS plasma technology was applied on a pig which for 3 months was suffering from the ASF. In this case the farmer was supplied with the GANS plasma water and applied it accordingly to the received instructions. Within 3 days, the first signs of recovery were observed and within 7 days, the pig did not show any signs of the fever and entered full recovered (full case documented in Appendix A).

1.2 SECOND TRIAL

The second trial demonstrated the successful reversal and prevention in pigs infected by the ASF, treated within the first two days of detecting the condition. When the symptoms of vomiting and lack of appetite were first discovered by the farmer in his small 30 pigs' farm, the GANS plasma technology was immediately administrated by him. The farm was located in the highly infected ASF area and the farmer is one of the knowledge seekers, following the Keshe Foundation. He contacted the Foundation and requested help, and so the GANS materials were immediately delivered to him. The pig farm and all the pigs were immediately sprayed and watered, by the farmer, with the revolutionary GANS plasma water. The farmer immediately noticed the stoppage of the spreading of the virus to the rest of his pigs and after two weeks of not observing any symptoms of the virus, he manage to sell his pigs on the market (full case documented in Appendix B).

1.3 THIRD TRIAL

Following the success of the first and the second trial, the Keshe Foundation kept the Chinese government officials informed and aware of their achievements and requested for a larger test trial, this time to be observed and controlled by independent observers and officials. In mid-January, the Keshe Foundation was notified by the leading professor appointed by government, to be ready for an 80-pigs test trial. In response, the Foundation prepared materials ready for this trial case.

A meeting with industry experts was arranged by the National Security Department. After explaining in detail, the principle of plasma technology to eliminate viruses and the process of applying the plasma technology, the professor arranged for the Keshe Foundation to visit a farm, belonging to a large pig company in China, which was infected by the ASF virus. The professor and the CEO of the company in writing confirmed to the Keshe Foundation that in one of their farms, a number of pigs were tested positive for the ASF. The professor and the government officials requested the Keshe Foundation to undertake a larger than originally planned trial, involving 829 animals. The Keshe Foundation representative, together with the afore-mentioned professor, the CEO, the general manager and the team of technicians and farmers, attended the infected farm on Saturday, 19th January 2019. This farming company, in 2018 bred and sold more than 2 million pigs. The professor informed the Keshe Foundation officials that the company lost thousands of pigs in the past months since the out-break of the virus in China, which has had a serious impact on the company's business.

On attending the farm by the Keshe Foundation and the management of the company, the process of reversal and prevention was immediately implemented. It was then left to the management, the workers and the technicians of the company to observe and document the outcomes of the initiated process. The Keshe Foundation visited the farm the following Saturday and the company was happy with the outcomes.

After 14 days of the start of the trial, the Keshe Foundation and the management of the company met on the 28th January, in the presence of the Chairman, at the headquarter of the company. Based on the success of the initial trials, the company requested from the Keshe Foundation to provide materials, for the prevention of the ASFV and the Blue ear virus, for one of their mother pig farms, where they had positively identified the ASF virus. The GANS water material for this purpose was delivered to the company on February 3rd and was applied on the cohort of 1000 pregnant pigs. At the time of compiling this report (13th February), the Keshe Foundation has not received any reports from the company on any losses or cases of infection on the farm.

2. VIRUSES 2.1 AFRICAN SWINE FEVER VIRUS

African swine fever virus is a large enveloped double stranded DNA virus that is the sole member of the genus Asfivirus within the family Asfarviridae (Asfar = African swine fever and related viruses). African swine fever virus is the only known DNA arbovirus and is transmitted by soft ticks of the genus Ornithodoros. Virus strains are distinguished by their virulence to swine, which ranges from highly lethal to subclinical infection. Virus strains can also be differentiated by their genetic sequences, and various virus-encoded genes, including P72 (also referred to as P73) that can be used for genotyping the virus; however, the genomic diversity of the virus in the nature, remains to be thoroughly characterized. The genome of African swine fever virus contains a unique complement of multigene families.

2.2 PORCINE REPRODUCTIVE AND RESPIRATORY SYNDROME VIRUS

Porcine reproductive and respiratory syndrome (PRRS), also called Porcine Blue Ear disease, is a highly contagious disease caused by porcine reproductive and respiratory syndrome (PRRS) virus. Concomitant as lower reproductive, difficult breathing and blue or purple ear, and causing other infectious diseases are its main characteristics. Porcine blue ear disease virus is a single-stranded RNA virus, which lacks a corrective mechanism in the process of viral infection and replication and produces a high mutation rate of offspring virus. The mutation rate of PRRS is 1,000 times higher than that of other DNA viruses, 1 million times faster than the mammalian genome.

3. INTRODUCTION OF THE NEW SCIENCE AND TECHNOLOGY BY NUCLEAR SCIENTIST M.T. KESHE

A new discovery and understanding

The new GANS plasma technology of the Keshe Foundation was developed for deep space virus applications and as reported on in this document, successfully resolves the AFS and PRRS virus cases.

In collaboration between the Keshe Foundation's and the South Sierra Leone University's scientists, through testing and confirmation of the effectiveness of plasma technology in Ebola virus trials in Africa, it has become clear that the new space plasma technology is very effective when dealing with viruses.

Up to now, the world of science had problems in understanding the operation, working and effects of viruses on human and animal cells. Modern medicine developed antibiotics to deal with the infected cells, but we never fully understood the working of cells which are infected by a virus. Plasma science educates us that we have to look at viruses as energy packages which link and attach themselves to organic cells and until all the energy of this energy pack is used, the signs of the virus will be present in that cell in the human or animal body.

The new space technology by the Keshe Foundation, through the application of plasma energy packs produced by the GANS material, has the ability to deplete the energy of the virus that attached itself to the amino acid or to the cell, by creating a condition that causes the virus to immediately disappear from the affected cell.

Where, the energy of the virus is now in much weaker strength is delivery to the GANS plasma which does not bear any strength of the original virus. Where the virus energy is broken up into a weaker field in the GANS plasma.

With this depletion of the energy from the virus, the virus lives behind damage cells which can lead to secondary infections and at the same time, due to the depletion of the stronger strand of the virus, the energy which remains in some cells, behaves and becomes the second weaker virus in the energy magnetic field strength, which affects the RNA of the animals. The weak strand RNA, now manifest itself in some of the weak cells or new cells as an RNA virus, known as Blue ear. The new RNA strand of virus now creates a secondary virus known as Blue ear virus. Then the new strand of virus, attaches itself to new cells and leads to a creation and observation of high temperature and fever, after the first temperature caused by the African swine fever virus.

Continuous application of a new GANS plasma technology with the weaker strength GANS water to match the strength of the Blue ear fever to be fed for the second time to the animals to deplete the energy of the new virus involving to new Blue ear virus and totally eradicate the new virus.

As in the case of the African swine fever, this new eradicated secondary virus leaves some damaged cells in the body of the animal, which these damaged cells lead to the manifestation of secondary infection, as in the same as with African Swine fever, which these new damaged cells leads to manifestation of second cycle of high temperature in the body of the animal.

Therefore, M.T. Keshe uses a third new GANS plasma strength material in the strength of the antibiotic. This third GANS by test in laboratories in Europe supports that this GANS is many times more powerful than any antibiotic, in giving to the animals during the two infections period of the African swine fever and to Blue ear fever in the body of animals will reduce and eliminate the fever.

M.T. Keshe has suggested and showed in the 829 pigs' trial that the introduction of the GANS plasma water to the environment of the whole pig farm building, immediately converts the African swine fever and consequently the manifestation of the Blue ear virus. Usage of the plasma water for infection control in one of the trial groups, overcame the virus and its infection.

The company was advised to provide amoxicillin in the section three and four and that in 7 days, saved the life of all the infected animals in the control groups in the building.

Within 14 days of application there is no sign of the virus or fever in any of the infected animals in the farm house. Prior to the application of the plasma technology, all the animals were showing the symptoms of high temperature and fever.

This is a major breakthrough in the world of science and from this point onwards makes it possible to handle and overcome any viruses infecting animals or humans. The solution is to find the strength of the virus and simply develop a weaker strand of the same strength. So that, as the virus delivers its energy to new GANS plasma water it losses its strength/energy and leaves no signs of the virus. This is a major breakthrough in the world of science and a new understanding of the work of viruses in the space which now is unraveled by the Iranian nuclear physics, expert in the Space plasma technology. The development and application of the new plasma material known as Gas in Nano-state Solid (GANS) was successfully tested in a number of trials in China in the areas of agriculture thus increasing the harvest, and in medical applications of the technology through European-certified health systems.

Notes: It has to be understood, in the GANS plasma technology, the high strength energy magnetic gravitational fields always feed the lower strength magnetic fields of the same, to bring the interaction of the two into balance. Therefore, large amount of same strength always feeds its energy to the lower

amount of the same strength. Therefore, in viruses, the virus energy pack has to find a matching field in the amino acid spectrum strength to be able to interact and lock into one of the elements of the amino acid. (O or H, N and C). Understanding that all the elements of the amino acid of every cell are not of the same strength explains why the viruses can attach themselves to different animals or humans and only affect certain animals or species and cannot cross to other animals.

The second aspect which can now be answered is that now that the higher strength of the virus strand is consumed, the weaker strand attaches itself through the RNA strength, to the stronger element of the amino acid of the protein. In that process, as it is closer to the stronger element of the protein, the exchange of the energy of the virus to the protein is less and so this leads to a weaker and less damage to the cells of the body of the animal. Therefore, the animal can live longer life, but still shows the effect of the same virus or the mutation of it, if the strength of the weaker strand of the virus is at the same strength of the RNA as that of the weaker DNA strength. Therefore, the weaker strand RNA energy strength in having the matching strength to the heavier element of the protein, now locks into the animal cell as a weaker strand of the same virus, or similar to another virus strand strength can manifest itself and a totally new virus can be observed.

It has to be understood that in plasma technology when we use the term 'GANS plasma water', this water is not plain water, but it carries plasmatic magnetic fields potential. This means that when we use GANS Plasma water as feeding water or spraying water, it affects the entire environment even several meters around the application area by covering it with the magnetic fields of plasma, and not only the area that is in direct contact with it. The GANS plasma water makes a magnetic, energetic field connection with the surrounding environment and can cover the whole area and not only the area which is watered with it.

Therefore, when we spray or feed the animals, the field of the GANS plasma water spans across the whole body of the animal, without going through the blood or lymph circulation. Therefore the interaction in the body of the animal or in the environment treated with the GANS plasma water is instantaneous. As a result, the effect of the plasma water in the given environment, can last for weeks and months.

4. TRIAL PROCESS

4.1 COMMUNICATION WITH THE PIG FARM TO PREPARE THE PROCESS

On January 17th, 2019, the Keshe Foundation received confirmation that a pig farm infected with the ASFV was found for testing. The initial communication with the Keshe Foundation was to prepare the farm to receive and apply the new material. The instruction was given for the farm to prepare a number of 50-liter plastic buckets, each with a tap positioned at one third height from the bottom of the bucket (Fig 1. - A).

Conversation's translation (Fig 1. - A):

A: Good morning, Director Zhou told me that on Saturday, we will go with you to the farm. Can I know the details of the arrangement? Mr. Keshe wants to stay there for couple of days to see the preliminary test results.

A: We need the farm to prepare four, 50-liter buckets as showed in the picture above, the tap should be positioned one-third from the bottom of the bucket.

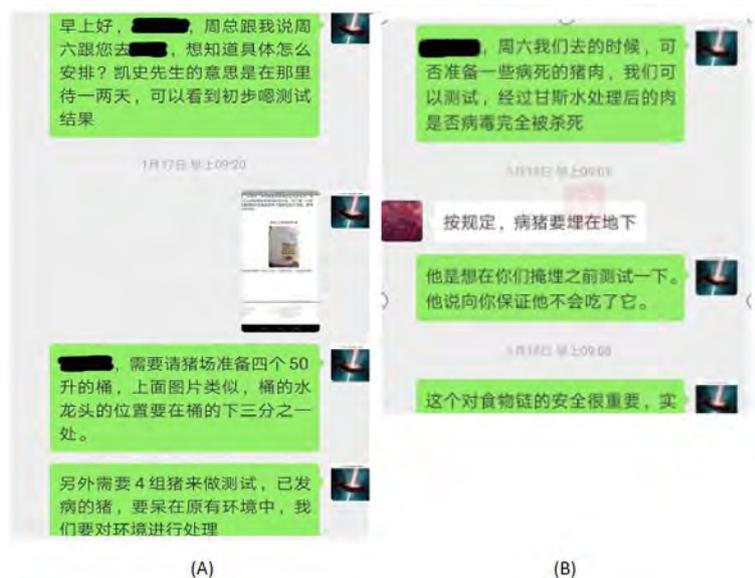

Fig. 1. Conversations for preparing the trial.

A: We need four groups of pigs to do the test, keep the sick ones in the old environment, we need to deal with the environment.

Additional information

In addition to the process and treating the infected pigs, we suggested that the farm can sterilize the flesh of sick and dead pigs with the GANS water to test if it eliminates the virus from the flesh of the animal, which can prevent the infected meat from entering the food chain (Fig 1. - B).

Conversation translation (Fig 1. - B):

A: Is it possible to prepare some flesh from the dead pigs, when we arrive there on Saturday? We want to test if the virus in the meat can be killed by just treated it with GANS water.

B: Sick pigs need to be buried to follow the regulation.

A: He just wants to test before you bury them. He promises that he will not eat it.

A: This is important for the security of the food chain.

4.2 UNDERSTANDING THE SITUATION OF PIG FARMS AND CONFIRMING THE PRESENCE OF THE AFRICAN SWINE FEVER VIRUS

On January 18th, 2019, the basic information on the pig farm was provided to the Keshe Foundation and the professor appointed by the government and General Manager of the company, confirmed that the ASFV laboratory blood test was positive.

Before the onset of the virus, it was confirmed that there were 829 piglets in the farm building. These pigs were around 50-days-old and weighed, on average, around 25 kg. By January 18th, there were about 810 piglets left, as 19 pigs already died in the first 24 hours.

Clinical symptoms began to appear in the farm building on January 16th, and blood samples of 10 pigs were tested in laboratory on January 17th. The results confirmed the presence of the African swine fever virus.

From January 17th, pigs in the farm began to die: 7 pigs died on January 17th, 10 died on January 18th and 19 died on January 19th, before the Keshe Foundation team arrived at the pig house, at 2PM.

Conversation's translation (Fig. 2):

A: Were those pigs checked for the virus before our trial?

B: Let me check.

B: Already confirmed by laboratory means.

A: May I ask how many pigs were there to test?

C: Total 810, sampled test, so it is not exactly certain which pig were sick.

Fig. 2. Confirming the ASFV was detected in the target farm

C: They are piglets, about 50-days-old, weighing around 25kg.

C: There is a building nearby, which also has more than 800 pigs, around 130-days-old, not showing sickness yet. This building needs prevention, very close, just 8 meters away.

C: No, they showed clinical symptoms the day before yesterday, and hence sent the samples to the laboratory to test, the result shows ASFV positive.

B: Should we focused on prevention tomorrow?

C: The process is human isolation, pig pens isolation, and environment disinfection.

C: I think these 800 pigs to do the process, and the other 800 is to do the prevention.

4.3 IMPLEMENTATION PROCESS AND TRACKING FEEDBACK

4.3.1 DAY 1

On site

The Keshe Foundation officials were picked up by the professor and driven three hours to the city near-by the farm. At arrival, introducing the CEO and the General manager and the local stuff of the company.

Mr. Keshe, the founder of the Keshe Foundation arrived at the hotel at 10:30 on January 19th, where he had a meeting with the managers and staff of the pig farm company to understand their situation and he explained the application scheme and principles of the new GANS plasma technology.

(A)

(B)

(C)

(D)

Arriving at the pig farm around 1pm, we observed that one or two pigs were dead in each pen due to the virus and some of them had not been moved out of the pen (as can be seen in some of the pictures below). The Keshe Foundation team immediately took videos and notes of the sick pigs.

Most of the pigs were inactive, we could observe the high temperature from the color from the skin (Bright red color as was pointed out by the staff of the company due to fever). Most of the pigs were huddled together, some pens had the traces of vomit on the ground, and the excrement of the pigs was inside the pens. The smell of the place was so bad that we felt uncomfortable in the throat and lungs after a while, one could smell the death in the farm house. Some pigs were very thin and sick.

In the last picture (Fig 3. - J) on the right, one can see the dead animals were placed in bags for disposal.

(I)

(E)

(F)

(J)

(G)

(H)

Fig 3. Dead pigs in different pens, on January 19th, 2019.

Start of on-site process to reverse the virus

Due to the limited raw materials brought in by the Keshe Foundation - as the original plan by the professor was to process 80 pigs at a different site - we had to improvise to cover as many pigs as we could and at the same time create separate application and control for maximum coverage of the whole pig house of 810 pigs.

Therefore Mr. Keshe decide to divide the whole pigsty into five sections and apply different process to each section.

As in Fig. 4, from the entrance, the furthest 6 pens including both left side and right side, that is pens No.17 to No.22, were labeled as Section 1. The following 6 pens, that is No.14, No.15, No.16, No.23, No.24 and No.25 were assigned to Section 2. The next 6 pens, including No.11, No.12, No.13, No.26, No.27 and No.28 pens, were marked as Section 3. Pen No.3 to No.10 and No.29 to No.36 constituted Section 4. The first pen on the right side of the entrance - pen No.37 - was designated as the sick bay, where all the sick animals from all the pens were isolated before dying. Pen No.2 was designated as the dead animals' storage, with animals temporarily packed in plastic bags.

Fig 4. Division of pens into the five sections.

Sections 1 to Section 4, were isolated from each other by placing a large plastic sheet across the building (as depicted in Fig 5. - A).

Section 1 was then cleaned of any animal waste (Fig 5. - B) and then sprayed with the specific GANS water mixture, labeled as W (collected from the top of the plastic container) with the animals inside. The entire surface of the bodies of the animals located in this section were sprayed with the 'W plasma water' (Fig 5. - C).

(A) Isolate with plastic sheet.

(B) Clean the pig pen.

Then the 139 animals in this section were feed every 6 hours, three times a day, with a GANS water mixture marked as 'F1 plasma water' (Fig 5. - D).

(C) Spraying the pigs.

(D) The GANS plasma Water.

Fig 5. Processes of applying the GANS plasma water.

At the same time, the dead pigs and those with severe symptoms were removed. The body temperature of random pigs was measured (Fig 6. - A), and the pigs which body temperature was tested were marked (Fig 5. - B).

(A)

(B)

Fig 6. Measuring the body temperature of pigs, on January 19th, 2019.

There were 24 pigs in pen No.17, 2 pigs were seriously sick and hence were moved out, with 22 pigs left. The body temperature of the four chosen pigs was 40.5, 40.4, 39.6 and 39.7 degrees Celsius, respectively (Fig 7 - C).

Pen No.18, originally had 26 pigs, with one removed due to sickness, leaving it with 25 pigs. The body temperature of the two randomly selected pigs was 41 and 40 degrees Celsius, respectively (Fig 7. - B).

Pen No.19, had 3 dead pigs and one with a fractured leg, so there were 22 pigs left in total in this section. The body temperature of the two selected pigs was 40.3 and 39.9 degrees Celsius, respectively (Fig 7. - A).

Pen No.20, originally had 23 pigs, one dead animal was removed and there were 22 left. The body temperature of the five randomly selected pigs was 41, 40.5, 40.4, 40.2 and 39.7 degrees Celsius, respectively (Fig 7. - D).

Pen No.21, originally had 25 pigs, no pigs removed. The body temperature of the four selected pigs was 41, 40.4, 39.5 and 39.2 degrees Celsius respectively (Fig 7. - E).

Pen No.22, originally had 23 pigs, there were 22 left after the removal of one seriously sick pig. The body temperature of the three chosen pigs was 41.8, 40.2 and 39.9 degrees Celsius, respectively (Fig 7. - F).

The number of pigs in these 6 pens totaled to 145 prior to the removal of diseased and dead pigs, which left 139 pigs at the start of the trial in this section (Fig 7. - A).

The normal body temperature of a healthy pig is below 39.5, and hence most of the measured pigs showed first signs of fever.

After taking body temperature measurements, both the pigsty and the pig were sprayed, and pigs were fed with GANS water. The blood samples were collected after one hour from the first feeding of pigs with GANS water.

From pen No.17, blood sample of one of the pigs was collected and the test tube number is 674-1-1. The same was done for pen No.18 and the test tube number is 939-2-1. Sample from a pig in pen No.19 has the test tube number 855-1-1.

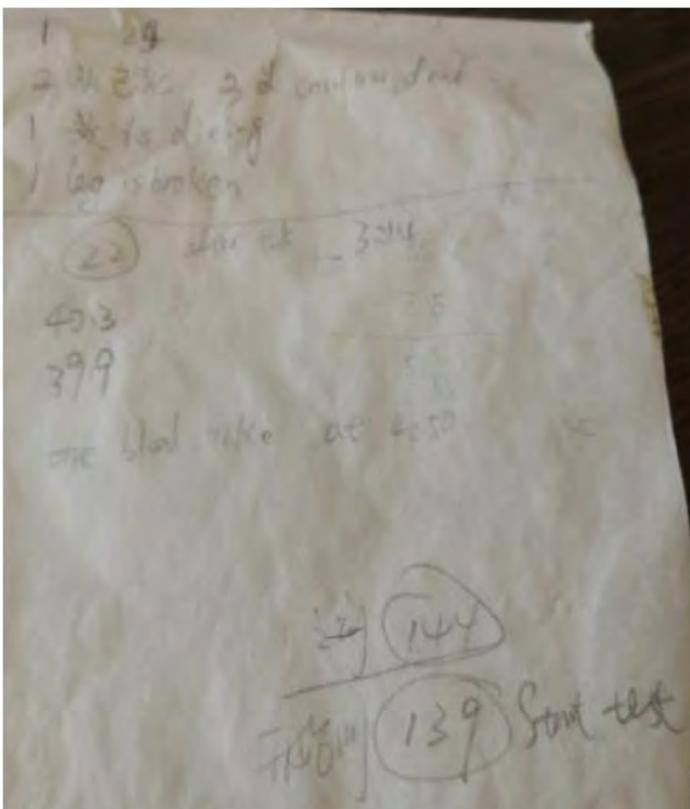

From pen No.20, two pigs' blood samples were collected, and each sample was divided into two parts. For pig No. 1, one blood sample was labeled as 900-4-1, the other sample had 'F1 GANS' water added to it to test the effect of the GANS water on blood (sample labeled as 932-4-1-F1). For pig No.2, one blood sample was labeled as 940-4-2, to the other one 'W GANS' water was added to test the effect of the GANS plasma water on blood. The second test tube number was labeled as 879-4-2-W.

In the pen No.20, one of the pig's blood was collected, the test tube number is 912-5-1.

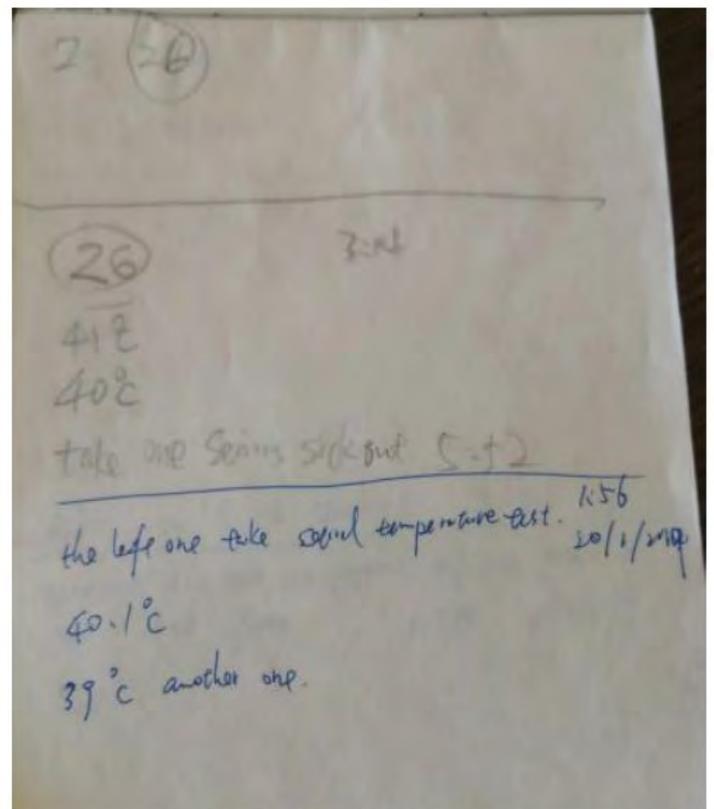

From pen No. 22, one pig's blood sample was collected, and it was divided into two parts. One sample was labeled 953-6-1, the other had 'F2 GANS' water added to test the effect of the GANS water on blood. The second test tube was label as 612-6-1-F2.

Control group blood samples were bundled together, and on the same night, 10 blood samples were placed in a paper box and sent to the laboratory for testing.

As it was explained in the introduction to the GANS plasma technology, it should now be understood that the GANS waters added to a number of blood samples sent to the laboratory for testing for the presence of the virus; the plasmatic fields in these test tubes affects all the blood samples and negative results were expected for the presence of ASF and PRRS viruses.

(F) Pen No. 22.

Fig 7. Original record of pig numbers, temperature measurement and blood samples from the six pens of section one.

On the night, after spraying and feeding pigs with GANS water, the piglets quietly laid down together (Fig 8. - A, B).

Fig 8. Piglets laid down quietly after GANS water feeding.

All the sick pigs from the other untreated areas were moved to the pen No. 37 by the entrance and were sprayed and fed with the 'W GANS water' only.

At this point, the full length of the central corridor was sprayed with the 'W GANS water' twice to change the whole environment of the building.

For the frequent use of the GANS water in tanks, the GANS water needs to remain still for 6 hours for the GANS to settle at the bottoms of the tank. Then the energized water, which gained the magnetic and gravitational field strength of the GANS, is ready to be used for the next batch of feeding and spraying of the farm building.

Due to the large number of animals that escalated from 80 to more than 800, the GANS plasma water production could not fully meet the demand of the pig farm. Therefore, the original water feeding system of the pig farm was turned on after one night, and the pigs drank both, the normal water from the pipes and the GANS water. Therefore, the lack of availability of sufficient amounts of GANS water to feed the animals with, has extended the process by couple of days.

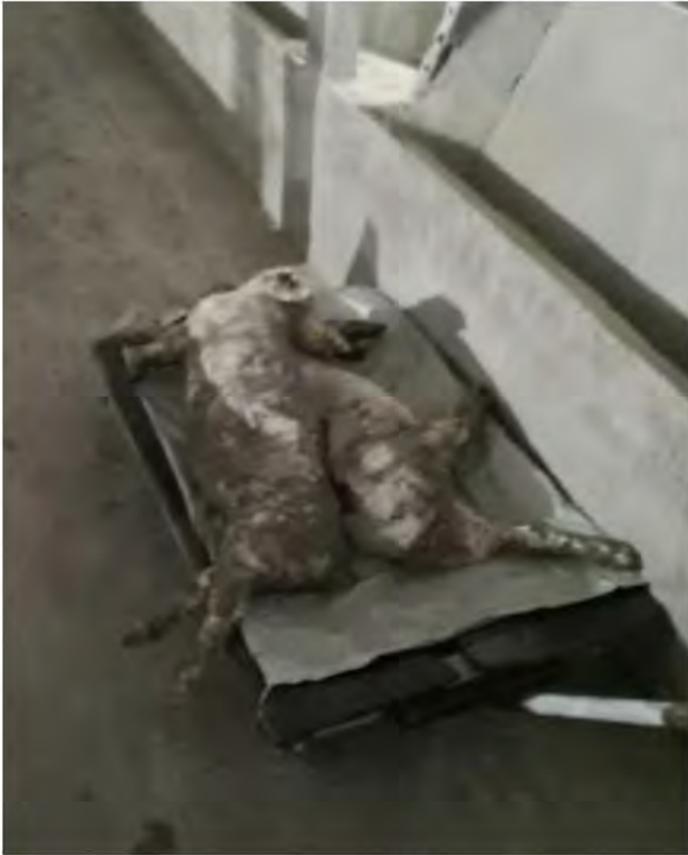

On January 19th, The record was written for the comparison the food consumption in the future that all pigs were fed with 14 packs of food and the Section 1 consumed only 3 packs of food.

4.3.2 DAY 2

On site

At 1pm on January 20th, 2019 the status of the pigs was assessed. Piglets were still dying in untreated areas, but the numbers were lower than in the previous day (Fig 9 - A, B).

The treated pigs in Section 1 were active during the GANS water feeding (Fig 10. - A). The piglets laid still together after drinking the GANS water (Fig 10. - B).

(A)

(B)

Fig 9. Pigs which died on January 20th, 2019.

(A)

(B)

Fig 10. Piglets drank and then lied down after drinking GANS water, on Jan 20th 2019.

Pigs in the sick pen (pen No.37) were very weak and continuously dying.

The body temperature of the pigs on the farm, was continuous monitored during the trial.

In Pen No.17, one pig which was previously tested had a body temperature of 41 degrees Celsius.

In pen No.18, one pig which was previously tested had a temperature of 40.1 degrees Celsius and another randomly sampled pig had a body temperature of 39 degrees Celsius. Therefore, the first signs of the effectiveness of the GANS plasma water on animals started to show in the drop of the body temperatures to 39 degrees Celsius.

In pen no.22 one pig which was tested before, was measured to have a body temperature of 40 degrees Celsius.

One day since the start of the processing, most of the pigs remained feverish and were not yet showing any signs of recovery.

Fig 11: The pigs in the sick pen, on January 20th, 2019.

The test results of the first batch for all 10 blood samples collected on the 19th was reported by phone from the laboratory in the afternoon of January 20th. We were told that for all the samples the African swine fever virus was negative, but what was more peculiar was that the virus reference control samples in the laboratory, had also failed to detect African swine fever virus.

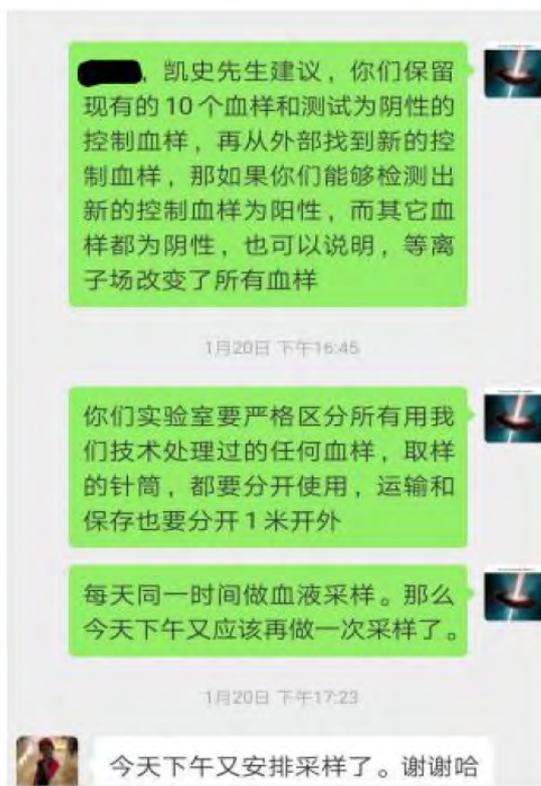

Fig 12: Conversation regarding retesting of the blood samples and keeping them separate.

In response, Mr. Keshe explained (please read the note in the introduction of the new technology in respect to the influence of the fields of the GANS plasma water on its environment) that the GANS plasma depletes the energy of the virus through the interaction of the fields of the water and the virus to GANS plasma water. Therefore, the GANS water which was added into couple of the blood sample tubes has affected the virus present in all the 10 test tubes by neutralizing it. Therefore, in the laboratory tests not only the blood samples shipped to the laboratory showed no signs of the virus but also all the other samples brought together with them, were tested as negative due to the GANS plasma water depleting the virus in all the samples.

The same result was observed in the agriculture section of the application of GANS water, where the seeds watered with the GANS water and the neighboring seeds that were only watered with standard water, grow at the same rate. Only the referenced sample that was 100 meters away, has shown far lower growth than the GANS-watered section. Therefore, the GANS water affects the entire environment of the virus, and not only where it comes in direct contact with it.

Therefore, it is advisable that the subsequent samples for the control group, are kept at all time at a distance of more than

one meter apart from the samples from the treatment group or those that have GANS water added directly to them (Fig 12).

Conversation's translation (Fig. 12):

A: Mr. Keshe suggest that you keep those 10 blood samples and also the control blood and try to get a new control blood sample. If you can test positive for the new control blood samples, and those other 10 samples still keep negative, then this can also explain how the plasma field changed the blood samples.

A: Your laboratory should strictly separate any blood samples processed by our technology, the needles needs to be separated and need to separate the samples during the transportation by a minimum distance of one meter.

A: Take blood samples every day, at the same time, so it is the time to take blood test this afternoon again.

B: Already arranged to take blood samples again this afternoon. Thank you.

The Keshe Foundation team left the farm at 3pm on January 20th, 2019. It was requested by Mr. Keshe to carry on with the processing of the 6 pens in Section 1, and of those pigs in the sick pen - to spray the 'W GANS water' on the pigsty, corridors and the body of pigs, three times a day; also to feed the pigs in Section 1 with 'F1 GANS water', three times a day and to fed pigs in the sick bay with the 'W GANS water' all the times.

On the evening of January 20th, 2019, a weak pig was reported dead in Pen No.17. The dead body was sent to the laboratory to check for the presence of African swine fever virus and for the first time the laboratory confirmed the presence of the Blue ear disease as the cause of death. This confirmed Mr. Keshe's theory of a change of a double strand DNA virus to a single strand RNA virus, where previously there were no signs and no confirmation by the farm or the laboratory of any Blue ear virus case.

On January 20th, 2019, blood was collected again from pigs in the first test section.

Fig 13. One pig died in pen No.17, on January 20th, 2019.

4.3.3 DAY 3

On site

On January 21st, Mr. Keshe on return to Beijing, asked for an implementation of a buffer section between Section 1 and the other pigs, which were not processed.

Therefore, the farming team moved out all the pigs in the 6 pens next to Section 1, to Section 4, this included pen No.14, No.15, No.16, No.23, No.24 and No.25. The floor and the ceiling of these pens, marked as Section 2 in Fig. 4, were cleaned with normal water and then sprayed with 'W GANS water', and also separated from Section 3 with plastic sheets for total isolation.

Because the hog house is a large open space, even though isolated with plastic film, there is no way to completely seal sections of it, as some air can still float between. The personnel multiple times a day walks through all the areas using the central corridor and hence walks between the infected pig pens and the test trial area. Therefore, a buffer section was established to reduce the possibility of transportation of the viruses from one section to the other. Section 2 is sprayed once a day with 'W GANS water' for disinfection and protection.

Every day the central corridor was sprayed three times a day, with 'W GANS water'.

The instruction was given by Mr. Keshe to create a third section to test the effect of the different GANS strength on pigs. The farming team separated six more pens adjacent to the Section 2 and isolated them with plastic sheets. This section covers pen No.11, No.12, No.13, No.26, No.27, and No.28 and was marked as Section 3 of the trial area (Fig 15 - A, B).

In this section, the procedure was slight different and involved spraying the pens once a day with the 'W GANS water' to neutralize the field of the viruses, and at the same time once a day spraying of the pigs' body and feeding them with the 'W GANS water' (Fig 15 - A, B).

The total numbers of pigs in this section at the outset of the segregation was 131 pigs, after moving all the sick pigs out into the sick pen and washing the pigs and the pens with the 'W GANS plasma water'.

The breakdown of the number of pigs in each pen was as followed: 18 pigs in pen No.11, 23 pigs in pen No.12, 21 pigs in pen No.13, 25 pigs in pen No.26, 22 pigs in pen No.27, and 22 pigs in pen No.28.

Fig 14. Empty disinfected Section 2.

Conversation's translation (Fig. 15):

A: Tomorrow, please move out the pigs in the 6 pig pens of the third section, and use our 'W GANS water' to disinfect it, and choose 60 to 70 pigs in good condition, send them back to 3 of the 6 pens, keeping 3 pens toward the entrance empty. Spray the pig pens in Section 2 and Section 3 once a day with 'W GANS water' and spray the body of pigs in Section 3 also once a day. Also feed the pigs in Section 3 with the 'W water'. Please notice it is the 'W water' and one needs to hold the water still for 6 hours, until it has no floating blue particles, and only then can use the water to feed the pigs. You can move one bucket from Section 1 to Section 3.

A: Keep spraying the pens and pigs and feed the pigs in Section 1, three times per day before Wednesday.

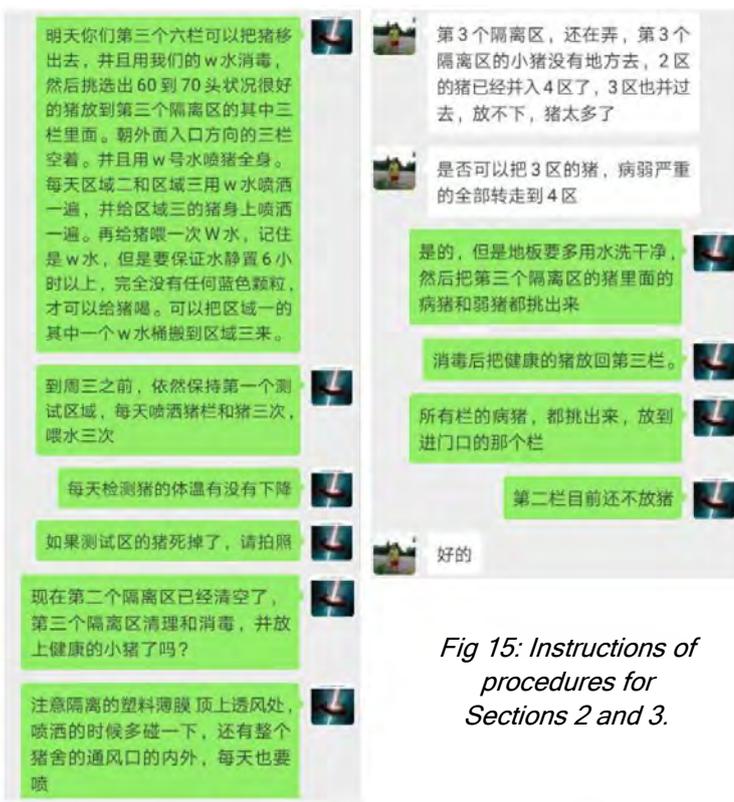

Fig 15: Instructions of procedures for Sections 2 and 3.

(A)

(B)

A: Everyday, check if the temperature of the pigs dropped.

A: If any pig dies in the test area, please take pictures.

A: Now the second isolation section is empty. Is the third section cleaned and disinfected and the healthy pig put back?

A: Pay attention to the top of the plastic film where the air can come in, spray more times, and all the ventilation openings also need to be sprayed every day.

B: The third isolation section, we are still working on it, but those pigs in Section 3 have nowhere to go, because the pigs in Section 2 are already moved to Section 4. If we move all the pigs from Section 3, it is too much, cannot put into.

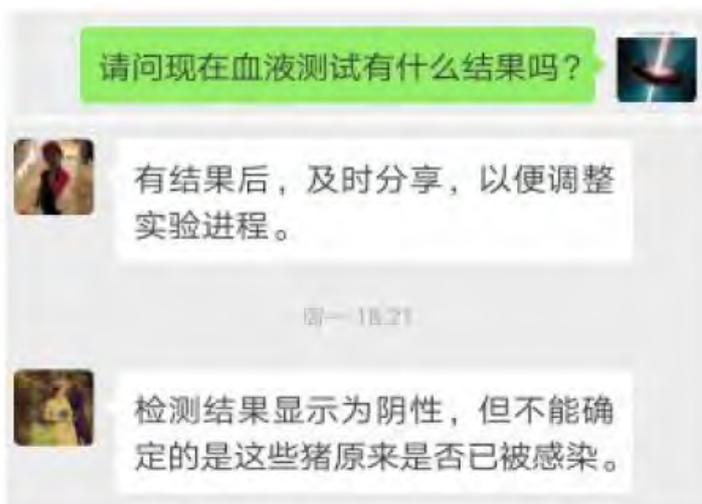

B: Can we move all the sick and weak pigs from Section 3 to Section 4?

A: Yes, but the floor needs to be washed with water, then pick out all the sick and weak pigs in Section 3 and move to the sick pen and send those healthy pigs back into Section 3 after disinfection. Do not put any pigs in Section 2 now.

The remaining pig pens, pigs of which were not given or sprayed with any GANS water, were called Section 4. The only process of keeping the spreading of the virus under control was spraying of the central corridor area with the 'W GANS plasma water'. This proves that a change to the environment can prevent the pigs from getting infected, only by breathing and being in the environment of the fields.

On 21st Jan, the lab test result of the blood samples from the feverish pigs', taken on January 20th, showed negative results for African swine fever virus (Fig. 16 and Fig. 17).

The pathological test result for the pig that died in pen No.17 on the 19th of January, also gave negative for the African swine fever virus.

May I know the test result of blood?

Please share the test result in time after it comes out, as a reference to adjustment of the test process.

The test result is negative, but we are not sure if those pigs were infected originally.

Fig 16. Confirming the blood test result is ASFV negative.

Is the blood taken from the pigs which had their temperature tested before and confirmed had the fever before?

Those pigs had been tested, test result is negative.

Fig 17. Confirm the blood test, taken from the pigs that had fever before, was negative.

On January 21st, there was no death in the test area Sections 1 and 3. Seven pigs died in Section 4 and 12 died in the sick pig pen. The whole pig farm was fed with 18 packs of food. Section 1 was fed with 3 packets of 40 kilogram per pack.

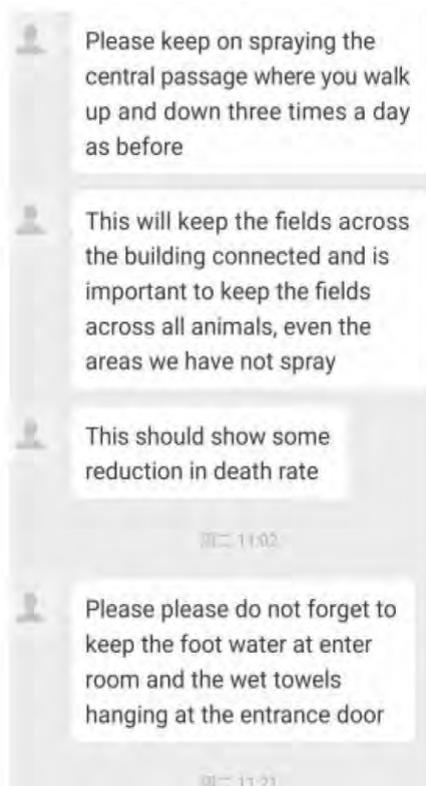

4.3.4 DAY 4

On site

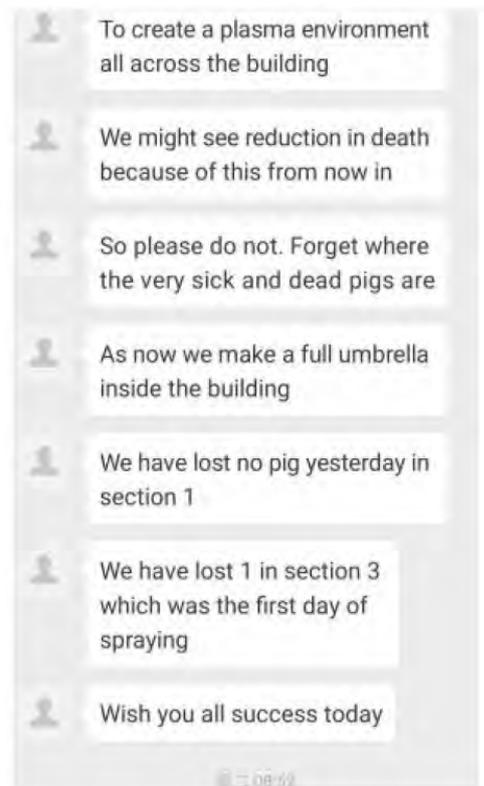

On January 22nd, the principle of the process was further explained to the company (Fig. 18. - A, B, C).

(A)

(B)

(C)

Fig 18. Explaining the principle of the process.

A wet towel soaked in the 'W GANS water' was hang at the entrance to prevents the virus from entering. A basin was placed on the floor, and filled with the 'W GANS water', so that people on entering or leaving soaked their waterproof shoes in that water to avoid bringing the virus into or out of the pig house.

The body temperature of pigs in various sections was taken on January 22nd. In Section 1, the temperature of the pigs in pen No.17 was 41 and 40.5 degrees Celsius respectively; in pen No.18, it was 40.3 and 40.6 degrees Celsius respectively; in pen No.19, measured at 39.7 and 39.9 degrees Celsius respectively; in pen No.20 was 39.8 and 40 degrees Celsius respectively ; in pen No.21, measured at 40.4 and 41 degrees Celsius respectively; in pen No.22, it was 39.8 and 40.7 degrees Celsius respectively. In pen No.26 of Section 3, it was 39.7, 40.3, 41, and 40.6 degrees Celsius respectively. In pen No.36 of section four, it was 39.8, 40.5, 40.2, 40.8 degrees Celsius respectively (Fig 19). In conclusion, the body temperature of the pigs has not yet decreased significantly.

The farm notified that another virus - Porcine reproductive and respiratory syndrome (PRRS) virus, was found in blood samples taken on January 21s (Fig. 20.).

(4号)	40	

Fig 19: Temperature measured in different sections on January 22nd, 2019.

Fig 20. Porcine reproductive and respiratory syndrome (PRRS) virus was found in blood test.

Conversation's translation (Fig. 20):

A: The blood samples were yesterday sent for testing, we had checked for another kind of disease, called Porcine reproductive and respiratory syndrome (PRRS) virus. The test result showed positive. This disease can also cause fever in pigs.

B: Once the PRRS virus was infected by the pigs, the infection rate of blue ear disease was high. Once infected, it will spread to the whole pig farm fast. But the other virus, the infection rate is low, so it is hard to say which pigs were infected before.

Mr. Keshe: Then how we know we have overcome this.

Mr. Keshe: Is blue virus or infection

B: Blue ear disease, Porcine Reproductive and Respiratory Syndrome (PRRS), transmission through the respiratory system to get infection. B: For fattening pigs, it is mainly caused respiratory diseases and respiratory disorders. B: African swine fever mainly caused elevating body temperature, sudden death, has low infection rate, but high mortality in infected pigs. Blue ear disease has high infection rate but has a relatively lower fatality rate.

Mr. Keshe brought an explanation on the Blue ear disease from the new plasma space science point of view (Fig. 21.).

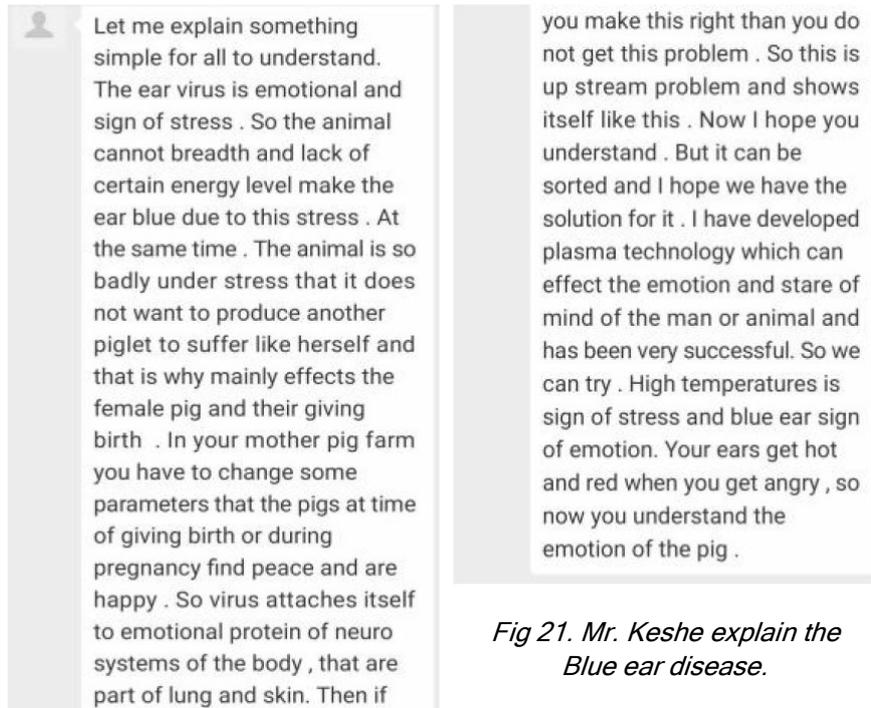

Fig 21. Mr. Keshe explain the Blue ear disease.

The process of the Blue ear disease needed another GANS water with different strength. The delivery of the new mixture of the GANS material was arranged.

On January 22nd, one pig died in pen No.20 in Section 1, and one pig died in pen No.27 in Section 3. The dead body of the pig in pen No.20 had purple color (Fig. 22.).

Fig 22. Dead pig in pen No.22, January 22nd, 2019.

4.3.5 DAY 5

On site

On January 23rd, since there was not much raw material left in the F1 GANS tank (Fig. 23.), it was suggested to divide a barrel of the W GANS raw material into two parts, and to add it to the F1 GANS raw material to enhance the effect of the GANS plasma water.

Fig 23. Levels of the F1 GANS remaining in buckets.

On 23rd of January, one pig died in pen No.20 in section one (Fig 24), one pig died in pen No.26 in section three, and one died in pen No.31 in section four.

On January 23rd, the whole group was fed 17 and a half packs, and more than 20 sick pigs were selected from the whole group of section 4 and moved to sick pen. There were about 40 sick pigs in the sick pen, most of which were alive. But there were still fever in the fourth section.

Fig 24. Pig died in Pen No.20 of Section 1, on January 23rd, 2019.

4.3.6 DAY 6

On site

On January 24th, a new barrel of F1 GANS material was delivered to the farm (Fig 25). There were no casualties in Sections 1 and 3, but 8 pigs died in the sick pen.

Fig 25. New F1 GANS material delivered to the farm on January 24th, 2019.

After transferring the sick pigs, the number of pigs in each pen was as follows:

Section 1, 21 pigs in pen No.17, 25 pigs in pen No.18, 22 pigs in pen No.19, 21 pigs in pen No.20, 25 pigs in pen No.21, 22 pigs in pen No.22, totaling 135 pigs. The total loss in this section from the start of the trial was only 4.

Section 2 was empty.

Section 3, 18 pigs in pen No.11, 23 pigs in pen No.12, 21 pigs in pen No.13, 24 pigs in pen No.26, 21 pigs in pen No.27, 22 pigs in pen No.28, totaling 129 pigs. The total loss in this section was only 2.

Section 4, 36 pigs in pen No.3, 23 pigs in pen No.4, 39 pigs in pen No.5, 18 pigs in pen No.11, 40 pigs in pen No.6, 16 pigs in pen No.7, 44 pigs in pen No.8, 16 pigs in pen No.9, 23 pigs in pen No.10, 21 pigs in pen No.30, 19 pigs in pen No.31, 17 pigs in pen No.32, 46 pigs in pen No.33, 22 pigs in pen No.34, 22 pigs in pen No.35, 23 pigs in pen No.36, 35 pigs in pen No.37, totaling 464 pigs. The total number of pigs in the whole farm was 728.

The total loss of pigs in 8 days from the onset of the virus was 101.

	728头														

Fig 26. The number of pigs in each pen after removal out the sick pigs.

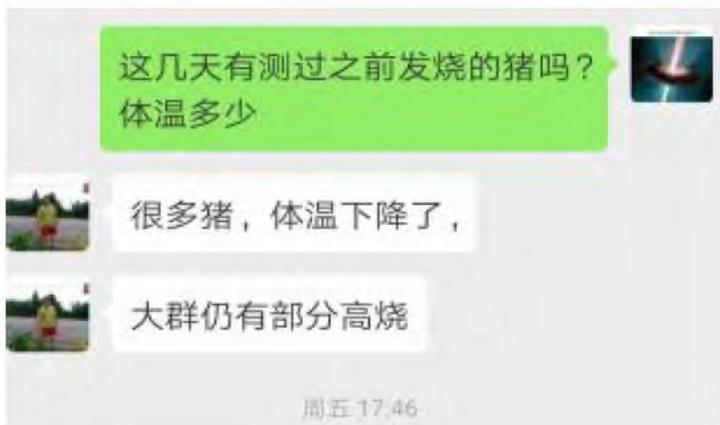

4.3.7 DAY 7

On site

On January 25th, many of the pigs showed a decline in body temperature. Six pigs were tested in Sections one and three, and their body temperature was normal, but some pigs in Section four still had fever.

Only GANS water was used and no antibiotic in the section one and the section three and the sick pen and the section four were given antifebrile, Carbamazine calcium and Amoxicillin.

On January 25th, no losses in Section one and Section three, one pig died in Section four, and one died in the sick pen. The death rate has rapidly dropped.

Have you recently tested the temperature of those pigs which had fever before?

Many pigs' temperature dropped.

Some of the pigs in the big Section 4 still had fever.

Fig 27. The temperature of many of the pigs dropped.

On 25th January, the farmer decided to move one sick pig out from pen No.20 as it looked weak, walking unstably (Fig. 28).

4.3.8 DAY 8

On site

On January 26th, the Keshe Foundation team and the company manager returned to the test farm (Fig 29. - A). The whole pig farm was found to be active, the body temperature of the pigs in Sections 1 and 3 dropped and these pigs were more active than those from other sections. Some pigs in Section 4 were still feverish, and some pigs were huddled together. In the sick pen, some of the pigs were active and part of them huddled together (Fig. 29. - B, C, D, E, F).

Sample tests of two pigs' body temperature in Section 1, was 39.3 and 39 degrees Celsius. The whole pig farm stank less, and the smell was not as uncomfortable in the throat as compared to the previous visit; and workers reported that clothes soaked in the GANS water can eliminate the stink. We were told on this day, when the general manager of the subsidiary returned to work on January 20th, he tested his clothes and found no virus on it.

On January 26th, two pigs died in sick pen and one died in pen No.12 in Section 3.

*Fig 29.
Returning
back to the
farm on
January 26th,
2019.*

(A) Mr. Keshe on site.

(B) Pigs in Section 3.

(C) Pigs in Section 1.

(D) Pigs in Section 4.

(E) Pigs in Section 4.

(F) Active pigs in the sick pen.

Fig 30. The farm company asked for help in eliminating the Blue ear virus.

Laboratory tested the tissue taken from the dead pig in pen No.37, it was Blue ear virus positive and negative for other viruses (Fig 30).

Keshe Foundation explained to the farm that the strength of the Blue ear virus is different from the African swine fever, and the formula of plasma water needs to be remade, as animals treated with plasma water may still have weak viruses in their bodies. But because viruses are weak, pigs don't show any symptoms, as if they were vaccinated (Fig 30).

4.3.9 DAY 9

On site

On January 27th, a new mixture of 'F2 GANS material' for the processing of the Blue ear disease, was delivered to the farm (Fig 31. - A), to be applied to those sick pigs in Section 3, pen No.20 in Section 1 and the pigs in the sick pen in Section 5; mainly targeted to eliminate bacterial infections caused by the Blue ear disease. The pigs in Section 5 were fed with the new 'F2 GANS water' and the 'W GANS water' separately (Fig 31. - B).

On January 27th, for the first time no death in the whole pig farm was recorded, including the sick pen.

This shows the correctness of the analysis of Mr. Keshe, that by using different mixture of GANSes on the farm, both Blue ear virus and bacterial infection can effectively and immediately be eradicated using the GANS plasma water.

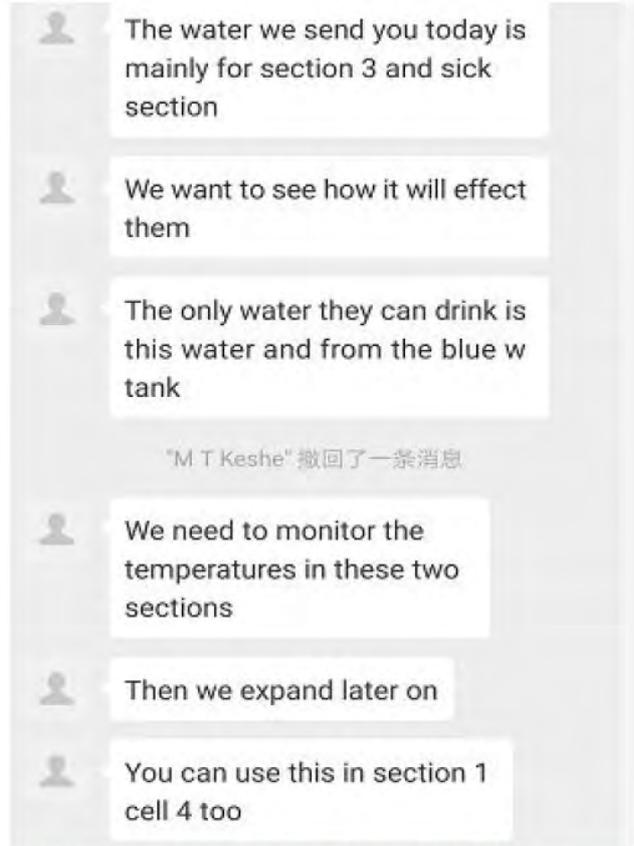

Meeting at the headquarters of the farming company

Due to the successful results in the first week of eradicating African swine fever, on January 28th the management, the director, and the Chairman of the national organization owning the farm, asked for an immediate meeting with the Keshe Foundation representatives (Fig. 32).

In that meeting, it was agreed that the GANS water was effective and they would like to go to the next phase of applying the GANS water as prevention in a specific farm which held 1000 mother pigs. Some of the pigs were already ASFV-positive and the GANS plasma water material was to be delivered directly to the mother pig farm in that week.

(A) New F2 GANS material delivered.

(B) Instructions for applying F2 GANS water.

Fig 31. The new F2 GANS material applied for the Blue ear disease on January 27th, 2019.

Fig 32. Mr. Keshe visiting the pig company headquarters.

The translation of the writing on the LED panel:
"Fight against African swine fever, win the aggressive war of African swine fever".

4.3.10 DAY 10

On site

On January 28th, two slim and weak pigs died in the sick pen (Fig 33), and one died in Section 4. The 'F2 GANS water' was fed to the pigs in pens which had dead pigs or pigs with the disease.

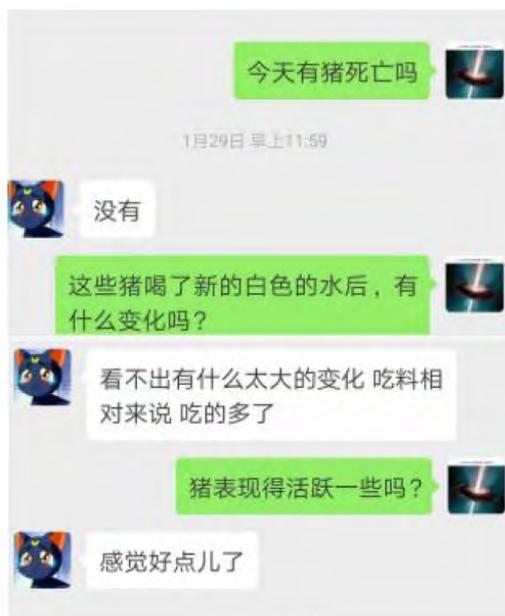

Fig 33. Two slim pigs died in the sick pen, on January 28th.

4.3.11 DAY 11

On site

On January 29th, no death was recorded in the entire pig farm. After drinking the new 'F2 GANS water', pigs started to eat more food, and the pig farm showed more activity.

Are there any dead pigs today?

No

Is there any change after those pigs drank the white GANS water?

Not much changes for now, they eat more compared to before.

Are those pigs more active?

Look better

Fig 34. Pigs became better after being fed with the new F2 GANS plasma water.

4.3.12 DAY 12

On site

On January 30th, pigs with lung problems and breathing difficulties were moved from Section 4 to pen No.31 (Fig 35) and were fed twice a day with 'F2 plasma water' to see if the breathing improves.

Fig 35. Pen No.31 with pigs having lung and breathing problems.

The body temperature of the whole group of pigs was examined (Fig 36).

In Section 1, the body temperature of one piglet in pen No.17 was 39.61; the body temperature of one piglet in pen No.19 was 39.71; the body temperature of one piglet in pen No.21 was 39.628.

In Section 3, the body temperature of one piglet in pen No.12 was 39.4; and the body temperature of one piglet in pen No.28 was 39.6.

In Section 4, the body temperature of one piglet in pen No.33 was 39.7; the body temperature of one piglet in pen No.34 was 39.3; and the body temperature of two piglets in pen No.35 were 39.6 and 39.5.

The body temperature of two piglets in sick pen No.37 were 39.7g and 39.8, respectively.

The body temperature of the whole pig farm was between 39.5 to 39.7. The pig farm was more active, excited, and ate more. Pigs were fed 21 packets a day, which is half a kilogram less than their standard diet.

Section	Pen No.	Temp 1	Temp 2
4E	37#	39.7	39.8
	35#	39.6	39.5
	34#	39.3	
	33#	39.7	
3E	28#	39.4	
	12#	39.6	
1E	19#	39.6	
	21#	39.7	
	17#	39.6	

On January 30th, one pig died in sick pen. The whole pig farm was stable, and a few slim pigs were not yet in a good condition.

Fig 36. The temperature of the whole pig farm dropped on January 30th.

4.3.13 DAY 13

On site

On January 31st, no casualties were recorded in the pig farm, an increased food intake was observed, and the farm was stable. Although pigs' body temperature was slightly higher, there was a significant improvement as compared to the previous period. If there was no death in the next three consecutive days, the test case for this period could be closed (Fig. 37).

Are there any dead pigs today?

No,

The feeding also increased.

This pig herd should not have big problems now. Getting stable, although the temperature is still a little bit higher, but had a significant improvement compared to before.

Fig 37. The whole farm had no dead pigs and improved significantly, January 31st.

4.3.14 DAY 14

On site

On February 1st, no pigs died.

4.3.15 DAY 15

On site

On February 2nd, no pigs were found dead, and the health of the piglets improved after applying the 'F2 plasma water'.

4.3.15 DAY 16

On site

On February 3rd, no pigs died. Pigs in the sick pen also gradually recovered from the ASF and the PRRS disease. The first stage of the trial was considered to be completed both by the Keshe Foundation and the owner of the farm and it was agreed to for the farm to be observed on weekly basis.

A new addition to the process

A new GANS material was sent to the farm to start another stage of recovery testing. This new GANS plasma water called 'F3 GANS material' was only given as drinking water to pigs in Section 1 of the pig farm, to accelerate their growth. Then, it was agreed that the 135 pigs in Section 1 will continuously be fed with the 'F3 plasma water' to test the effects of the 'F3 plasma water' on the growth of animals. The aim was to monitor and compare the weight increase of pigs in the Section 1 as compared to those in Section 3.

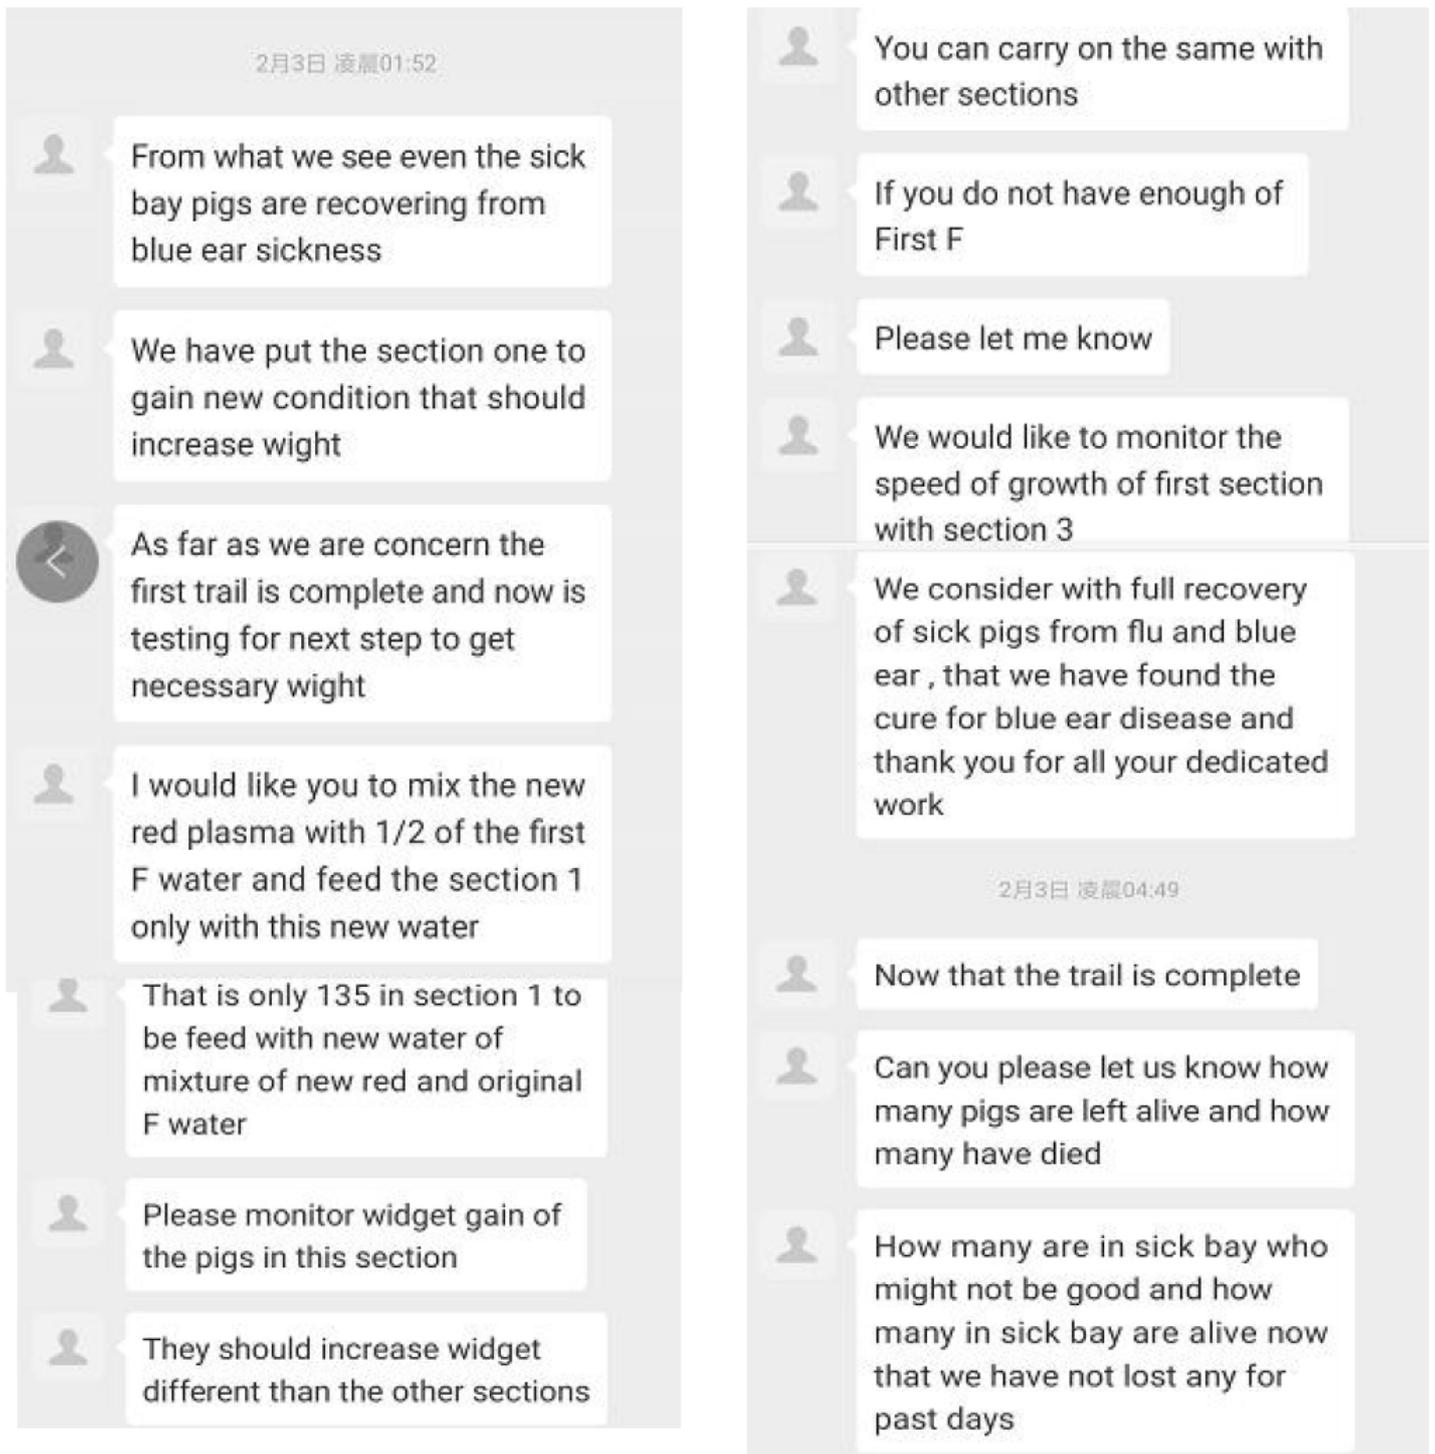

Fig 38. Confirmation of the end of a trial and to carry out an additional test.

5. COMMERCIALIZATION OF REVERSAL AND PREVENTION

Following the meeting at the headquarters of the farming company on Monday 28th of January by the invitation of the chairman of the company and discussions with the management in the presence of the professor appointed by the government, the effectiveness of the trial was acknowledged and it was agreed to start the prevention program for the rest of the infected pigs, within the company farming organization. The directors of the company placed a consultancy order (Fig 39) for the already infected mother pig farm and the order was placed to the Foundation for the delivery of the GANS plasma water. The material was delivered to the infected farm on 3rd of February 2019. The instructions on how to apply the GANS water were sent to this mother pig farm also on that day (Fig 40).

Fig 39. The consultancy order placed by the farming company to the Keshe Foundation

Fig 40. The Instructions given to the mother pig farm.

6. OBSERVATIONS FROM THE TRIAL

To prevent the new virus from entering the pig farm or spreading via the ventilation system, entrances and waste ports of the animals need to be continuously disinfected, and so a wet towel soaked in the ‘W GANS water’ was hung at the entrance, and a basin filled with the GANS water was placed on the floor. When one enters or leaves, their waterproof shoes are soaked in this water to avoid bringing the virus into or out of the pig house. Hanging wet towels together with the GANS water in the basin on the floor, form a plasma field that prevents the virus from entering the farm.

The table in Fig. 41, shows the daily records of pigs death. The green area is the Section 1. The blue area is the Section 2, which was emptied on January 20th to form a buffer section. The yellow area is the Section 3; the pink area is the Section 4; the red area is the sick pen, Section 5.

Fig 41. The death rate of pigs.

As recorded on the chart, pigs in the pig farm started to die from January 17th, and the virus spread fast in the various pig pens. Since the implementation of the plasma solution at 2pm on January 19th, a significant reduction in mortality was observed. In total, there were three deaths in Section 1 and four in Section 3, since the start of the process. Allowing for the already badly effected animals the gap of 72 hours to be affected by the GANS water and understanding that the virus has mutated there has been only two death in Sections 1 and 3.

A large number of deaths occurring in pen No.3 were attributed to the adjacency of pen No.2, where all the dead pigs were placed before being buried on daily basis. As there was no other place to pile up the dead pigs, this resulted in a large number of infections and deaths in pen No.3. Hence, any dead pigs should be quickly moved out of the pigsty.

On January 19th, the body temperature of pigs was mostly between 40 and 41 degrees. Starting from January 25th, the body temperature of pigs in Sections 1 and 3, which are the test areas, began to drop to around 39.5, while pigs in Section 4 were still in a state of high fever, above 40 degrees. Only plasma water was been applied in Sections 1 and 3 and no medicine were given in Section 1, during the trial. The pigs in Section 4 were not fed any plasma water directly, and only its environment changed due to the spraying of the central corridor. Sections 3, 4 and 5 were administered antifebrile Carbaspirin Calcium and the antibiotic Amoxicillin. This supports the conclusion that the plasma water solution was more effective than antifebrile and antibiotics.

After a new plasma formula for Blue ear disease was made available on January 27th, the body temperature of all pigs, including those in the sick pen, on January 30th, dropped to 39.5 - 39.7 degrees Celsius. For 10 consecutive days, from January 31st to February 9th, zero death rate was achieved.

The food intake of the whole farm increased from 14 packs on January 19th, to 21 packs on January 30th, and further increased to 30 packs per day on February 10th.

On January 20th, the animals were fed only 3 packs of food and on February 2nd, this increased to 7.5 packets in Section 1.

On January 19th, upon entering the pig house for the first time and wearing the protective clothing, the Keshe Foundation representatives were told that the smell of the pig house would stay on their clothing and body for three to seven days, and hence were advised to cover their bodies as much as possible. On entering the pig farm building, the smell was so strong that caused breathing difficulties for the Keshe Foundation team, as they were not used to such a strong smell.

After leaving the pig house on the January 19th, the CEO and general manager explained that all their pig houses experienced the problem of the strong odor. The clothing of the Keshe Foundation team, even after washing still carried the smell of the pig house. On the second visit of Keshe Foundation team to the pig house, which took place one week after the start of the spraying of the pig house with the GANS plasma water, the intensive smell was gone. Upon leaving the pig farm on January 26th, the Keshe Foundation team traveled back to Beijing by train, and one could not smell any pig odor on their clothing or their body. This shows that the entire environment of the pig farm changed as a result of the use of the GANS plasma water. Hence, the GANS water can be used as a disinfectant and odor controller in pig farms. By spraying plasma water in the environment, the strong smell of pig house is removed, and a healthier and more comfortable working environment is created for the benefit of the staff.

7. CONCLUSIONS

African swine fever, before carrying out these three trials, was not considered to be reversible or preventable. The first trial was done on one pig, the second trial of 30 pigs and the third trial covered 829 pigs at different stages of infection. The application of the new space plasma technology demonstrated a new breakthrough in detection, prevention and reversal of viruses.

For the first time, we understand the mechanism of viruses and how they link to proteins and human and animal cells. Through the Ebola trials in Sierra Leone and now the African swine flu trials in China, it is evident that a new breakthrough in knowledge has been achieved.

With the recent progress in space technology, Nano technology and plasma technology, Mr. Keshe sees a new frontier in the world of science in the area of health, for reversing illnesses through the application of the new GANS plasma technology.

Mr. Keshe believes, that using the new plasma field systems, which are CE certified by the Keshe Foundation in Europe, can be the next step in the overall eradication of the virus from the environment, human body and animals, what can be introduced in further trials and thus making the application of the new technology much easier and more affordable.

The agricultural test trials in the central Mongolia, demonstrated that the environmental change using the GANS plasma water can be highly effective, and financially affordable for the farming community worldwide.

Before the start of this trial, the laboratory of the pig farm confirmed the presence of the African swine fever virus. This was the reason why the government officials and the company invited the Keshe Foundation to run a large-scale trial on their farm.

It has to be understood that at the present time in China, no authorities or private organizations are allowed to be anywhere near the reported ASF-infected area.

This trial not only demonstrated that the virus can be reversed but at the same time it can be controlled not to spread to the rest of the animals in the farm. From now on, there is no need for mass slaughtering of all the animals in the infected pig farms.

Therefore, based on these three trials and the subsequent 1000 prevention trial started on the 3rd of February, the Chinese government authorities and the worldwide farming community now has a new tool to overcome all the viruses - not only concerning pigs, but also birds or any other animals.

At the same time, the Ebola trials in Africa demonstrated that even viruses carried by humans can be eradicated using the new GANS plasma technology.

The discovery of the new GANS plasma technology and its application in health and farming is considered to be as important as the discovery of penicillin in the last century.

It is important to notice that immediately after applying the GANS plasma water, all the blood samples and pathological analysis did not detect any African swine fever virus in the pig farm. This fact demonstrates the rapid effectiveness of the fields of the GANS plasma water, as within hours of application in the farm, the virus was no longer detectable in the blood samples.

For the first time we show the conversion of double strand DNA to a single strand RNA in the same spectrum of the virus strength, which demonstrated that viruses can mutate but need to cross between the memory and the physicality part of the DNA - something which was never observed in the scientific world before.

Therefore, for the first time, we can observe mutation of viruses and can see the pathological effect of viruses on animals and human cell, through this method of evolution through the strength of the fields of the environment or a cell, and not through the DNA structure.

This new understanding needs further research and development by the scientific world to better understand how viruses can affect the DNA and through their strength spectrum cross into RNA and back, to attached themselves at a weaker strength to another DNA structure.

This confirms the answer to a number of questions, as the stronger strand of the virus has the strength of the hydrogen element of the DNA protein, and due to a large energy gap between the two, this large energy can dislocate the hydrogen structure of the protein. This leads to the fast destruction of the cells and the release of high energy which manifest itself as a high temperature fever that destroys the protein structure. After the virus strength is removed by the GANS plasma water, it leaves a large number of damaged cells, which lead to the second infection and the second fever.

The detection of the Blue ear virus right after the application of the GANS plasma water on the ASFV-positive pigs, where this virus was not observed prior to the application, supports the scientific explanation of this phenomenon by Mr. Keshe. African swine fever virus is a large envelop of a double-stranded DNA virus, where the spectrum of the fields of the strand have different strength. Hence, the use of the first type of the GANS plasma water destroys the stronger viral strands, and then the weaker strand takes over.

It has to be noted that due to Mr. Keshe's understanding of the totality of the work of the GANS plasma fields, he deliberately moved all the sick pigs to pen No.37, having them sprayed on daily bases and fed with the 'W GANS plasma water'. This created a full coverage for neutralizing the field of the viruses in the building, by linking the field from pen No. 37 through the central corridor connection, through the application of the GANS water in Sections 3 and 2, all the way through to Section 1. This created an internal umbrella, covering all the pigs in the big farm with the GANS plasmatic field from the third day.

The use of the new GANS plasma technology, brought the total death rate down and eventually eliminated both viruses, the ASFV and its mutation to the PRRS, and thus saved over 728 pigs, that otherwise would have been slaughtered.

Consequently, this brought the savings of tens of thousands of dollars to the farmers. Each pig is sold for about 10 RMB for half kilo and each pig at the point of sale weighs on average 120kg, giving a revenue of around 2400 RMB per pig and total savings of 1,747,200 RMB (divided by 6.7 RMB per dollar, preventing a loss of around 260,776 dollars).

It has to be mentioned that the GANS water tested by laboratories in Austria, have shown to be many times more powerful than any presently known antibiotics. The certificate for this test is in possession of the Keshe Foundation.

It can be concluded, that the GANS plasma water is an effective way to control animal viruses and infections and it brings a major breakthrough to the animal husbandry.

This trial has shown that if the government allows a period of 14 days for the farmers to apply the GANS plasma water, the virus can be eradicated thus saving the pigs from the mass slaughtering, as it is the present practice recommended by the government. We advise and recommend to the government, to allow the infected farms to take charge and control in eradicating the virus, thus giving them a chance of saving their animals.

The agricultural test in China, has demonstrated that the GANS plasma water does not bring or cause any genetic change or modification, and the same applies to the effects of the virus on animals upon application of the GANS plasma technology.

The Keshe Foundation plasma technology is safe as it is based on naturally produced materials that are not derived from any chemical substances that can be hazardous to the environment. Therefore, there is no need for an FDA approval of such natural products, developed as part of the Keshe Foundation new space technology.

In conclusion, we can say that the Keshe Foundation has achieved its targeted, as requested by the Chinese government authorities to find a final solution to this economic disaster, which has affected the farming and national food security from the Western Europe to the East Asia.

The Keshe Foundation can proudly say the mission of overcoming and preventing the African swine fever virus is accomplished together with delivering the means for containing the virus to reduce its spreading.

APPENDIX A

THE FIRST PIG TRIAL

Author: M.T. Keshe 28th of November 2018

Keshe Foundation plasma technology resolves the African Swine Fever problem in China

Subject

The main purpose of the space plasma technology developed by Iranian nuclear scientist Mr. Mehran Tavakoli Keshe is to free man from the restrictions of energy, water, food, oxygen, medicine, and so on, to travel and live freely in space. In space-medicine, plasma technology can protect humans from all kinds of space viruses, because in space there are only viruses, no bacteria as in space there are no amino acids, and viruses are essentially energy packs that attach themselves to proteins.

This was never understood by the present science and that has been the reason why we could find no solutions for viruses. With this new understanding and explanation of the true knowledge of viruses by M.T. Keshe, now we can solve all problems with viruses worldwide, regardless of any strand of viruses or its strength. This is the major breakthrough which brings a new horizon to the life of man on this planet and in space. The discovery of the true process of creation of viruses and life of virus and its solution with the simple use of plasma water developed by M.T. Keshe, now ends the period of man becoming ill from viruses and these heralds a new beginning in the world of medicine.

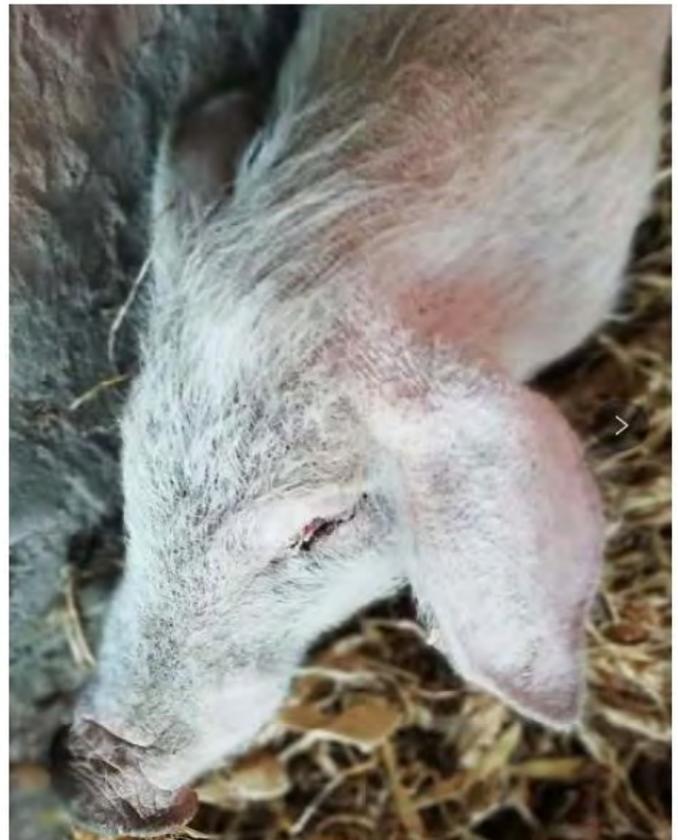

Viruses are the greatest threat to the life of man in space. The processing of African Swine Fever virus is the best verification and confirmation of M.T. Keshe's plasma technology.

African Swine Fever is a disease transmitted by an arthropod (soft ticks) carrying the virus, after biting pigs. Typical symptoms after infection in pigs are flushing skin and extensive visceral bleeding. African Swine Fever virus has three classifications: virulent strain, medium strain, attenuated strain.

Pigs infected with virulent strains have obvious clinical symptoms and may have a mortality rate of 100%. If infected with medium or attenuated strains, pigs may be resistant to the infection, or they may have almost no clinical symptoms, and they will only show antibody positive reactions when testing the serum.

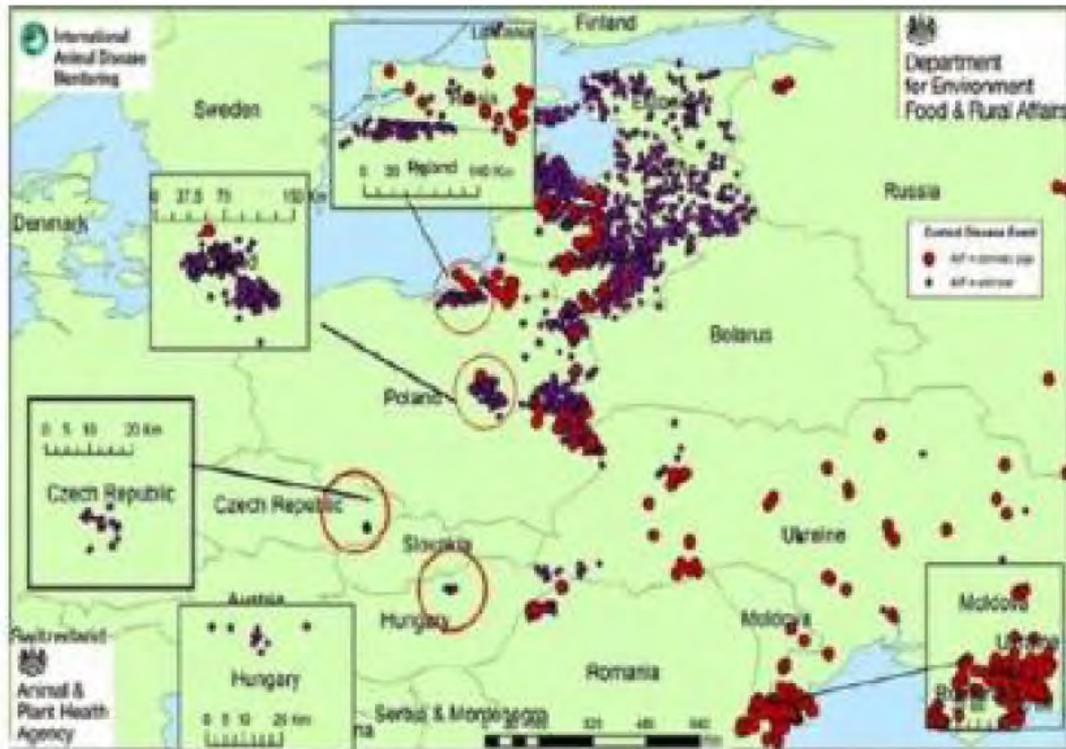

African Swine Fever has been a global threat since it was first discovered in Kenya in 1921. Since its arrival on the Iberian Peninsula in the 1950s, the African Swine Fever epidemic has maintained a trend of eastward expansion from the European continent, and the spread rate of the variant virus has been even more alarming since 2007.

Since about a decade ago, the African Swine Fever (ASF) has spread rapidly in Russia, Ukraine, Poland and other Eastern European countries, with more than 5000 outbreaks in a decade. This has resulted in significant losses in the livestock industry of all countries, as can be seen from the experience of Russia alone.

In 2017, Russia culled as many as 2 million pigs, accounting for nearly 1/10 of all raised meat pigs across the country. In the past decade, Russia's direct economic loss from pig deaths alone amounted to 70 million USD, and the indirect economic losses were even more incalculable. What is more frightening, however, is that Russia has paid a huge price, but the epidemic has not been eradicated.

Unfortunately, the swine fever strain found in Irkutsk, Russia, in July was found in problematic pigs in northeast China. Since August 2018, African Swine Fever has been introduced into China from Russia and has spread rapidly in China from the northeast. At present, there has been a full-scale outbreak in more than 20 provinces and cities throughout the country, and more than 500,000 pigs have been slaughtered. However, the spread of the momentum has not slowed, every day there are new outbreaks. Most importantly, there is no vaccine inside and outside of China to immunize and no medicine to treat the disease.

▲ IDM (International Animal Disease Monitoring)

Picture source: http://www.sohu.com/a/277610572_212351

Method

The newly developed plasma technology developed by Mr. Keshe of Keshe Foundation, which originally was tested by the scientists of South Sierra Leone university on Ebola and showed 100% effectiveness of the technology by eradication of the virus is now applied to the swine fever.

The new space plasma technology uses plasma water to rapidly release the virus's energy pack, eliminating it within a short time. During testing in Austria, the plasma water that was produced showed 10 times more germicidal action than any antibiotic available in the world of medicine today.

As early as August of 2018, when the outbreak of African Swine Fever started in China, Mr. Keshe was very concerned and recommended to apply the new space technology know-how to help China solve the problem. However, because this technology is too advanced, despite contact with relevant departments, the relevant personnel understood the application and implication, but did not report to the higher

authorities. Containing outbreaks of swine fever is entirely government-led. Once discovered, the whole outbreak area of swine fever is under martial law and all pigs are slaughtered as there has been up to now no solution. So, it has been difficult to find sick pigs for field testing.

By the request of Mr. Keshe from the Keshe Foundation to help to eradicate this national problem, which is endangering the national food security in China, the followers of Keshe Foundation in China started to look for small farmers who could have animals which had caught the virus, so that the new plasma technology could be tested. In this process, a pig affected by this disease was located in mid-November and the plasma water newly developed by M.T. Keshe was shipped to the location on 22nd of November 2018. On Friday morning of 23rd of November, the first plasma water was fed to the pig.

Within the first 12 hours, the pig shows a clear first stage of recovery, and the second day was fed for the first time with cooked food which she refused to eat since affected. By the third day, the ears have risen from the folded position. By the fourth day, after three months, the pig produced the first excrement. From the outset of starting this process, Mr. Keshe explained to the farmer that the only way we know the virus has cleared out of the body, was if the pig produces the first excrement. That shows the body has gone back to the full operation and the virus is eradicated. This proves the correctness of applying the new plasma water for the eradication of the virus.

Test process

The farmer reported that an outbreak of African Swine Fever began in the village in mid- August, with more than half of pigs of the families in this country suffering from swine fever disease, while other sick pigs all died or have been killed.

The farmer raised a total of two pigs, all had the symptoms of fever, no eating food, black and dry hard stool. One died on 19th of September 2018 and buried. The other pig, which did not eat food, just drank some water. Occasionally ate a little raw cabbage or radish. After more than 3 months, weight from more than 200 half kg fell to less than 120 half kg, dying, barely surviving.

Application

On 22nd of November 2018, the farmer received the plasma products sent from Keshe Foundation. The farmer diluted the plasma material with water at the ratio of 1:10, and then he used only the pure water on the surface of the residue of the mix. The farmer used this water to clean and disinfect the pigsty on the morning of the 23rd of November, and also fed the pig with plasma water and sprayed the body parts. As the pig was kept in open pigsty, the local temperature would be as low as minus 7 degrees at night, and the pig was very weak. At first, they only sprayed plasma water on the pig's stomach. The next day, the

Figure 1. The picture of the pig before processing on 22nd of November 2018.

pig's back was sprayed with the plasma water, and the third day, the pig's head was sprayed with the plasma water, thus preventing the pig from being too weak to bear the cold.

After one day of drinking the water, on the evening of the 24th of November, the pig ate two bowls of rice for the first time in three months. In the evening, the pig began to gather the grass to make its own nest for the first time. On the 25th of November, the pig ate noodles and rice once each, and the pig was more active. The pig began to defecate for the first time in three months since the beginning of the disease, on the 26th of November, excreting red stool. Farmer was instructed to disinfect the stool with plasma water and bury it. Defecation means that the virus in the pig's body was cleaned out, and the body function begins to recover. On the 27th of November, the pig asked for more food, five times, two bowls of rice each time, and defecated a smooth red stool.

On 30th of November 2018, the pig defecated normal black excrement and the water boils on the skin fell off. Figures 2 - 8 document this process.

Mission accomplished!

Figure 2. 23rd of November 2018, pig drank plasma water and ate cabbage.

Figure 5. 25th of November 2018, pig ate rice and noodles.

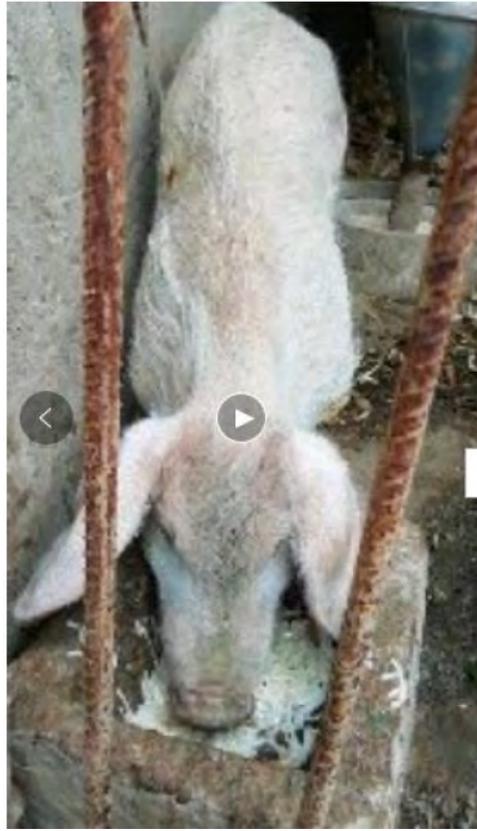

Figure 3. 26th of November 2018, pig ate cooked food.

Figure 4. 26th of November 2018, pig excrement for first time in three months (sign of recovery).

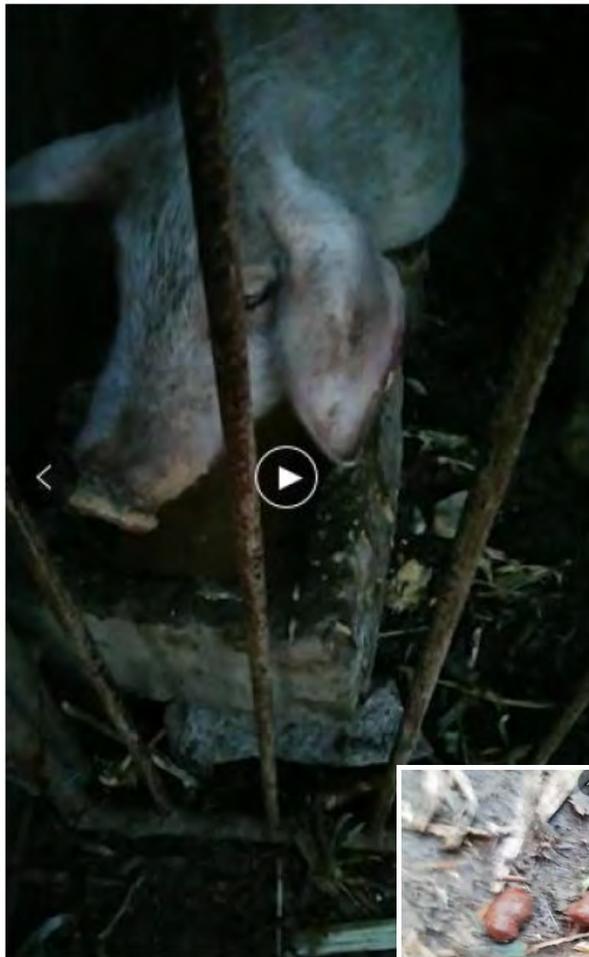

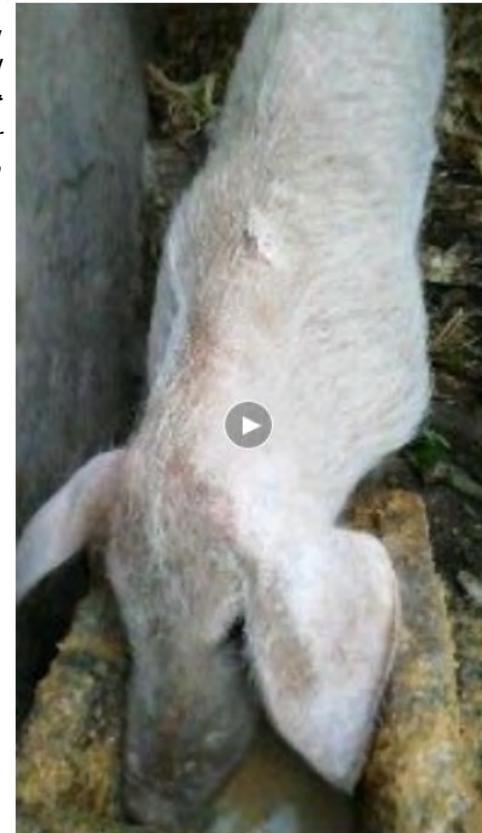

Figure 6. 27th of November 2018, pig asked for food 5 times, ate 2 bowls each time.

Figure 7. 27th of November 2018, pig defecated red and smooth excrement.

Figure 8. On 30th of November 2018, the pig defecated normal black excrement and the water boils on the skin fell off.

Observations

The whole process lasted 7 days. It took 24 hours to see eating, recovery and other signs of improvement. The process is also very simple and easy to apply. Farmers only need to spray pig houses with plasma water, give water and spray the pigs.

The cost of this process is very low, that can save the animal. And this process from now on can be used for all types of virus infection for birds, animals and humans as it is a product of nature and it is not chemically produced. This is the way the universe energy is transferred and now we understand that the virus is an energy pack attached to microorganisms, bacteria and amino acids.

Now by using this new plasma technology which is the natural plasma magnetic fields process, the energy pack of the virus is transferred and so depleted from the cell of the animal and the health of the animals or humans return back to normal.

This is the major breakthrough in the world of science and the first step for man to start to be able to handle any energy packages which might endanger the life of man in the space.

In the vast rural areas of China, there are many poor families. Pigs are the only source of the meat and the main source of income for a family. If pigs die of illness or are killed directly, the family falls into trouble again, and some families return to the edge of absolute poverty. His Excellence President Xi's task of overcoming poverty will face more challenges. As the spread of disease and mass killing of pigs has caused a disastrous blow to China's animal husbandry industry, with heavy losses on farms that will have a major impact on China's economy and Chinese national food security.

The space plasma technology developed by the Iranian physicist M.T. Keshe of the Keshe Foundation, is simple and can quickly eliminate the virus in a very short time. Prevention and treatment can eradicate the spreading of the virus.

The processed pigs are immune to recurrence. The Plasma technology can provide a cheap, simple and fast solution for solving the problem of swine fever in many countries. It can be proven that even the slaughtered meat of the contaminated animals can be washed or processed with the same plasma water for the virus to be removed from the meat before entering the food chain.

We look forward to this advanced technology being adopted and promoted by the government as soon as possible, in order to solve the urgent problem.

Thank-you letter from the farmer

Page 1

Two pigs in one yard, did not eat, had fever and defected black round excrement. They got sick in the middle of August. One pig died on 19th of September and we buried it. The remaining pig just drunk water and ate little cabbage and radish to survive. The weight of the pig dropped from more than 200 half kilograms to 120 half kilograms. Until 22nd of November when the GANS material was received. We start to feed the pig from 23rd of November, diluted the material at 1:10, fed the pig and sprayed on the body of the pig. In the night of 24th of November, I fed her two bowls of rice and she started to eat. I fed her in the morning and at night. The pig felt hungry and started to ask for food. The pig started to defecate, and the excrement are color of rust. The pig is in recovery now.

Page 2

Thank you for sending us the GANS material to save this pig. (The address and the name of the farmer are intentionally marked black.)

Written in the night of November 26th.

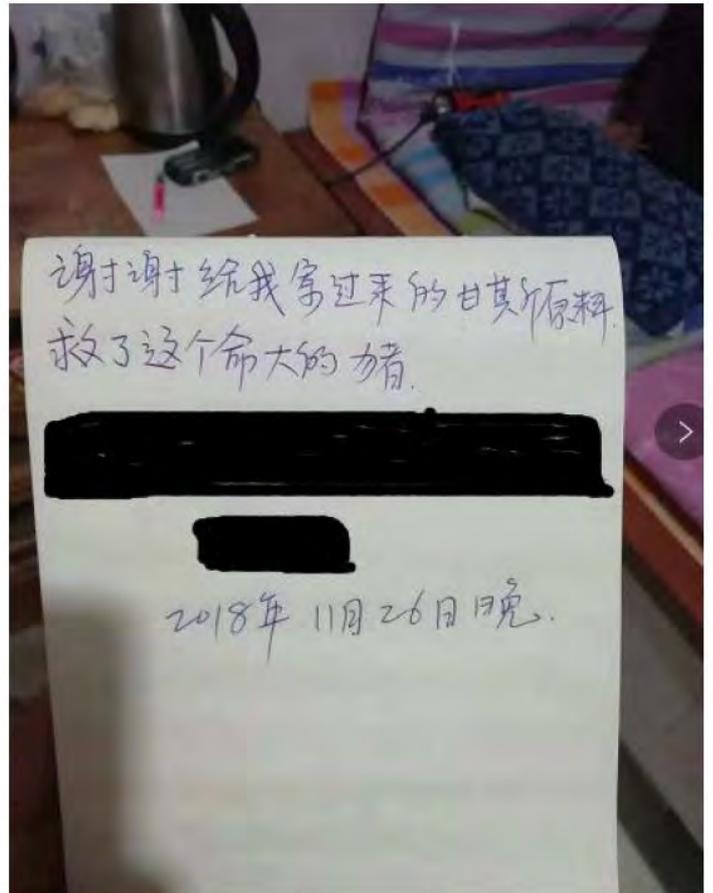

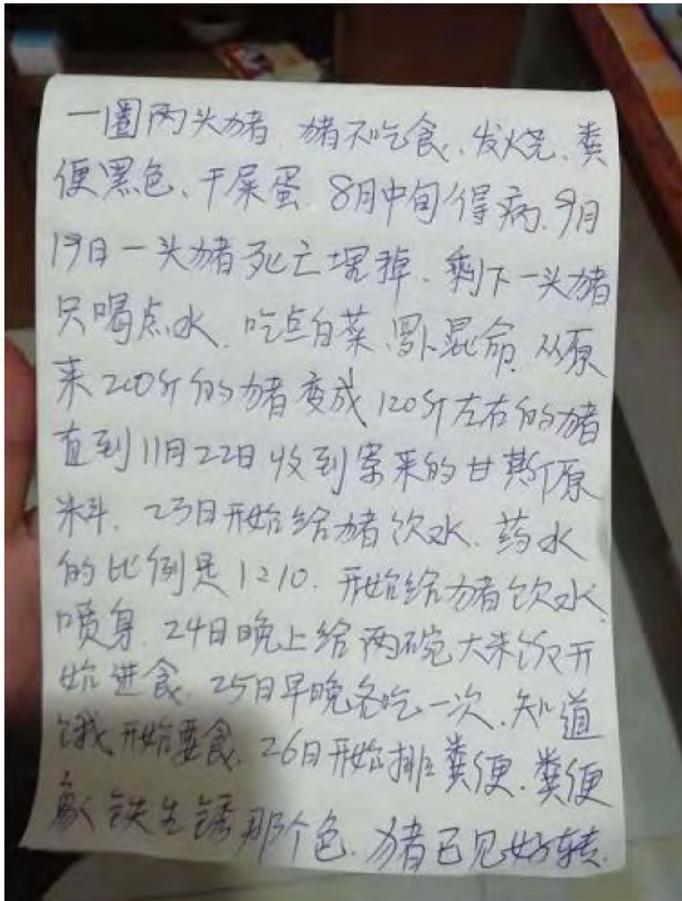

Figure 9. Thank-you letter from the farmer.

Keshe Foundation plasma technology resolves the African Swine Fever problem in China

Mission accomplished!

APPENDIX B

SECOND TRIAL INVOLVING 30 PIGS' REVERSAL AND PREVENTION OF THE AFRICAN SWINE FEVER

Keshe Foundation plasma technology: Second trial on the African Swine Fever

Trial description

Test site: 30 pigs on a private farm, owned by Keshe Foundation knowledge seeker.

Test dates: December 23rd, 2018 to January 3rd, 2019.

Test process

After one month since the first African swine fever cases were reported in the slaughter house of this area, the African swine fever has widely spread in that area.

On December 23rd, 2018, one of the neighbor of the knowledge seeker had seven pigs, two of which were seriously ill, vomiting, with blood in its excrements, with ears, nose and mouth in purple color, and unable to move (Fig. 1).

After visiting the neighboring pig house to help, the farmer went home and did not spray any GANS water on his body and then he fed his pigs. At that time, he did not take any preventative measures, such as spraying of the GANS water in his farm or feeding his pigs with the GANS plasma water.

On the morning of December 24th, 2018, one of his pigs started to vomit. Then immediately, the pig house and the pigs in it, were sprayed with the GANS water. The animals were also fed with the GANS water. The GANS water was also added to the food, before it was given to the pigs. Every six hours, the pig house and pigs were sprayed and fed with the GANS water. Pigs ate normal and during the night, stopped vomiting.

On January 3rd, 2019, all pigs were sold with a passed quarantine certificate.

Fig 1. The sick pig in the neighboring farm.

Thank-You letter from the knowledge seeker

Translation: Yesterday, we went to the farmer's house which had the African swine fever outbreak. After we came back, we did not do disinfect and fed our pigs directly. On the second morning, one pig vomited. I sprayed the pig house and the pigs with the GANS water immediately and also fed the pigs with the GANS water. Then I repeated the process every 6 hours. I did not find any vomiting in the night, pigs all ate normal.

Over the next few days, I visited several pig farms which had the African swine fever virus and even went in direct contact with pigs which were infected. I just sprayed myself with the GANS water to disinfect. When I sold my pigs, they were tested negative for the African swine fever virus.

Thanks for the GANS material provided by the Keshe Foundation.

PLASMA IN PISCICULTURE

During the past 3 years we have been studying, working and learning every day. We can bring forward the following assessments.

It all began through one friend which has spoken to me about the Keshe Foundation and the Plasma Technology, showing me videos and reactors for the GANS capturing which he was having in his own home. While receiving this information I have started to invest in zinc and copper plates, plastic recipients, and everything necessary to make my own GANS capturing kit.

In more or less 20 days I have started to see the CO₂, ZnO and CuO GANS in my first 3 reactors with which I started the experiments on the GANS capturing.

The method that I used to wash the GANSes was by extracting the GANS using a syringe and then putting it in another recipient to wash and remove the salt excess. By this method, we have the GANSes ready to start utilizing them to produce the plasma water (liquid plasma). The Plasma Water is used as sprays, bracelets, anklets,

ingesting and other applications that occurred to me. It was then when I had a very interesting experience in the area of pisciculture.

One very close friend has a fish hatchery where he is growing trout and other fish very similar to the salmon which it is raised in waters at temperatures below 21 degrees Celsius.

One day he put in one of his ponds 1000 tiny trout, of approximately 4 cm each. A week after the fish was placed in this pond he washed the largest pond which he had in the upper region

from where the other aquariums (ponds) are. It is necessary to clarify that the ponds are on a mountain and are natural ponds, in the rural area of the city. Taking advantage of the gravity, the water formed a cascade which fills other ponds in the bottom part of the land.

Around 15 days after the main pond from the upper side was washed, it caused an influx of small dirt particles and mud that passed through the main filter and reached the bottom ponds and subsequently the trout.

What he did not know was that the pond with the 1000 trout which were the smallest from all the other trout got affected by a known parasite called White Spot (*Ichthyophthirius multifiliis*). This condition caused by the known protozoa is one of the most common conditions from the aquariums.

The microorganisms which trigger the illness are so widespread that all the fishes in the aquarium (pond) have entered in contact with them at least once in their lives. However, the only fish that got sick in contact with the parasite are those which are stressed by the quality of the water in conjunction with the poor diet, affecting the smallest fishes most of all.

The dirt particles reached the pond where the small trout was, altering the water quality, therefore causing them stress, to begin with, and consequently causing the fish not to feed themselves well enough. The most characteristic

visual symptoms are the white spots on the body of the trout, especially on their gills. In addition, the infected fish show nervous behavior

and swim much faster trying to remove the discomfort from their skin. When the condition advances so far, the fish become more and more irritated and begin to rub against the objects, the walls, or the gravel of the aquarium to alleviate the itching. In the final stage, the condition can cause breathing difficulties, lack of appetite and even death in the fish population.

As a result of this contamination, in the course of 4 days, 50 to 65 trout died daily, accounting for approximately 240 fishes, until the processing with the plasma water started in the pond until trying the new alternative approach with the Keshe Plasma Science and Technology.

The processing method which was applied on the trout was by preparing 3 jars, each of them with the capacity of 2 liters and putting them in the pond. 2 of the jars were submerged at the bottom and the third floating at the surface. Each one of the 3 jars contained the plasma water of CO₂ and ZnO in the ratio of 50-50%. Each day afterward it was noticed

a decrease in the mortality rate of the fishes. From 50-65 fishes dying per day, the second day after plasma processing only 35 fishes died, the third and fourth day after plasma processing only 23 fishes died, the fifth day after plasma processing only 18 fishes died, the sixth and seventh day after plasma processing only 12 fishes died, the eighth day after plasma processing only 8 fishes died. The ninth and tenth day after plasma processing only 5 fishes died. And it continued to decrease until they reached 0% fish mortality rate at approximately the twentieth day.

Today, 5 months after the appearance of the White Spot parasite, the surviving trout has already grown weighing approximately 1000 grams each. The fishes are much more peaceful, without any additional sign of pathological conditions and without dying.

HOST WANTED

FOR PRIVATE TEACHINGS IN ENGLISH

We are looking for volunteers to host our Private Teachings in English. This position will be a part time position. Several people will fill this position, sharing hosting duties each week. This allows 2-4 people to share hosting duties each week for our private classes.

REQUIREMENTS:

- A recent computer within the last 5 years. Windows 7, 8 or 10 or MacOS 10.9 or later system;
- Desktop or Laptop computer only. Zoom hosting from tablets or phones not acceptable;
- The latest version of Zoom installed on the computer;
- 6-8 GB of RAM or more;
- 3D graphics card recommended, but not required, most newer systems have them built-in;
- **TWO MONITORS required!** (Most systems have HDMI out. You can easily hook up a TV) ;
- Fast internet speed (Please test your internet speed at www.speedtest.net and report findings below);
- Minimum of at least 3-5 Megabit upload and 10 Megabit download. Anything less than this will hinder sharing full screen videos. Optimal is 10 Mbit up 50Mbit down or higher. The faster the better!
- Decent headset required, preferably with noise canceling microphone. (example: Sennheiser PC-151 headset) o Built-in computer microphone is only acceptable as a backup;
- KfSSI Student ID required;
- Clear understandable English-speaking voice;
- Technically proficient in running your computer and operating system with basic operation, troubleshooting and analytic skills;
- Ability to multitask or willingness to learn: opening and sharing in zoom various file types, pictures, movies and switching between them while listening to teacher & interact as host when needed and keep track of chats.

ABC

of publishing in

PLASMA SCIENTIFIC JOURNAL

A. Prepare your work

Firstly, you need to prepare. You can either document the work which has already been done and perhaps even presented by you in the testimonials meeting or website, or you can plan a new experiment. You should always be clear on what you are trying to achieve and document everything as you go (label and take pictures).

B. Write your paper

Gather all the notes and pictures together and when writing your paper put yourself in the reader's shoes. Do not assume anything but present everything from the start, explaining every aspect of the experiment, which may not be obvious, and remember that "a picture is worth a thousand words". If needed, relate to other peoples' work by referencing their articles, websites or other openly available resources. Start by downloading the Scientific Plasma Journal template and short guide for authors available at

<https://support.keshefoundation.org/faq.php?section=science-journal&qid=189#q189>

C. Upload and submit

Once finished, upload your Word, OpenOffice or PDF file onto one of the cloud or filesharing services, or even onto Facebook. Go to <https://support.keshefoundation.org> and from the drop-down menu select Plasma Scientific Journal Submissions and press Go. Through this website, you can either submit your work, ask a question or access resources and the FAQs.

Any question? Get in touch with us via
